

ADSL2/2+

4 Ethernet Port | WiFi

The CT-5363 Wireless ADSL2/2+ Router is especially suited for IPTV applications. It comes equipped with four 10/100 Base-T Ethernet ports, one Ethernet WAN port and an ADSL2/2+ port for wired connectivity. An integrated 802.11b/g WLAN Access Point (AP) with Wi-Fi Protected Setup (WPS) provides wireless coverage; while advanced security features such as WPA/WEP encryption and Stateful Firewall help protect your network.

FEATURES

Wireless LAN Connections (with WPS)

An integrated 802.11b/g Access Point (AP) supports LAN traffic at speeds of up to 54 Mbps. The Wireless Protected Setup (WPS) feature makes wireless connection setup quick and secure.

Fast Wired Connections

An Ethernet WAN port provides compatibility with advanced high-speed connections, such as GPON. The ADSL2/2+ port carries WAN traffic at speeds of up to 24 Mbps, while four Ethernet LAN ports support local traffic at speeds up to 100 Mbps.

Safe & Secure Connections

First, both a Stateful Firewall (with DoS protection) and NAT/PAT protect the LAN from external threats. Second, IP and MAC address filtering provide fine-grained access control to or from the network. Third, Virtual Private Networks (VPN) with pass-through (PPTP/L2TP/IPSec) and WPA/WPA2/802.1x/WEP guarantee rock-solid security for both wired and wireless connections.

Quality Of Service

Classify, control, and prioritize diverse traffic types, for pristine video, toll-quality voice, and error-free data.

Remote Management (TR-069 supported)

TR-069/TR-098/TR-111 standards compatibility ensures interoperability with central office remote management equipment. From the user perspective this reduces downtime and frustration. For the service provider it means improved customer relations and cost savings. Other management options include telnet, ssh and a web user interface with advanced functionality.
