

D-Link

Quick Installation Guide

This product can be set up using any current web browser, i.e., Internet Explorer 6x or Netscape Navigator 7x.

DSL-6740B

Wireless VDSL2 4-port Ethernet Router

Before You Begin

Make sure you have all the necessary information and equipment on hand before beginning the installation.

Check Your Package Contents

DSL-6740B Wireless ADSL Router

Ethernet Cable (Cat 5 UTP)

Telephone cable

Power Adapter

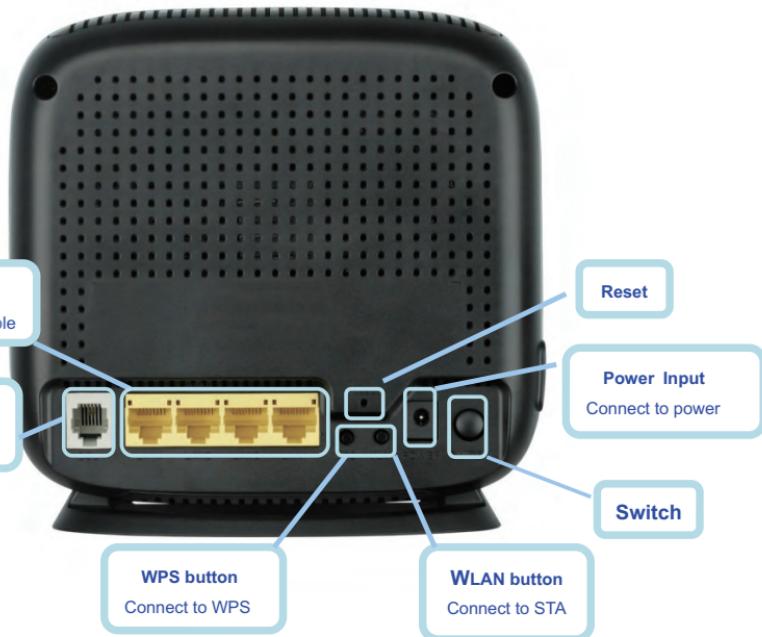

a power supply
different voltage rating
will damage and void the
warranty for this product.

If any of the items above are missing, please contact your reseller.

1

Connecting the Router to Your Computer

- A. First, connect the power adapter to the receptor at the back panel of the DSL-6740B and then plug the other end of the power adapter to a wall outlet or power strip. The Power LED will turn on to indicate proper operation.
- B. Insert one end of the cable into any Ethernet port on the back panel of the DSL-6740B and the other end of the cable to an Ethernet Adapter or available Ethernet port on your computer.
- C. Insert one end of the telephone cable into the ADSL port on the back panel. Connect the other end of the cable to the telephone wall outlet or low pass filter device that is connected to the telephone wall outlet.

2

Configuring the Router

To use your Web browser to access the web pages used to set up the Router, your computer must be configured to “**Obtain an IP address automatically.**,” that is, you must change the IP network settings of your computer so that it is a **DHCP Client**. If you are using **Windows XP** and do not know how to change your network settings, skip ahead to **Appendix A** and read the instructions provided. You may also read the User Manual for instructions on changing IP settings for computers running Windows operating systems.

Open your Web browser and type “<http://192.168.0.1>” into the URL address box. Then press the **Enter** or **Return** key. The login dialog appears.

The logon pop-up screen will appear.

Click **OK**.

3

Configuring the Router (continued)

After login in to the DSL router, if no PVC is configured previously and no default settings exists, the **Quick Setup** webpage appears, which contains some basic configuration that is needed by VPI/VCI.

- **ATM Interface Configuration**

Choose **Advanced Setup > Layer2 Interface**, and the following page appears, so you can add or remove the ATMVPI/VCI and related configurations.

The screenshot shows the 'DSL ATM Interface Configuration' page from a D-Link router's web interface. On the left, a vertical menu lists various setup options: Device Info, Advanced Setup, Layer2 Interface, ATM Interface, PTM Interface, WAN Service, LAN, NAT, Security, URL Filter, Quality of Service, Routing, DNS, DSL, UPnP, DNS Proxy, Storage Service, Interface Grouping, IP Tunnel, IPSec, Multicast, Wireless, Diagnostics, and Management. The main content area is titled 'DSL ATM Interface Configuration' and includes a note: 'Choose Add, or Remove to configure DSL ATM interfaces.' Below this is a table with the following columns: Interface, Vpi, Vci, DSL Latency, Category, Peak Cell Rate(cells/s), Sustainable Cell Rate(cells/s), Max Burst Size(bytes), Link Type, Copy Mode, IP QoS, HPAAL Prec/Alu/Wght, and Remove. A single row is present in the table, showing 'atm0' for the interface, '0' for Vpi, '33' for Vci, 'Path0' for Category, and 'User' for Link Type. At the bottom of the table are 'Add' and 'Remove' buttons. The status bar at the bottom of the browser window indicates 'Recommend: 1024x768 pixels, High Color(16 bit)'.

Interface	Vpi	Vci	DSL Latency	Category	Peak Cell Rate(cells/s)	Sustainable Cell Rate(cells/s)	Max Burst Size(bytes)	Link Type	Copy Mode	IP QoS	HPAAL Prec/Alu/Wght	Remove
atm0	0	33	Path0	User				EoA	VanillaMode	Support	8/WRR/1	<input type="checkbox"/>

ATM PVC Configuration

This screen allows you to configure a ATM PVC.

VPI: 0 [0-255]
 VC: 35 [32-65535]

Select DSL Latency:
 Path0 (Fast)
 Path1 (Interleaved)

Select DSL Link Type (EoA is for PPPoE, IPoE, and Bridge.)

EoA
 PPPoA
 IPoA

Encapsulation Mode:

LLC/SNAP-BRIDGING

Service Category:

UBR Without PCR

Select Scheduler for Queues of Equal Precedence as the Default Queue:

Weighted Round Robin
 Weighted Fair Queuing

Default Queue Weight:

1 [1-63]

Default Queue Precedence:

0 [1-8] (lower value, higher priority)

VC WRR Weight:

1 [1-63]

VC Precedence:

0 [1-8] (lower value, higher priority)

Note: VC scheduling will be SP among unequal precedence VC's and WRR among equal precedence VC's.
 For single queue VC, the default queue precedence and weight will be used for arbitration.
 For multi-queue VC, its VC precedence and weight will be used for arbitration.

(Recommended: 1024x768 pixels; High Color 16 Bits)

- **WAN Service**

Choose **Advanced Setup >WAN Service**, and the following page appears, so you can add/remove/Edit the WAN interface.

Interface	Description	Type	Vlan8021q	VlanHdId	Igmp	NAT	Firewall	IPv6	Mid	Remove	Edit
gigabit_0_0_33	pppoe	N/A	N/A	Disabled	Enabled	Enabled	Disabled	Disabled	<input type="checkbox"/>	<input type="button" value="Edit"/>	

Add Remove

(Recommend: 1024x768 pixels, High Color 16 Bits)

Click **Add** to create WAN service interface configuration; Click **Edit** to modify WAN service. According to the page context, choose the right item and click **Next, Back** step by step to configure WAN service.

When creating a WAN service, you can see the following page:

Configuring the Router (continued)

Wireless LAN Configuration

You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements.

Wireless - Basic

This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements.

Click "Apply/Save" to configure the basic wireless options.

Enable Wireless

Hide Access Point

Clients Isolation

Disable WMM Advertise

Enable Wireless Multicast Forwarding (WMF)

SSID: CPE-WIFI_ETB

BSSID: 02:10:18:01:00:02

Country: COLOMBIA

Max Clients: 16

Wireless - Guest/Virtual Access Points:

Enabled	SSID	Hidden	Isolate Clients	Disable WMM Adve	Enable	Max	Access
<input type="checkbox"/>	wb_Guest1	<input type="checkbox"/>	N/A				
<input type="checkbox"/>	wb_Guest2	<input type="checkbox"/>	N/A				
<input type="checkbox"/>	wb_Guest3	<input type="checkbox"/>	N/A				

Apply/Save

Recommend: 1024x768 pixels, High Color(16 Bits)

Following is a description of the different options:

- **Enable Wireless:** If you want to make wireless be available, you have to check this box first. Otherwise, the Hide Access Point SSID, Country, Enable Wireless Guest Network, and Guest SSID box will not be displayed.
- **Hide Access Point:** Check this box if you want to hide any access point for your router, so a station cannot obtain the SSID through passive scanning.

Click **Apply / Save** to save the basic wireless options and make the modification effect.

Wireless Security Configuration

DSL-6740B is equipped with WPA/WPA2 (Wi-Fi Protected Access), the latest security standard. It also supports the legacy security standard, WEP (Wired Equivalent Privacy). By default, wireless security is disabled and authentication is open. Before enabling the security, consider your network size, complexity, and existing authentication infrastructure and then determine which solution applies to it.

Wireless -- Security

This page allows you to configure security features of the wireless LAN interface. You may setup configuration manually OR through WiFi Protected Setup(WPS).

Note: When both STA P/N and Authorized MAC are empty, PBC is used. If Hide Access Point enabled or Mac filter list is empty with "allow" chosen, WPS2 will be disabled.

WPS Setup

Enable WPS: **Disabled**

Manual Setup AP

You can set the network authentication method, selecting data encryption, specify whether a network key is required to authenticate to the wireless network and specify the encryption strength. Click "Apply/Save" when done.

Select SSID: **CPE-WI-FI_ETB**

Network Authentication: **None**

Select the wireless LAN of SSID to configure security

Apply/Save

- Select SSID: Select the wireless LAN of SSID to configure security features.
- Network Authentication: Select the authentication mode for the selected wireless LAN of SSID. Please refer to the manual for more details of description.

Click **Apply /Save** to save the wireless security options and make the modification effect.

Appendix

For additional settings or information, refer to the **Advanced**, **Tools**, or **Status** tabs on the Web Management interface; or to the manual located on the CD-ROM.

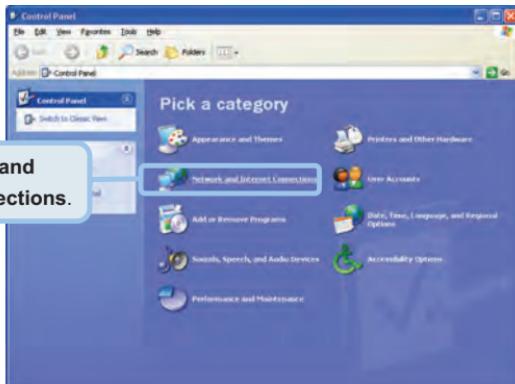

Configuring IP Settings in Windows XP

Use the following steps to configure a computer running Windows XP to be a DHCP client.

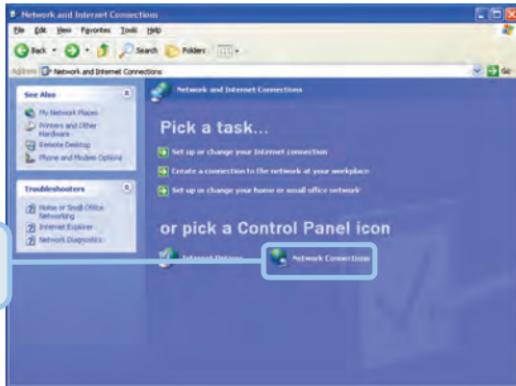

1. From the **Start** menu on your desktop, go to **Control Panel**.

2. In the Control Panel window, click **Network and Internet Connections**.

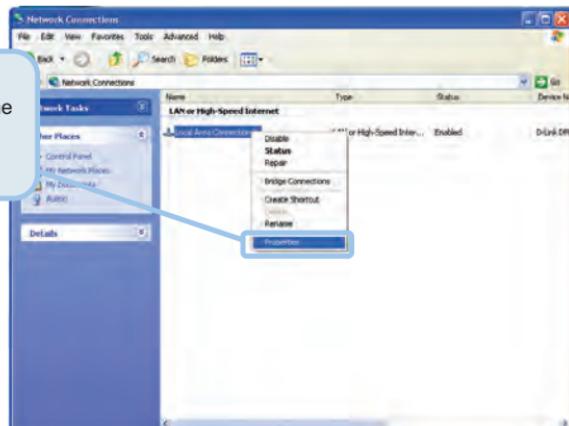

3. In the Network and Internet Connections window, click **Network Connections**.

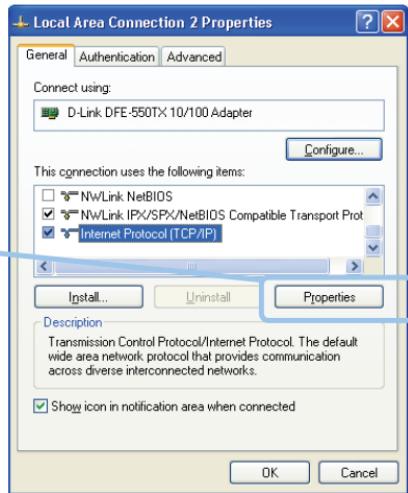

4. In the Network Connections window, right-click on **Local Area Connection**, then click **Properties**.

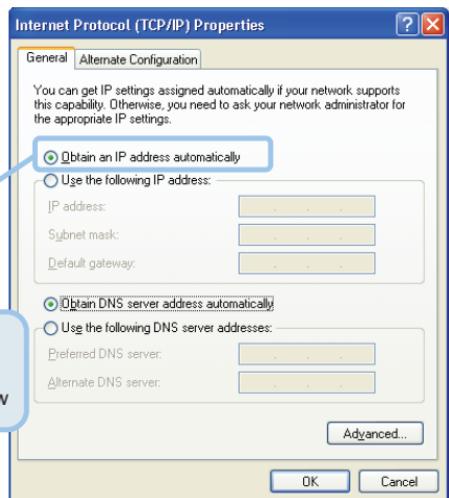

Right-click on the **Local Area Connection** icon and select the **Properties** option from the pull-down menu.

5. In the **General** tab of the **Local Area Connection Properties** window, highlight **Internet Protocol (TCP/IP)** under "This connection uses the following items." by clicking on it once. Click on the **Properties** button.

6. Select "Obtain an IP address automatically" by clicking once in the circle. Click the **OK** button.

Your computer is now ready to use the Router's DHCP server.

Guía de instalación rápida

Este producto puede configurarse usando cualquier navegador web actual, es decir, Internet Explorer o Netscape Navigator 6x 7x.

DSL-6740B

Router VDSL Wireless 11N

Antes de comenzar

Asegúrese de que usted cuenta con toda la información necesaria y el equipo a la mano antes de comenzar la instalación

Compruebe el contenido del empaque

Router ADSL Wireless DSL-6740B

Cable Ethernet (Cat 5 UTP)

Cable de teléfono

Adaptador de energía

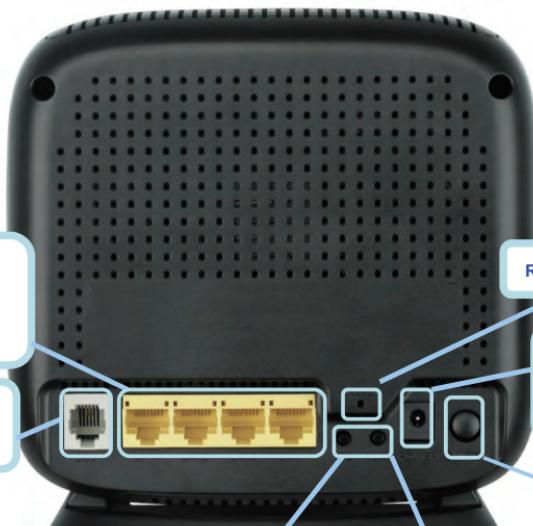

Una fuente de alimentación con distinto voltaje puede ser perjudicial y anular la garantía

Si alguno de los componentes anteriores no se encuentra, por favor contáctese con su distribuidor.

1

Conexión del Router al Computador

- A. En primer lugar, conecte el adaptador de alimentación al receptor ubicado en el panel trasero del DSL-6740B y luego conecte el otro extremo del adaptador de alimentación a una toma de corriente o regleta. El LED se encenderá para indicar un funcionamiento correcto.
- B. Introduzca un extremo del cable a un puerto Ethernet del panel trasero del DSL-6740B y el otro extremo del cable en un adaptador Ethernet o puerto Ethernet disponible en su computador.
- C. Inserte un extremo del cable telefónico en el puerto ADSL ubicado en el panel posterior. Conecte el otro extremo del cable al conector de teléfono de la pared o el dispositivo de filtro de paso bajo que está conectado a la toma de corriente de pared.

2

Configurar el Router

Para utilizar el navegador web y acceder a las páginas web que se utilizan para configurar el router, su equipo debe estar configurado para "Obtener una dirección IP automáticamente", es decir, debe cambiar la configuración de red IP de su computador para que sea un Cliente de servidor DHCP. Si utiliza Windows XP y no sabe cómo cambiar la configuración de red, vaya al Apéndice A y lea las instrucciones proporcionadas. También puede leer el Manual del Usuario para obtener instrucciones sobre cómo cambiar los parámetros IP en computadores con sistemas operativos Windows.

Abra su navegador Web y escriba "http://192.168.0.1" en la barra de direcciones URL. A continuación, pulse la tecla Enter o Return.

La ventana inicio de sesión aparecerá.

La ventana inicio de sesión aparecerá.

Escriba "Administrador" para el User name: y "soporteETB2006" en el campo Password:

Haga Clic en OK.

3

Configurar el Router (continuación)

Después de iniciar su sesión en el router DSL, si no se ha configurado previamente PVC y no existen ajustes por defecto, la página web de configuración rápida aparecerá, la cual contiene una configuración básica necesaria para VPI / VCI.

- **Configuración de la interfaz ATM**

Seleccione Configuración avanzada> Interface Layer 2, aparece la siguiente página, para que pueda agregar o quitar la ATMVPI / VCI y las configuraciones relacionadas.

The screenshot shows the 'DSL ATM Interface Configuration' section of the D-Link router's web interface. On the left, there is a navigation menu with various links like Device Info, Advanced Setup, Layer2 Interface, ATM Interface, PTM Interface, WAN Service, LAN, NAT, Security, URL Filter, Quality of Service, Routing, DNS, DSL, UPnP, DNS Proxy, Storage Service, Interface Grouping, IP Tunnel, IPSec, Multicast, Wireless, Diagnostics, and Management. The main area has a title 'DSL ATM Interface Configuration' and a sub-instruction 'Choose Add or Remove to configue DSL ATM interfaces.' Below this is a table with the following columns: Interface, Vpi, Vci, DSL Latency, Category, Peak Cell Rate(cells/s), Sustainable Cell Rate(cells/s), Max Burst Size(Byte), Link Type, Copy Node, IP QoS, HPAAL Prc/Algo/Wght, and Remove. A single row is present in the table: atm0 | 0 | 33 | Path0 | UBR | | | | | | | | | |. At the bottom of the table are 'Add' and 'Remove' buttons. The status bar at the bottom of the page says 'Recommend: 1024x768 pixels, High Color(16 bit)'.

Interface	Vpi	Vci	DSL Latency	Category	Peak Cell Rate(cells/s)	Sustainable Cell Rate(cells/s)	Max Burst Size(Byte)	Link Type	Copy Node	IP QoS	HPAAL Prc/Algo/Wght	Remove

Recommend: 1024x708 pixels, High Color/16 Bits

A continuación se presenta una descripción de las diferentes opciones:

- Habilitar Wireless:** Si usted desea habilitar la red inalámbrica, debe activar esta primera casilla. De lo contrario, no se mostrarán las opciones Hide Access Point SSID, Country, Enable Wireless Guest Network, and Guest SSID.
 - Esconder (Hide)Access Point:** Marque esta casilla si desea ocultar cualquier punto de acceso de su router, así una estación no podrá obtener el SSID a través del escaneo pasivo.
- Haga clic en Apply/Save para guardar las opciones inalámbricas básicas y que las modificaciones se hagan efectivas.

Configuración de Seguridad Inalámbrica

DSL-6740B está equipado con WPA/WPA2 (Wi-Fi Protected Access), el estándar de seguridad más reciente. También es compatible con el estándar de seguridad heredado, WEP (Wired Equivalent Privacy). De forma predeterminada, la seguridad inalámbrica está desactivada y la autenticación está abierta. Antes de habilitar la seguridad, tenga en cuenta el tamaño de su red, la complejidad y la infraestructura de autenticación existente y luego determine qué solución se aplica a ella.

Seleccione SSID de la red LAN inalámbrica para configurar la seguridad

- Seleccione SSID:** Seleccione SSID de la red inalámbrica para configurar las funciones de seguridad.
- Autenticación de red:** seleccione el modo de autenticación para la LAN inalámbrica seleccionada.
Por favor, consulte el manual para obtener más detalles de descripción.

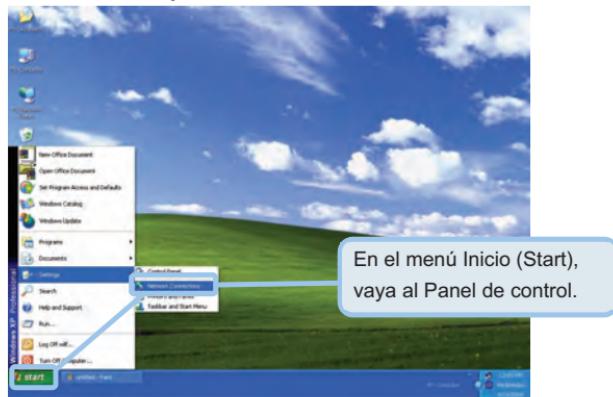

Haga clic en **Apply/Save** para guardar las opciones de seguridad inalámbrica y las modificaciones se hagan efectivas.

Apéndice

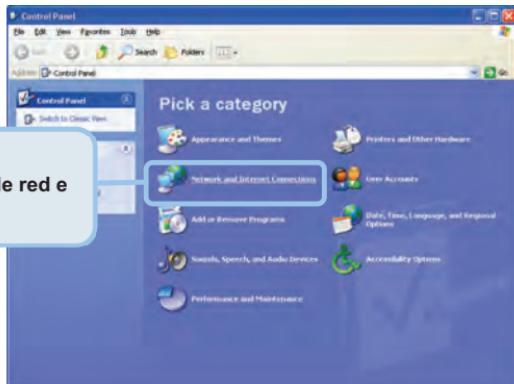

Para información o parámetros adicionales, consulte las pestañas **Avanzado**, **Herramientas**, o **Estado** en la interfaz de administración web, o consulte el manual que se incluye en el CD-ROM.

Configuración de los parámetros IP en Windows XP

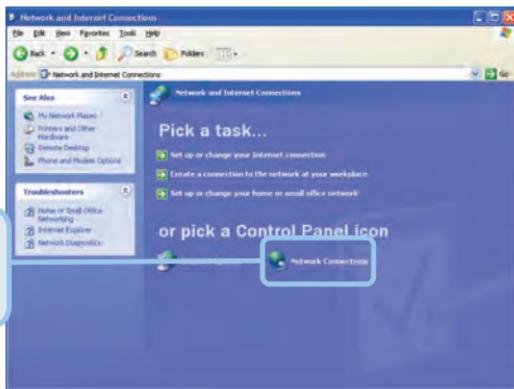

Utilice los siguientes pasos para configurar un computador con Windows XP para que sea un cliente DHCP. En el menú Inicio, vaya a Panel de control.

1. En la ventana panel de control, haga clic en **Conexiones de redes e Internet**.

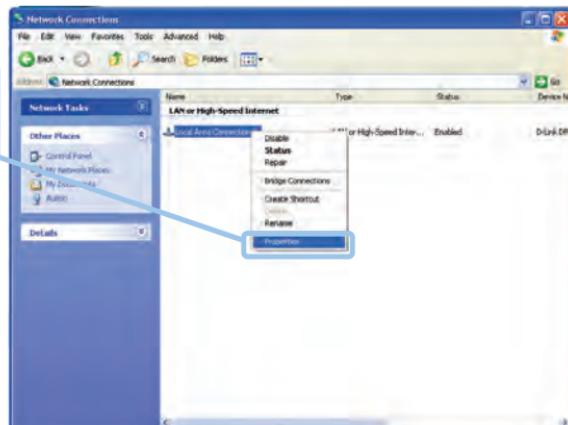

2. En la ventana **Conexiones de redes e Internet**, haga clic en **Conexiones de Red**.

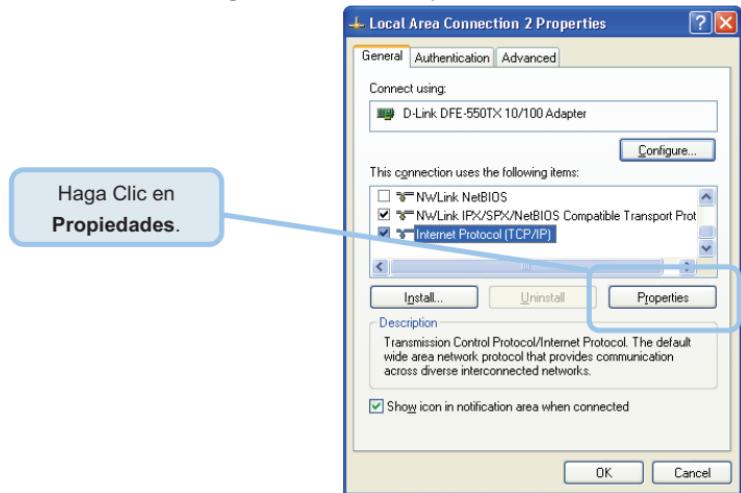

3. En la ventana **Conexiones de Red**, Clic derecho en **Red de Área Local**, luego clic en **Propiedades**.

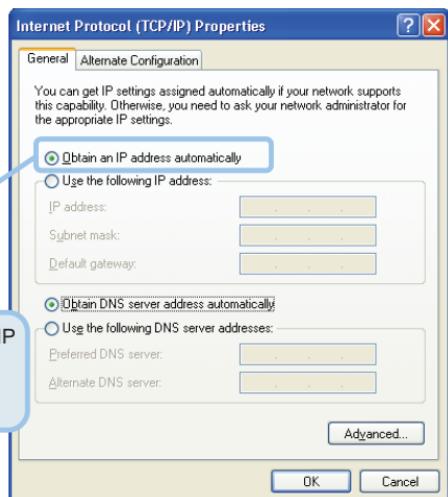

Clic derecho en **Red de Área Local**, luego clic en **Propiedades**.

4. En la pestaña General de la ventana Propiedades de conexión de área local, seleccione Protocolo de Internet (TCP / IP) "Esta conexión utiliza los siguientes elementos:" haciendo clic en él una vez. Haga clic en el botón Propiedades.

5. Seleccione "Obtener una dirección IP automáticamente" haciendo clic una vez en el círculo. Haga clic en el botón Aceptar.

El equipo está ahora listo para usar el servidor DHCP del router.

NOTES

FCC INFORMATION

This equipment complies with CFR 47, Part 15.19 of the FCC rules. Operation of the equipment is subject to the following conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received; including interference that may cause undesired operation.

THIS DEVICE MUST NOT BE CO-LOCATED OR OPERATING IN CONJUNCTION WITH ANY OTHER ANTENNA OR TRANSMITTER

FCC - PART 68 This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the bottom of this equipment is a label that contains, among other information, a product identifier in the format US:3P7DL01BDSL-6740 and REN is 0.12B for the test equipment. The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2002, the REN for this product is part of the product identifier that has the format US:AAAEQ##TXXXX. The digits represented by ## are the REN without a decimal point (e.g., 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label. It uses the following USOC jacks: RJ-45, RJ11. A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant telephone cord and modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant. See installation instructions for details. If this equipment, the Wireless VDSL2 4-port Ethernet Router, causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary. The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service. If trouble is experienced with this equipment, Wireless VDSL2 4-port Ethernet Router, for repair or warranty information, please contact: **D-Link USA Inc. 7 Phone : 14-885-6000 If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.** If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this device does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or qualified installer. Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information. Electrical Safety Advisory Telephone companies report that electrical surges, typically lightning transients, are very destructive to customer terminal equipment connected to AC power sources. This has been identified as a major nationwide problem. Therefore it is advised that this equipment be connected to AC power through the use of a surge arrestor or similar protection device. Manufacturer's Declaration of Conformance Warnings: This is a Class B product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures. Adequate measures include increasing the physical distance between this product and other electrical devices.

Federal Communications Commission (FCC) Requirements, Part 15

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

---Reorient or relocate the receiving antenna.

---Increase the separation between the equipment and receiver.

---Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

---Consult the dealer or an experienced radio/TV technician for help.

Â

REGULATORY INFORMATION / DISCLAIMERS

Installation and use of this Wireless LAN device must be in strict accordance with the instructions included in the user documentation provided with the product. Any changes or modifications (including the antennas) made to this device that are not expressly approved by the manufacturer may void the user's authority to operate the equipment. The manufacturer is not responsible for any radio or television interference caused by unauthorized modification of this device, or the substitution of the connecting cables and equipment other than manufacturer specified. It is the responsibility of the user to correct any interference caused by such unauthorized modification, substitution or attachment. Manufacturer and its authorized resellers or distributors will assume no liability for any damage or violation of government

CAUTION: To maintain compliance with FCC's RF exposure guidelines, this equipment should be installed and operated with minimum distance 20cm between the radiator and your body. Use on the supplied antenna. Unauthorized antenna, modification, or attachments could damage the transmitter and may violate FCC regulations.
