# **Product Introduction**

corega 's WLBARGS is an advanced model of broadband Router as well as a IEEE802.11g wireless access point which can speeds up to 108Mbps. Its management interface is straightforward for ease in setting up, while it supports various security features to effectively prevent hackers from attacking your networks, such as firewall, WPA, Mac Address filtering, VPN pass through, hidden ESSID and no respond to the WAN ping function. Different from the dull and usual matchbox design, WLBARGS router is elegantly streamline designed, which is a definitely a plus to this superb device.

## **1.1 Package Contents**

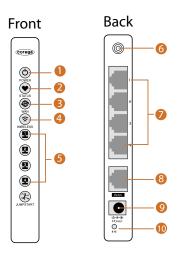

Check the listed contents thoroughly before installation. In case of discrepancy to the list below, check with your local dealers.

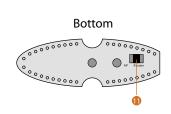

- Wireless 108M Boardband router
- Power Adapter
- Detachable Antenna
- Flat UTP cable
- Product stand Kit (with mounting screws)
- Wall mount kit
- User Manual
- Quick Installation Guide

## 1.2 Features

- Integrated 4 switched 100BASE-TX10BASE-T auto sensing ports.
- Support Super G mode which can speeds up to 108Mbps
- Built-in NAT and NAPT allowing multiple PCs and network equipments connect to Internet simultaneously for internet gaming, and IM software.
- Allows wireless LAN, and Ethernet LAN to transfer data to each other, and accessing broadband internet.
- WEP(64/128bits), VAN pass through (IPsec, PPTP, L2TP), and WPA-PSK security technology.
- Prevents from hacker attack with massive load of packet attack by easy Firewall (detecting Denial of Serivce attack), and AP hiding function.
- · Supports web-base management interface
- Supports UPnP and supporting on-line broadband applications (Such as Windows Messenger, MSN Messenger, Yahoo Mesenger, Skype, ICQ and etc.)
- Allows external Internet users to access information, and compatible on-line gaming from the internal target host by setting the Virtual Server, and DMZ setting.
- · Easy browser setting.

## **1.3 Hardware Introduction**

- 1. Power LED (Green) Indicate power status
- 2.Status LED (Red) ON:Reboot/Hung up/FirmWare upgrade
- 3.WAN LED (Green) ON: Connected Blink:Transmitting or receiving data
- 4. Wireless LED (Green) ON: Wireless function enable Blink:Transmitting or receiving data
- 5. LAN LED (Green) ON: Connected Blink: Transmitting or receiving data OFF: Disconnected

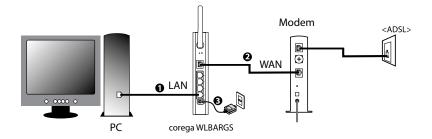

- 6. Detachable Antenna Connector
- 7. LAN port(1-4) Connected with PC
- 8.WAN port Connected with modem
- 9. DC IN Socket Connect with power adapter
- 10. Initial Button Press this buttom it will reset to the default setting.
- 11. AP/Router Switch Button Details please refer to Chapter 7.

## 2.1 WLBARGS should be connecting to PC and modem

Following the steps below to set up WLBARGS and the connection.

- (1) Insert the cable connector into the Network Adapter embedde in PC, and insert the other side into one of LAN ports (1~4) of the Router.
- (2) Insert the connect into the WAN port of the Router and insert the other side into the WAN port of the modem.
- (3) Connect the Power Adapter, and plug in the AC power.

## 2.2 Installation Procedure

To ensure successful installation, following the below steps after confirming all installation data and/or equipment.

Install the hardware -> PC set-up -> Open the browser (such as IE 6.0), and type [192.168.1.1] in the browser's address bar, and press enter. -> Enter ID: Root, and leave Password empty, and press OK.->Select [Quick Installation Setting] for quick installation->Setting the Wirless Security->Use PC with compatible wireless card for wireless connection.

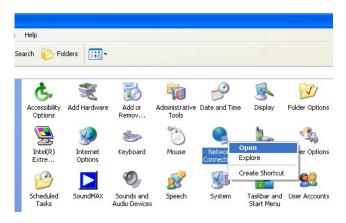

**PC** Setting

## **3.1 TCP/IP Configuration**

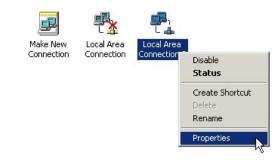

The following steps and screenshots maybe dissimilar in different operating systems. This manual takes Windows XP/200, 95/98/ME, and Mac O/S as examples:

#### 3.1.1 Windows XP O/S

 Enter [Control Panel] -> click [Network Connection] -> right click and select [Open].

(2) Click [Local Area Connection] and right click and select [Properties].

(3) Click [General] -> click [Internet Protocol (TCP/IP), and click [Properties].

Connec	st using:

- (5) Go to [Network] and press [OK] to close the page.
- (6) The [Restart the windows] screen will pop-up, press [OK] to restart the PC. If the PC is not shown this message, restart the PC manually.

#### 3.1.4 Mac OS 8.x~9.x O/S

- (1) Open the [TCP/IP] configuration from [Control Panel].
- (2) Select [Ethernet Network] in the [connection methods]; select [DHCP server] in [Configuration], and close this page.

## 3.1.5 Mac OS X O/S

- (1) Go [System Configuration] in Macintosh category.
- (2) Open [Network] configuration in [System Configuration]. If there is no [Network] configuration, select [Display all].
- (3) Select [Built-in Ethernet] in [Display] from [Network] window. Select [Use DHCP] in [Setting] from [TCP/IP].
- (4) Press [Apply].

## **3.2 Browser Configuration**

#### 3.2.1 Windows O/S

The following examples are for Windows XP O/S, skip this chapter if you are using Windows 200/98/ME.

(1) Open Internet Explorer (IE 6.0), select [Tools] menu and click [Internet Options]. If a [Dial-up Connection] window is pop-up, close it, and do not connect to the Internet now.

(2) Click [Connections] tab -> select [Never dial a connection] -> click [LAN Settings].

Internet Options	? 🛛

(3) Unselect all three options in the [Local Area Network LAN Setting].

Local Area Network (LAN) Settings 🛛 🛛 🕅
Automatic configuration Automatic configuration may override manual settings. To ensure the use of manual settings, disable automatic configuration.  Automatically detect settings Use automatic configuration script Address Uncheck these boxes.
Procy server Use a proxy server for your LAN (These settings will not apply to dial-up or VPN connections).
Address: Port: Advanced
Bypass proxy server for local addresses
OK Cancel

(4) Press [OK] in the [Internet Options].

#### 3.2.2 Mac O/S

- (1) Open Internet Explorer (IE 5.0) Go to [Edit] in the menu bar, select [Internet Explorer Preferences].
- (2) Select [Proxies] options in [Network] on the left-side configuration items.
- (3) Do not select [Web Proxy], press [OK].

## 4.1 Quick Network Configuration

Basic configuration is required before connection your computer to the internet via WLBARGS. The connection methods may be differed by your contract to the ISP. Please reconfirm your connection conditions with your ISP prior to configure this router. The configuration procedures are as follow:

- \*Note: Anti-virus or Firewall software may prevent this router from being set-up properly. Please close such software through out the setting of WLBARGS.
- (1) Open the Web browser (Internet Explorer 6.0). If you use dial-up network such as PPPoE, and are using Windows 2000/98/ME O/S. The [Dial-up Network] window will pop-up; do not connect to the Internet right now, and close the window.
- (2) Type [192.168.1.1] in the browser's address bar, press [Enter].

\*Note: [192.168.1.1] is the IP address for configuring CG-WALBARGS, and is not corega's company public internet address. After you have completed the configuration, connect to [http://www.corega-asia.com] for testing the connection.

(3) When log-in screen is appeared, type [root] for the username, and leave empty for the password. Press [Summit].

Username :	root
Password :	
S	ubmit Reset

(4) Please select the language. e.g.) English. Click on [Apply].

#### Language Options/選擇語言

- (5) Open the web browser (IE 6.0), and test with any website for testing the connection.
  - \*Note: If the connection to the website fails. Please make sure the data you entered are correct, or any mistake occured in the process of the installation, such as the LAN/WAN connections. After verifying that, repeat these setps in the section.

## 4.2 Establishing Wireless Internet Connection

So far, you should be able to connect to the Internet wirelessly. However, please be reminded that your network is not safe and the connection is open to anyone. Please consult [Chapter 5 Wireless Security Configuration] for security setting. Wireless connection are illustrated as follows.

Hereunder is the setting on Centrino Notebook as an example, for wireless adopters in other brands, please refers to the original manuals.

#### <Windows XP (SP1) O/S>

(1) Go [Control Panel] -> double click on [Network connection] -> right click on [Wireless Network Connection] -> select [properties] -> click on [Wireless Network] tab -> select [Use Windows to configure my wireless networks setting], and press [OK].

neral	Wireless Networks	Advanced

KEY 2 O				
KEY 3 O				
KEY 4 O				
WPA shared key	(±). A	SCII key (8-63 char	acters) 🕖 Hex	adecimal(64 character
	_			
DTIM	51	(1 - 5)		
Rekey Interval		(0 or 30)-1800	) seconds)	
		RADIUS sener setue		

- (1) [Open System] or [Shared Key]. Select [Open System] or [Share Key] from Authentication menu.
- (2) Select [WEP] from Cipler menu
- (3) Select [64-bit], [128-bit], or [152-bit] from the Encryption menu.
- (4) Type encryption code in [Key1].

\*64 bit: hex (0~9, a~f), 10 digits in total. \*128 bit: hex (0~9, a~f), 26 digits in total.

\*152 bit: hex (0~9, a~f), 32 digits in total.

Or you can click [Generate Key] to obtain a password automatically:

a. Enter any character in the column of [Auto generate WEP].

b. Click [Generate Key].

c. Passwords will be generated automatically in the columns of Key1 ~ Key4.

\*P.S. Every kind of network adapter might have different encryption ways, so [Generate Key] isn't recommended. Check before selection.

- (5) Recommended to keep default values of [DTIM] and [Preamble Mode].
- (6) Save your settings by [Apply].
- (7) Parameters can be output by [Output Info.]

## 5.2 WPA Setting

WPA is encrypted by a periodic update, making it more difficult to be hacked. Home users and company users are recommended to use <WPA-PSK> and <WPA-EAP> respectively.

#### <WPA-PSK>

- (1) Select [WPA2-PSK] or [WPA/WPA2-PSK] in the column of [Authentication] (Recommended).
  - a. [WPA2-PSK]: The 2nd generation encryption technology performs stricter protection than ever. Before selection, please check the function availability of your network adapter, or select b.
  - b. [WPA/WPA2-PSK]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.

(2) Select [Cipher Type]. (Recommended to keep the default.)

Authentication	WPAWPA2 · PSK 💌	
Cipler Type	Auto (AES / TKIP) ¥	
Encryption	Auto (AES / TK/P) AES	
Auto generate WEP		
WEP KEY	Hexadecimal( 0- 9/ a-f).	
KEY 1 -		

- \*Note: The wireless network adapter is required to have the same setting; otherwise, the connection will fail.
- (3) After selecting [WPA shared key], key in the Pre-Shared-Key in connection with the communication device in the below column. Please enter 8~63 alphabets or numbers.

\* Note: The password of the device in connection with the product must be the same; otherwise, the connection doesn't work out.

- (4) Recommended to keep default values of [DTIM] and [Rekey Interval].
- (5) Press [Apply] to save setting.
- (6) Parameters can be output by [Output Info].

#### <WPA-EAP>

- (1) Select [WPA2-EAP] or [WPA/WPA2-EAP](Recommended). in the column of [Authentication]
  - a. [WPA2-EAP]: The 2nd generation encryption skill performs stricter protection than before. Before selection, please check the function availability of your network adapter, or select b.
  - b. [WPA/WPA2-EAP]: If selected, encryption type will be defined automatically according to the corresponding wireless network adapter.

	Wireless setting / 802
Authentication	Open System 💌
Cipler Type	Open System
Encryption	WPA2 - EAP

	server addresses can be inserted: DNS1 and DNS2	

#### <WAN setting/ Dynamic DNS>

Dynamic DNS is a connection of LAN's virtual server through URL internet access or called dynamic IP (No fixed IP address) that also can connect through URL internet access.

	WANSett	ing / Dynam	IIC DIAS		
Virtual server devices can be connected	through UF	RL internet ac	cess.		
There are 3 types of dynamic DNS servi	ces availabl	le. Please refe	er to the follow	ving pages.	
DynDNS.org free service. Here is the lo (English page)	gin page.				
No-IP com free service. Here is the logi (English page) minIDNS net free service. Here is the lo (English page)					
Dynamic DNS 1	Disable	*			
Login name	2				
Login password	8				
Domain name 🗸					
IP check time	14 day 🛩				
6	Apply	Cancel E	Back		

- (1) select available dynamic DNS services.
- (2) enter username for dynamic DNS.
- (3) enter passwod for dynamic DNS.
- (4) enter domain name.
- (5) IP update interval.
- (6) Click [Apply].

#### <WAN setting/Other setting>

#### WAN setting / Other setting

Direct PPPoE	Disable 🛩
VPN pass through	Disable 😪

Direct PPPoE	PPPoE pass-through function enable/disable.
VPN pass through	VPN pass-through function enable/disable.

#### <LAN setting/LAN IP>

#### LAN setting / LAN IP

MAC address	00:0a:79:81:ef:60
LAN IP address	192 . 168 . 1 . 1
Subnet Mask	255 . 255 . 255 . 0
URL Home	corega.home

LAN IP address	The device ip address, not recommended to change this address.Default setting: [192.168.1.1].
Subnet mask	Deafult setting: [255.255.255.0].
URL Home	The device main page.

## <LAN setting /DHCP server>

- (1) Select [Enable] to enable DHCP server function. Default is [enable].
- (2) Enter DHCP servers start ip and end ip.
- (3) Then click on save button to save the setting.

### LAN setting / DHCP server

DHCP server	1 Enable 💌	
DHCP start IP	2 192.168.1. 21	
DHCP end IP	192.168.1. 50	

## <LAN setting/PC database>

the following table display the current connected users information, you can add/edit/delete users data.

PC name	IP address	Туре	MAC ddress	DHCP Client	Operate
ALLIED-SANDY	192.168.1.21	68.1.21 LAN	LAN 00.50 BF E7.92.0F	Auto obtain (DHCP client)	Edit

\*Add a pc data : click on [add] to add a new user data.

'C name : 9 address :	<ul> <li>Automatic (DHCP client) :</li> <li>Reserved (DHCP client) :</li> <li>Fixed IP address (Set on PC)</li> </ul>		192.168.1	
	Connection Type	LAN 🔽		

- (1) Enter the pc name and select network connection type.
- (2) Configure the mac address data.
- (3) Click [Add PC Data] to complete the setting.

## <Wireless setting/802.11g/b setting>

#### Wireless setting / 802.11g/b setting.

#### <Advanced setting/virtual server>

Virtual server is an appointed port opened by the PC in connection with the product, allowing other users connecting up via WAN. Open servers or special online games can take advantage of this function. Setting processes are as follows:

- (1) Select a PC to be the virtual server.
- (2) Select Service.
- (3) Enter Port Range of internet connection with the server, and Port Range used by the server software.
- (4) Select Protocol.
- (5) [Remark] column can be filled in with an explanation of the server.
- (6) Click [Add] after setting. All info will show in the below table.

	Connecting with a pc.	1	Please sel	ict a PC.	~			
	Service	2	User Defini	tion 🛩				
	Port Range	3		-	(1~6553	5) Advance	d Setting	
	Protocol	4	TCP	~				
	Remark	5						
tatus	Connecting with a pc.		6 Add	LAN	WAN	Protocol	Remark	Appl

#### <Advanced setting/DMZ>

If the online game's port range is unknown, or its parameter is different every login, DMZ function is recommended. While this function starts, select the users, being allowed to connect with, then click [Apply] to save.

	Advanced Setting / DN		
DMZ Server	Please select PC.	×	
	Apply Back		

\*Note:

- 1. The PC becomes vulnerable to being hacked if DMZ function starts. Please only use it in need.
- 2. The PC with DMZ function needs a fixed IP address.
- 3. DMZ function can only be used in one PC.

## <Advanced setting/UPnP setting>

Activating this function can detect the device or software of LAN, supporting UPnP. For example: online games supporting UPnP or Windows Messenger (Ver. 4.7 or above), MSN Messenger (Ver. 5.0 or above) and so forth. Set its status usable. The default value is [Enable].

Use UPnP	Enable 🔽

### <Advanced Setting/ Routing/ Dynamic Routing (RIP)>

The table allows dynamic routing setting. Select RIP version in the below columns (this product supports RIPv1 and RIPv2), then [Apply] to complete the setting.

#### Advanced Setting / Routing / Dynamic Routing (RIP)

LAN RIP Transferring	RIPv1	*
LAN RIP Receiving	RIPv1	~

## <Advanced Setting/ Routing/Routing Table>

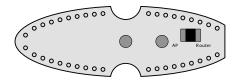

All dynamic routing logs are displayed in the table.

Advanced	-	-	 -
Advanced		Routina	

Destination	Subnet Mask	Default Gateway	Interface
192.168.1.0	255 255 255 0		LAN
10.15.1.0	255 255 255 0		WAN1
239.0.0.0	255.0.0.0		LAN
default	0.0.0.0	10.15.1.254	WAN1

If you would like to use AP (Access Point) function, please use the switch button in the bottom of the product. The operations are as the below:

- (1) Cut off the power.
- (2) Switch AP/Router to the left (AP side).

- (3) Plug in the product.
- (4) Now the product is in AP mode. Open browser to access setting page and enter [192.168.1.220] into the address bar, then press [Enter].

\*\* Warrning \*\*

This is a special application. In AP mode, the product stops to generate IP, WAN port doesn't function and LAN port also becomes a normal hub, so users are recommended to keep its router function.

FAO

When the installation fails or the connection doesn't succeed, it's recommended to take the following actions against the problems.

- (1) Find your problem in the troubleshooting collection.
- (2) Go to our official website at http://www.corega-asia.com, then click [Support] and click the [Online Customer Support] item. To fill the form page and note following information We will contact you as soon as possible.
  - Product name: e.g.) WLBARGS(R)
  - Firmware version: access the management program to check.
  - Your ISP service name.
  - Windows system: e.g.) Windows98/2000/XP and so on.
  - WEB browser(Version): e.g.) IE5.0/5.5/6.0 and so on.
  - Network adapter manufacturer and its driver version.
  - Connection way: fixed IP, dynamic IP or PPPoE dial-up connection.
  - What are your problem and situation: e.g.) unable to internet.
  - What is the error message or picture?

Q1.Not able to connect to the Internet.

Please make sure if the below processes are complete or not.

- (1) Is your subscription to ISP expired?
- (2) Have the powers of all relevant devices been switched on, or have cables or plugs been connected correctly?
- (3) Has the line between the modem and internet been connected correctly?
- (4) Have the cable lines among the modem, product and PC been connected correctly?
- => When the product and modem have been connected correctly, WAN LED will light up. If no light, please remove cable line, then re-plug in. If the modem has a MDI/ MDI-X button, please try to switch it.
- =>When the connection between PC and the product is normal, the Link/ Act LED of the front LAN port will light up after the PC's power is turned on.
- (5) Has the connection with ADSL's splitter been linked up correctly (There are two kinds of splitter: 'Telephone' and 'ADSL modem')?
- (6) Does the PC's network adapter function normally?
- => Right click on [My Computer] and select [Content] => [Administrator]
   =>Display[Network adapter]. If there is a marking of X or !, it means that the network adapter doesn't perform normally. Please re-install it.
- (7) Is your network setting correct?
- => Check if TCP/IP setting is correct or not (Please refer to [3.1 TCP/IP Configuraton to check your setting].
- (8) Has all information provided by your ISP been entered correctly?

(9) Are the settings of your web browser correct?

Q2. Not able to log in the management program.

A: You have 4 ways to check and solve the problem:

- (1) Close and re-open the IE browser and login the program again.
- (2) Log out and re-login the Windows OS. Then login the program again.
- (3) Probably the management program is accessed from the other user. Wait until that user exits the program.
- (4) Reset to default settings (Refer to Q8. for more details) and re-login the program.
- Q3. Forget the password.
- A: If you ever changed the password of the management program, please enter the one you set. If you forget the password, please reset to default settings .Please referre to Q8 for more details.
- Q4. How to set or change the password of the management program?
- A: Access the management program, and then click [Management]. Enter new password in the columns of [Admin login passowrd], and [password confirmation], then click [Apply]. When you re-access the management program, you must enter new username and password (The default username is [root] and no password.).

Q5. Failure in firmware update.

A: If the firmware update fails, please contact us by Online Customer Support webpage. Please go to the website of http://www.corega-asia.com -> click on [Support] and right click the [Online Customer Support] item -> Filling the form -> Click [Submit].

Q6 How to acquire your PC's IP address?

A: If you want to check your PC's IP address via the product, you may refer to the below steps:

## <Windows XP/ 2000>

- (1) Click [Start] => [Programs] => [Command prompt].
- (2) Input [ipconfig] => [Enter].
- (3) Confirm IP address (which sould be 192.168.1.1). If the ip is not incorrect, please enter 1-byte character as [ipconfig /renew] => Press [Enter].

### <Windows Me/ 98/ 95>

- (1) Click [Start] => Click [Run].
- (2) Input [winipcfg] in the column => press [Enter].
- (3) Select your network adapter to display IP address. The IP should be 192.168.1.1, if none, please click [Release] => Click [Renew].

Q7. How to reboot the product?

A: Reboot to get new setting values applied. The steps are as follows: open the management program-> Click on [Management]-> Click on [Proceed] in the [Reboot] column.

Q8: How to reset to default settings?

A: If you forget the password, get failed in setting or product hang up; you can reset the product's settings to default values. There are 2 ways for setting:

#### \* Use hardware

- (1) Use a spindle item (e.g. a clip) to press [Init button] in the back side of the product until [Status] lights up with red.
- (2) After the red light goes out, the system will restore its default values.

## \* Use software

 Click on the [Management] function item -> click on[Back to default setting] item from the setting page -> Click on [Proceed] to reset to default setings.

<sup>\*</sup>Note: The definitions of [Reboot], [Firmware update], and [Reset to default settings] are different. Please make sure of your intention before proceeding.

### Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

-•Reorient or relocate the receiving antenna.

-•Increase the separation between the equipment and receiver.

--Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-•Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

## IMPORTANT NOTE:

### FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

IEEE 802.11b or 802.11g operation of this product in the U.S.A. is firmware-limited to channels 1 through 11.
