Once set up, you can use the intuitive dashboard to pause the Internet on your connected devices, run a quick Internet speed test, set up smart parental controls and much more.

- Set up your WiFi in minutes
- Pause WiFi on any device
- Monitor your home network from anywhere
- Test your service provider Internet speed
- Track Internet data usage
- Set up separate guests network
- Protect your devices from cyber threats, block malware & more with NETGEAR Armor™
- Manage content & time online, on any device with Circle® parental controls

Multi-User MIMO (MU-MIMO)

Traditional WiFi routers can stream data to only one device in the home at a time. When multiple devices are connected to the router, each device needs to take its turn, and then wait before receiving more data. This can lead to slower network and Internet speeds. Using Multi-User MIMO technology, NETGEAR routers can stream data to multiple devices simultaneously. With MU-MIMO, your WiFi network can deliver faster throughput to every MU-MIMO connected device. That means faster downloads and smoother streaming for your devices.

Dynamic Quality Of Service

If you like gaming and streaming videos, then you'll benefit from Dynamic Quality of Service (QoS). Dynamic QoS resolves Internet traffic congestion when you have competing Internet demands at home. Dynamic QoS identifies your online activities by application and device, and then utilizes bandwidth allocation, and traffic prioritization techniques, to automatically allocate more bandwidth to latency sensitive applications like online gaming and video streaming, while ensuring that lower priority applications continue to work.
