

300Mbps Wireless N Range Extender

2.4GHz

Freedom of Wireless

The Wireless N Range Extender is the easiest way to expand wireless coverage in your home or small office. Just put it in between your wireless router and the dead spot in your area that you want to cover. It is designed to "repeat" signals into the far, hard-to-reach areas of your home or office. Eliminating the need to run cables lets you build a wireless network in a most cost effective way. The Wireless-N Range Extender works with most Wireless access points and wireless routers, and is compatible with Wireless-B, G, and N devices. Installation is a snap with push-button setup. Just plug it in and press the button. There is also an easy to use installation wizard for more complicated setups.

Key Differentiators

WIRELESS 802.11N TECHNOLOGY

The most advanced wireless networking technology for the best range and speed

RANGE EXPANDER FEATURE

Extends the range of Wi-Fi networks to areas that the signal cannot reach.

CLIENT BRIDGE MODE

One 10/100 port allows connection of an Ethernet equipped device to a wireless network

PUSH-BUTTON SETUP

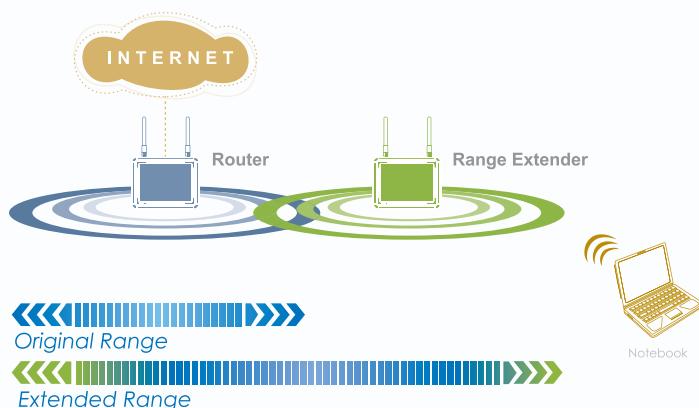

Configurable through push-button setup, your networked PC's Web browser, or the included Setup Wizard

WORKS WITH WIRELESS-B, WIRELESS-G AND WIRELESS-N

SUPPORTS WEP, WPA, AND WPA2 SECURITY

REMOVEABLE AND UPGRADEABLE ANTENNAS

Maximum data rates are based on IEEE 802.11 standards. Actual throughput and range can vary depending on many factors including network conditions, environmental factors, distance between devices, radio interference in the operating environment, and mix of devices in the network.
