## **Trademarks**

All products, company, brand names are trademarks or registered trademarks of their respective companies. They are used for identification purpose only. Specifications are subject to be changed without prior notice.

## **FCC Interference Statement**

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against radio interference in a commercial environment. This equipment can generate, use and radiate radio frequency energy and, if not installed and used in accordance with the instructions in this manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause interference, in which case the user, at his own expense, will be required to take whatever measures are necessary to correct the interference.

## **CE Declaration of Conformity**

This equipment complies with the requirements relating to electromagnetic compatibility, EN 55022/A1 Class B.

**The specification is subject to change without notice.**

# Chapter 1 Introduction

Congratulations on your purchase of this outstanding AirLive Wireless AP. This product is specifically designed for Small Office and Home Office needs. Instructions for installing and configuring this product can be found in this manual. Before you install and use this product, please read this manual carefully for fully exploiting the functions of this product.

## 1.1 Functions and Features

### AP Basic functions

- **Auto-sensing Ethernet Switch**  
Equipped with a 4-port auto-sensing Ethernet switch.
- **DHCP server supported**  
All of the networked computers can retrieve TCP/IP settings automatically from this product.
- **Web-based configuring**  
Configurable through any networked computer's web browser using Netscape or Internet Explorer.

### Wireless functions

- **High speed for wireless LAN connection**  
Up to 54Mbps data rate by incorporating Orthogonal Frequency Division Multiplexing (OFDM).
- **Roaming**  
Provides seamless roaming within the IEEE 802.11b (11M) and IEEE 802.11g (54M) WLAN infrastructure.
- **IEEE 802.11b compatible (11M)**  
Allowing inter-operation among multiple vendors.
- **IEEE 802.11g compatible (54M)**  
Allowing inter-operation among multiple vendors.
- **Auto fallback**  
54M, 48M, 36M, 24M, 18M, 12M, 6M data rate with auto fallback in 802.11g mode.  
11M, 5.5M, 2M, 1M data rate with auto fallback in 802.11b mode.

### Security functions

- **802.1X supported**  
When the 802.1X function is enabled, the Wireless user must authenticate to this router first to use the Network service.
- **Support WPA-PSK and WPA version 1 and 2**  
When the WPA function is enabled, the Wireless user must authenticate to this router first to use the Network service.

### Advanced functions

- **System time Supported**  
Allow you to synchronize system time with network time server.

## 1.2 Packing List

- Wireless AP unit
- Installation CD-ROM
- Power adapter
- CAT-5 UTP Fast Ethernet cable

# Chapter 2 Hardware Installation

## 2.1 Panel Layout

### 2.1.1. Front Panel

Figure 2-1 Front Panel

LED: Ports:

Port	Description
PWR	Power inlet

**Port 1-4** the ports where you will connect networked computers and other devices.

### 2.1.2. Rear Panel

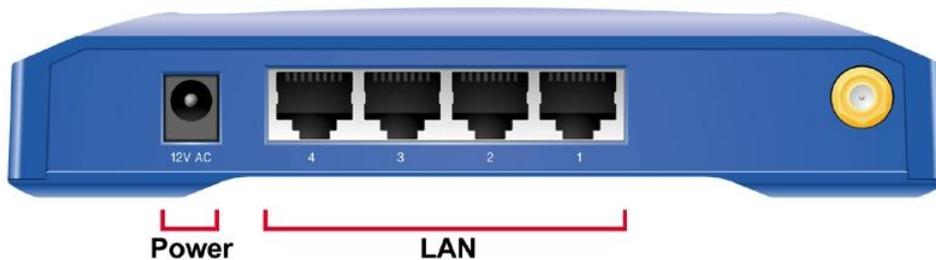

Figure 2-2 Rear Panel

LED:

LED	Function	Color	Status	Description
Power	Power indication	Green	On	Power is being applied to this product.
Status	System status	Green	Blinking	Status is flashed once per second to indicate system is alive.
WLAN	Wireless activity	Green	Blinking	The WAN port is sending or receiving data.
			Blinking	Sending or receiving data via wireless
Link. 1~4	Link status	Green	On	An active station is connected to the corresponding LAN port.
Speed 10/100	Data Rate	Green	Blinking	The corresponding LAN port is sending or receiving data.
			On	Data is transmitting in 100Mbps on the corresponding LAN port.
Reset				To reset system settings to factory defaults

## 2.2 Procedure for Hardware Installation

### 2. Decide where to place your Wireless Access Point

You can place your Wireless Access Point on a desk or other flat surface, or you can mount it on a wall. For optimal performance, place your Wireless Access Point in the center of your office (or your home) in a location that is away from any potential source of interference, such as a metal wall or microwave oven. This location must be close to power and network connection.

### 2. Setup LAN connection

- a. Wired LAN connection: connects an Ethernet cable from your computer's Ethernet port to one of the LAN ports of this product.
- b. Wireless LAN connection: locate this product at a proper position to gain the best transmit performance.

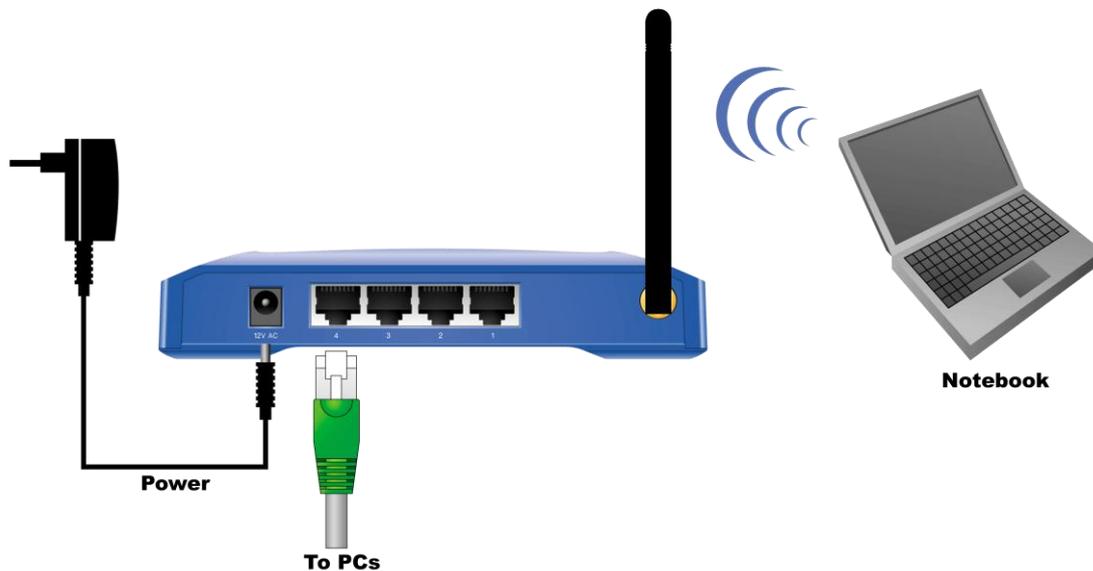

Figure 2-3 Setup of WLAN and LAN connections for this product.

### 4. Power on

Connecting the power cord to power inlet and turning the power switch on, this product will automatically enter the self-test phase. When it is in the self-test phase, the indicators M1 will be lighted ON for about 10 seconds, and then M1 will be flashed 3 times to indicate that the self-test operation has finished. Finally, the M1 will be continuously flashed once per second to indicate that this product is in normal operation.

# Chapter 3 Network Settings and Software Installation

To use this product correctly, you have to properly configure the network settings of your computers and install the attached setup program into your MS Windows platform (Windows 95/98/NT/2000).

## 3.1 Make Correct Network Settings of Your Computer

The default IP address of this product is 192.168.1.254, and the default subnet mask is 255.255.255.0. These addresses can be changed on your need, but the default values are used in this manual. If the TCP/IP environment of your computer has not yet been configured, you can refer to **Appendix A** to configure it. For example,

1. configure IP as 192.168.1.1, subnet mask as 255.255.255.0 and gateway as 192.168.1.254, or more easier,
2. configure your computers to load TCP/IP setting automatically, that is, via DHCP server of this product.

After installing the TCP/IP communication protocol, you can use the **ping** command to check if your computer has successfully connected to this product. The following example shows the ping procedure for Windows 95 platforms. First, execute the **ping** command

**ping 192.168.1.254**

If the following messages appear:

**Pinging 192.168.1.254 with 32 bytes of data:**

**Reply from 192.168.1.254: bytes=32 time=2ms TTL=64**

a communication link between your computer and this product has been successfully established. Otherwise, if you get the following messages,

**Pinging 192.168.1.254 with 32 bytes of data:**

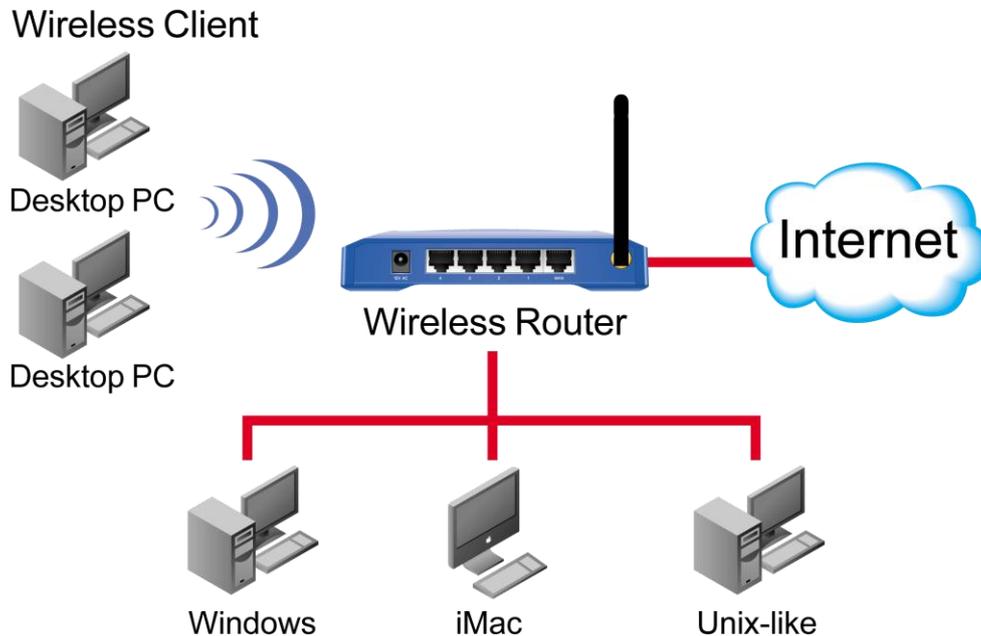

**Request timed out.**

There must be something wrong in your installation procedure. You have to check the following items in sequence:

1. Is the Ethernet cable correctly connected between this product and your computer?  
**Tip:** The LAN LED of this product and the link LED of network card on your computer must be lighted.
2. Is the TCP/IP environment of your computers properly configured?  
**Tip:** If the IP address of this product is 192.168.1.254, the IP address of your computer must be 192.168.1.X and default gateway must be 192.168.1.254.

# Chapter 4 Configuring Wireless Access Point

This product provides Web based configuration scheme, that is, configuring by your Web browser, such as Netscape Communicator or Internet Explorer. This approach can be adopted in any MS Windows, Macintosh or UNIX based platforms.

## 4.1 Start-up and Log in

Activate your browser, and **disable the proxy** or **add the IP address of this product into the exceptions**. Then, type this product's IP address in the Location (for Netscape) or Address (for IE) field and press ENTER. For example: **http://192.168.1.254**.

After the connection is established, you will see the web user interface of this product. There are two appearances of web user interface: for general users and for system administrator.

A window would pop-up asking for Login and Password. Please enter "**admin**" for login, and "**airlive**" for password.

## 4.2 Status

Item	Setting
Wireless MAC Address	00-4F-67-02-AA-92
Network ID (SSID)	airlive
Channel	11
Security Type	None

This option provides the function for observing this product's working status:

- A. **Wireless MAC Address:** display the MAC address of this Wireless Access Point.
- B. **Network ID (SSID):**  
The SSID is the network name used to identify a wireless network. The SSID must be the same for all devices in the wireless network (i.e. in the same BSS). Several access points on a network can have the same SSID. The SSID length is up to 32 characters. The default SSID is "airlive".
- C. **Channel:** display the Channel number of this Wireless Access Point
- D. **Security Type:** shows Wireless Security type information

## 4.3 View Log

Click the View Log button on System Status Page You can see the access logs from this screen also you can download the logs and save to your computer.

Display time: Tue Feb 01 00:01:36 2005  
2008年3月28日 下午 04:02:04 TX TCP reset for 192.168.0.71(50783) -> 192.168.0.242(80)

## 4.4 Client List

You can see the DHCP client information include Client IP, Host Name, Client's MAC address, administrator can select the client and do wake up and Delete actions, before you click the Wake Up button, just make sure the network adapter of the machine support wake on LAN function and turn it on. then just workable.

The screenshot shows the web interface for the Air Live WT-2000AP Turbo-G Wireless Access Point. The header includes the Air Live logo, navigation links for 'Quick Setup' and 'Status', and the product name 'WT-2000AP Turbo-G Wireless Access Point' with the website 'www.airlive.com'. On the left, a sidebar menu shows 'Basic Setting' (with sub-items: Primary Setup, DHCP Server, Wireless), 'Advanced Setting', and 'Maintenance'. The main content area is titled 'DHCP Clients List' and features a table with columns for 'IP Address', 'Host Name', 'MAC Address', and 'Select'. Below the table are four buttons: 'Wake up', 'Delete', 'Back', and 'Refresh'.

## 4.5 Wizard

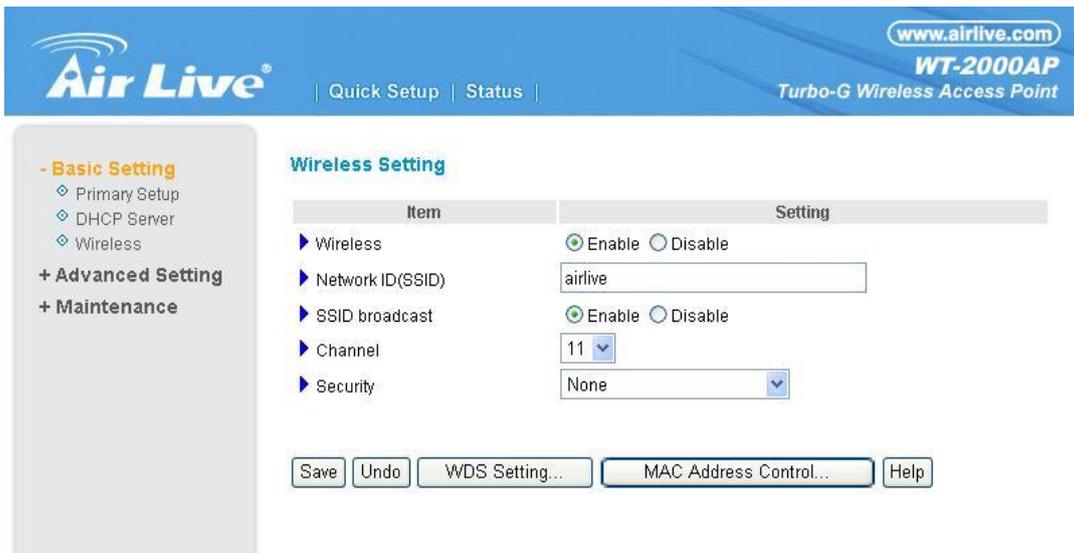

Setup Wizard will guide you through a basic configuration procedure step by step. Press "Next >"

The screenshot shows the 'Setup Wizard' page in the web interface. The header is identical to the previous screenshot. The sidebar menu shows '+ Basic Setting', '+ Advanced Setting', and '+ Maintenance'. The main content area is titled 'Setup Wizard' and contains the text: 'Setup Wizard will guide you through a basic configuration procedure step by step.' At the bottom right of the main content area, there is a 'Next>' button.

**Setup Wizard – LAN IP Address:** enter the IP address of this machine.

**Setup Wizard – Wireless Setting :** for details , please read the Basic Setting → Wireless.:

**Setup Wizard – Configuration is Completed :** save and Reboot this machine

## 4.6 Basic Setting

Basic Setting have Primary Setup, DHCP Server, and Wireless setting functions.

### 4.6.1 Primary Setup – LAN IP Address

Item	Setting
▶ LAN IP Address	192.168.0.241
▶ Subnet Mask	255.255.255.0
▶ Gateway	0.0.0.0 (optional)

Entering the IP Address: default ip is 192.168.1.254, you can change ip address in this field and Press “**Save**”

### 4.6.2 DHCP Server

Item	Setting
▶ DHCP Server	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
▶ IP Pool Starting Address	100
▶ IP Pool Ending Address	199
▶ Domain Name	

The settings of DHCP server include the following items:

1. **DHCP Server:** Choose “Disable” or “Enable.”

2. **IP pool starting Address/ IP pool ending Address:** Whenever there is a request, the DHCP server will automatically allocate an unused IP address from the IP address pool to the requesting computer. You must specify the starting and ending address of the IP address pool.
3. **Domain Name:** Optional, this information will be passed to the client. press “More>>” button into the other settings :

**DHCP Server**

Item	Setting
DHCP Server	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
IP Pool Starting Address	<input type="text" value="100"/>
IP Pool Ending Address	<input type="text" value="199"/>
Domain Name	<input type="text"/>
Primary DNS	<input type="text" value="0.0.0.0"/>
Secondary DNS	<input type="text" value="0.0.0.0"/>
Primary WINS	<input type="text" value="0.0.0.0"/>
Secondary WINS	<input type="text" value="0.0.0.0"/>
Gateway	<input type="text" value="0.0.0.0"/> (optional)

Save Undo Clients List... Help

4. **Primary DNS/Secondary DNS:** This feature allows you to assign DNS Servers
5. **Primary WINS/Secondary WINS:** This feature allows you to assign WINS Servers
6. **Gateway:** The Gateway Address would be the IP address of an alternate Gateway. This function enables you to assign another gateway to your PC, when DHCP server offers an IP to your PC. press “Client List >” button into client list page

**DHCP Clients List**

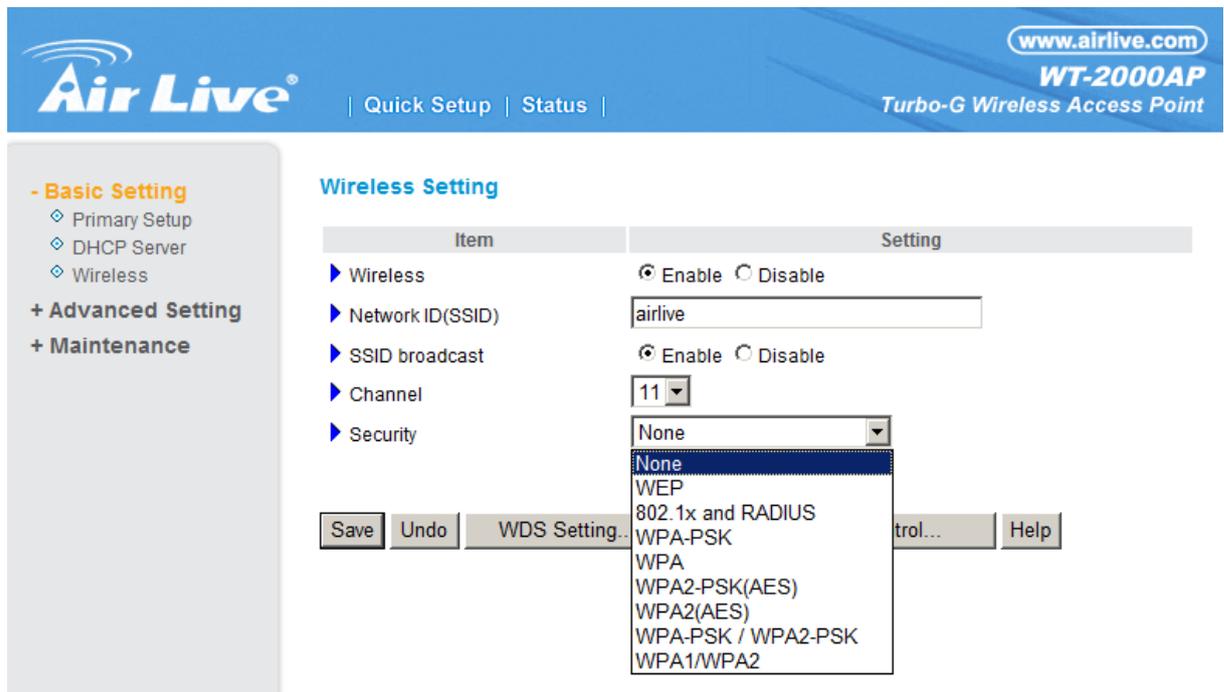

IP Address	Host Name	MAC Address	Select
<input type="button" value="Wake up"/> <input type="button" value="Delete"/> <input type="button" value="Back"/> <input type="button" value="Refresh"/>			

### 4.6.3 Wireless Setting, 802.1X setting and WDS

Wireless settings allow you to set the wireless configuration items.

1. **Wireless** : The user can enable or disable wireless function.
2. **Network ID (SSID)**: Network ID is used for identifying the Wireless LAN (WLAN). Client stations can roam freely over this product and other Access Points that have the same Network ID. (The factory setting is “default”)
3. **Channel**: The radio channel number. The permissible channels depend on the Regulatory Domain. The factory setting is as follows: **channel 6** for North America; **channel 7** for European (ETSI); **channel 7** for Japan.

4. **WEP Security**: Select the data privacy algorithm you want. Enabling the security can protect your data while it is transferred from one station to another. The standardized IEEE 802.11 WEP (128 or 64-bit) is used here.
5. **WEP Key 1, 2, 3 & 4**: When you enable the 128 or 64 bit WEP key security, please select one WEP key to be used and input 26 or 10 hexadecimal (0, 1, 2...8, 9, A, B...F) digits.
6. **Pass-phrase Generator**: Since hexadecimal characters are not easily remembered, this device offers a conversion utility to convert a simple word or phrase into hex.

## 7. 802.1X Setting

The screenshot shows the AirLive WT-2000AP web interface. The top navigation bar includes the AirLive logo, 'Quick Setup | Status', and the website 'www.airlive.com'. The page title is 'WT-2000AP Turbo-G Wireless Access Point'. On the left, there is a sidebar with 'Basic Setting' (Primary Setup, DHCP Server, Wireless), '+ Advanced Setting', and '+ Maintenance'. The main content area is titled 'Wireless Setting' and contains a table of configuration items:

Item	Setting
Wireless	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Network ID(SSID)	<input type="text" value="airlive"/>
SSID broadcast	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Channel	<input type="text" value="11"/>
Security	<input type="text" value="802.1x and RADIUS"/>
Encryption Key Length	<input checked="" type="radio"/> 64 bits <input type="radio"/> 128 bits
RADIUS Server IP	<input type="text" value="0.0.0.0"/>
RADIUS port	<input type="text" value="1812"/>
RADIUS Shared Key	<input type="text"/>

At the bottom of the page, there are buttons for 'Save', 'Undo', 'WDS Setting...', 'MAC Address Control...', and 'Help'.

### 802.1X

Check Box was used to switch the function of the 802.1X. When the 802.1X function is enabled, the Wireless user must **authenticate** to this router first to use the Network service.  
RADIUS Server

IP address or the 802.1X server's domain-name.  
RADIUS Shared Key

Key value shared by the RADIUS server and this router. This key value is consistent with the key value in the RADIUS server.

### WPA-PSK

1. Select Encryption and Preshare Key Mode

If you select HEX, you have to fill in 64 hexadecimal (0, 1, 2...8, 9, A, B...F) digits

If ASCII, the length of preshare key is from 8 to 63.

2. Fill in the key, Ex 12345678

If you select HEX, you have to fill in 64 hexadecimal (0, 1, 2...8, 9, A, B...F) digits

If ASCII, the length of Pre-share key is from 8 to 63.

2. Fill in the key, Ex 12345678

### WPA2(AES)

Check Box was used to switch the function of the WPA. When the WPA function is enabled, the Wireless user must **authenticate** to this router first to use the Network service. RADIUS Server

IP address or the 802.1X server's domain-name.

Select RADIUS Shared Key

If you select HEX, you have to fill in 64 hexadecimal (0, 1, 2...8, 9, A, B...F) digits

If ASCII, the length of Pre-share key is from 8 to 63.

Key value shared by the RADIUS server and this router. This key value is consistent with the key value in the RADIUS server.

## WPA/WPA2

Check Box was used to switch the function of the WPA. When the WPA function is enabled, the Wireless user must **authenticate** to this router first to use the Network service. RADIUS Server

The router will detect automatically which Security type(Wpa-psk version 1 or 2) the client uses to encrypt.

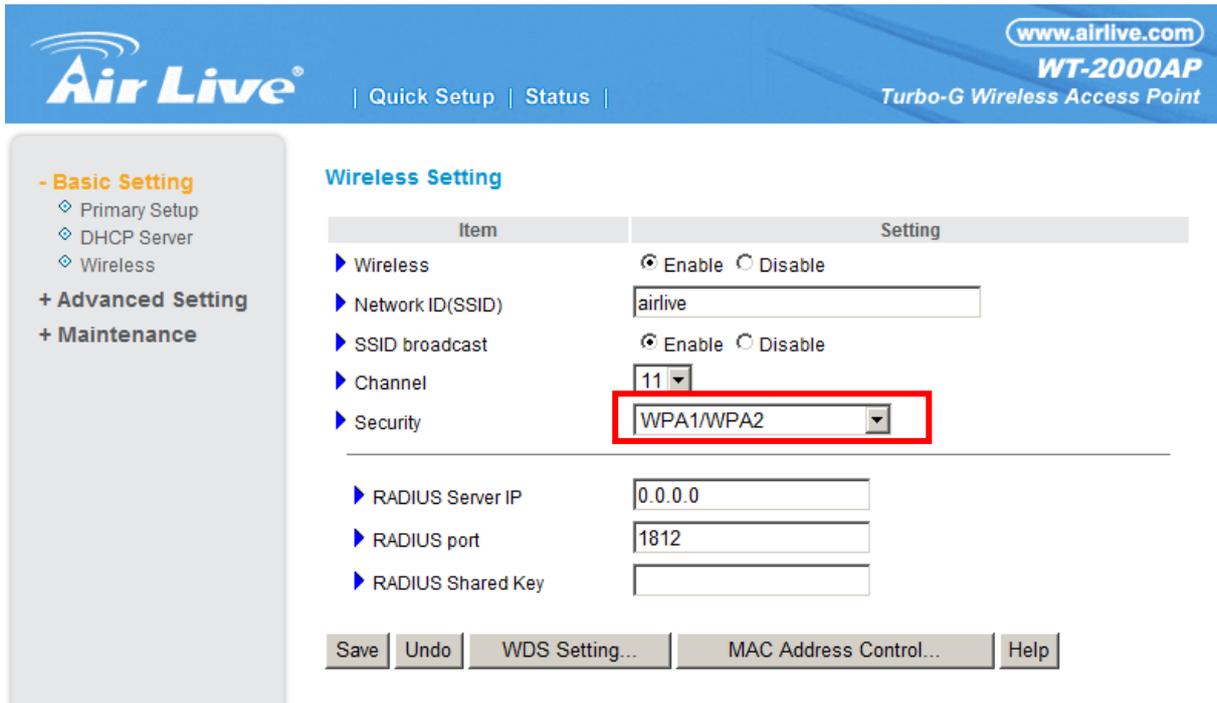

IP address or the 802.1X server's domain-name.

Select RADIUS Shared Key

If you select HEX, you have to fill in 64 hexadecimal (0, 1, 2...8, 9, A, B...F) digits

If ASCII, the length of Pre-share key is from 8 to 63.

Key value shared by the RADIUS server and this router. This key value is consistent with the key value in the RADIUS server.

The screenshot shows the web interface for the AirLive WT-2000AP Turbo-G Wireless Access Point. The top navigation bar includes the AirLive logo, links for Quick Setup and Status, and the website www.airlive.com. The main content area is titled "Wireless Setting" and contains a table of configuration items:

Item	Setting
Wireless	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Network ID(SSID)	airlive
SSID broadcast	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Channel	11
Security	WPA1/WPA2
RADIUS Server IP	0.0.0.0
RADIUS port	1812
RADIUS Shared Key	

At the bottom of the page, there are buttons for Save, Undo, WDS Setting..., MAC Address Control..., and Help. The Security dropdown menu is highlighted with a red box in the original image.

## WDS(Wireless Distribution System)

WDS operation as defined by the IEEE802.11 standard has been made available. Using WDS it is possible to wirelessly connect Access Points, and in doing so extend a wired infrastructure to locations where cabling is not possible or inefficient to implement.

| Quick Setup | Status |

**- Basic Setting**

- ◇ Primary Setup
- ◇ DHCP Server
- ◇ Wireless

**+ Advanced Setting**

**+ Maintenance**

### MAC Address Control

Item	Setting
▶ MAC Address Control	<input type="checkbox"/> Enable
<input type="checkbox"/> Connection control	Wireless and wired clients with <b>C</b> checked can connect to this device; and <input type="text" value="allow"/> unspecified MAC addresses to connect.
<input type="checkbox"/> Association control	Wireless clients with <b>A</b> checked can associate to the wireless LAN; and <input type="text" value="deny"/> unspecified MAC addresses to associate.

ID	MAC Address	IP Address	C	A
1	<input style="width: 100%;" type="text"/>	192.168.0. <input style="width: 50%;" type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	<input style="width: 100%;" type="text"/>	192.168.0. <input style="width: 50%;" type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	<input style="width: 100%;" type="text"/>	192.168.0. <input style="width: 50%;" type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	<input style="width: 100%;" type="text"/>	192.168.0. <input style="width: 50%;" type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>

MAC Address Control allows you to assign different access right for different users and to assign a specific IP address to a certain MAC address.

**MAC Address Control** Check "Enable" to enable the "MAC Address Control". All of the settings in this page will take effect only when "Enable" is checked.

**Connection control** Check "Connection control" to enable the controlling of which wired and wireless clients can connect to this device. If a client is denied to connect to this device, it means the client can't access to the Internet either. Choose

"allow" or "deny" to allow or deny the clients, whose MAC addresses are not in the "Control table" (please see below), to connect to this device.

**Association control** Check "Association control" to enable the controlling of which wireless client can associate to the wireless LAN. If a client is denied to associate to the wireless LAN, it means the client can't send or receive any data via this device. Choose "allow" or "deny" to allow or deny the clients, whose MAC addresses are not in the "Control table", to associate to the wireless LAN.

**Control table**

ID	MAC Address	IP Address	C	A
1	<input type="text"/>	192.168.0. <input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="text"/>	192.168.0. <input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="text"/>	192.168.0. <input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="text"/>	192.168.0. <input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>

DHCP clients  Copy to ID

- "Control table" is the table at the bottom of the "MAC Address Control" page. Each row of this table indicates the MAC address and the expected IP address mapping of a client. There are four columns in this table:

<b>MAC Address</b>	MAC address indicates a specific client.
<b>IP Address</b>	Expected IP address of the corresponding client. Keep it empty if you don't care its IP address.
<b>C</b>	When " <b>Connection control</b> " is checked, check " <b>C</b> " will allow the corresponding client to connect to this device.
<b>A</b>	When " <b>Association control</b> " is checked, check " <b>A</b> " will allow the corresponding client to associate to the wireless LAN.

In this page, we provide the following Combobox and button to help you to input the MAC address.

DHCP clients  Copy to ID

You can select a specific client in the "DHCP clients" Combobox, and then click on the "Copy to" button to copy the MAC address of the client you select to the ID selected in the "ID" Combobox.

**Previous page and Next Page**

To make this setup page simple and clear, we have divided the "Control table" into several pages. You can use these buttons to navigate to different pages.

You can change Password here. We **strongly** recommend you to change the system password for security reason.

## 4.8.2 View Log

The screenshot shows the AirLive WT-2000AP web interface. The top navigation bar includes the AirLive logo, navigation links for 'Quick Setup' and 'Status', and the website 'www.airlive.com'. The device model 'WT-2000AP' and 'Turbo-G Wireless Access Point' are also displayed. On the left, a sidebar menu shows 'Maintenance' selected, with 'View Log' highlighted. The main content area is titled 'System Log' and displays the following information:

Display time: Tue Feb 01 00:01:36 2005  
2008年3月28日 下午 04:02:04 TX TCP reset for 192.168.0.71(50783) -> 192.168.0.242(80)

At the bottom of the log area, there are four buttons: 'Back', 'Refresh', 'Download', and 'Clear logs'.

You can View system log by clicking the **View Log** button

## 4.8.3 Firmware Upgrade

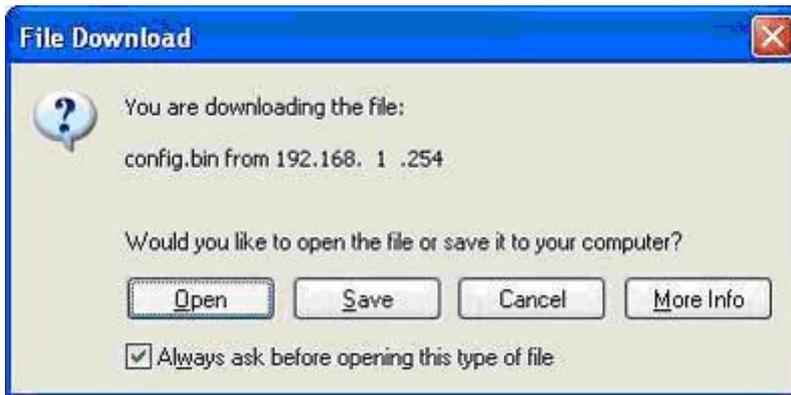

The screenshot shows the AirLive WT-2000AP web interface for the Firmware Upgrade page. The top navigation bar is identical to the previous screenshot. The sidebar menu shows 'Maintenance' selected, with 'Firmware Upgrade' highlighted. The main content area is titled 'Firmware Upgrade' and features a 'Firmware Filename' label above a text input field. To the right of the input field is a '瀏覽...' (Browse) button. Below the input field, the following text is displayed:

Current firmware version is R1.97g4e-R61\_0225. The upgrade procedure takes about 20 seconds.  
Note! Do not power off the unit when it is being upgraded. When the upgrade is done successfully, the unit will be restarted automatically.

At the bottom of the page, there are two buttons: 'Upgrade' and 'Cancel'.

You can upgrade firmware by clicking **Firmware Upgrade** button.

#### 4.8.4 Backup Setting

You can backup your settings by clicking the **Backup Setting** button and save it as a bin file. Once you want to restore these settings, please click **Firmware Upgrade** button and use the bin file you saved.

#### 4.8.5 Reset to default

You can also reset this product to factory default by clicking the **Reset to default** button.

#### 4.8.6 Reboot

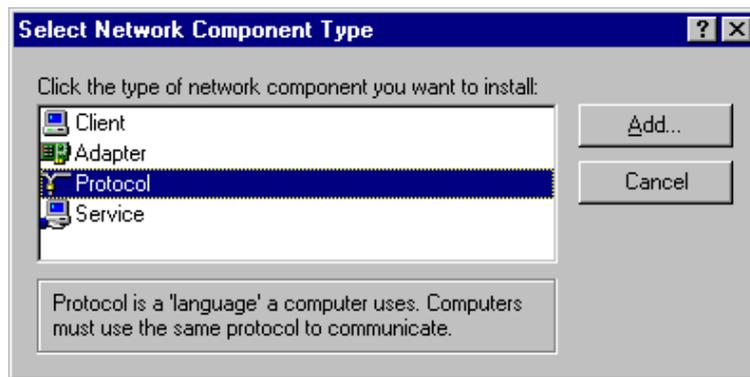

You can also reboot this product by clicking the **Reboot** button.

# Appendix A TCP/IP Configuration for Windows 95/98

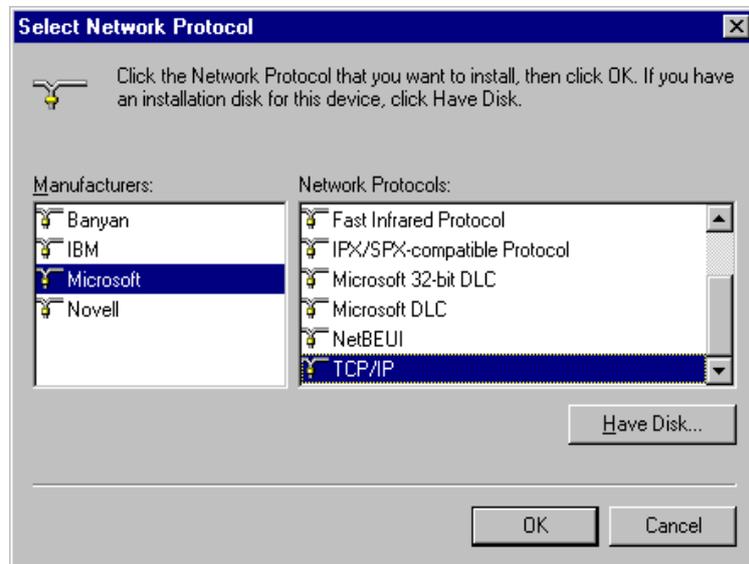

This section introduces you how to install TCP/IP protocol into your personal computer. And suppose you have been successfully installed one network card on your personal computer. If not, please refer to your network card manual. Moreover, the Section B.2 tells you how to set TCP/IP values for working with this NAT Router correctly.

## A.1 Install TCP/IP Protocol into Your PC

1. Click **Start** button and choose **Settings**, then click **Control Panel**.
2. Double click **Network** icon and select **Configuration** tab in the Network window.
3. Click **Add** button to add network component into your PC.
4. Double click **Protocol** to add TCP/IP protocol.

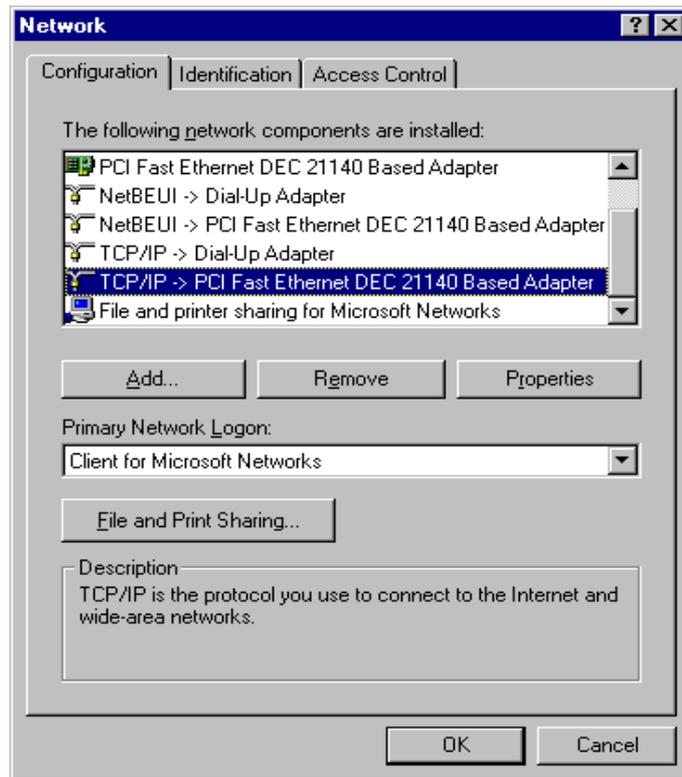

5. Select **Microsoft** item in the manufacturers list. And choose **TCP/IP** in the Network Protocols. Click **OK** button to return to Network window.

6. The TCP/IP protocol shall be listed in the Network window. Click **OK** to complete the install procedure and restart your PC to enable the TCP/IP protocol.

## A.2 Set TCP/IP Protocol for Working with NAT Router

1. Click **Start** button and choose **Settings**, then click **Control Panel**.
2. Double click **Network** icon. Select the TCP/IP line that has been associated to your network card in the **Configuration** tab of the Network window.

3. Click **Properties** button to set the TCP/IP protocol for this NAT Router.
4. Now, you have two setting methods:

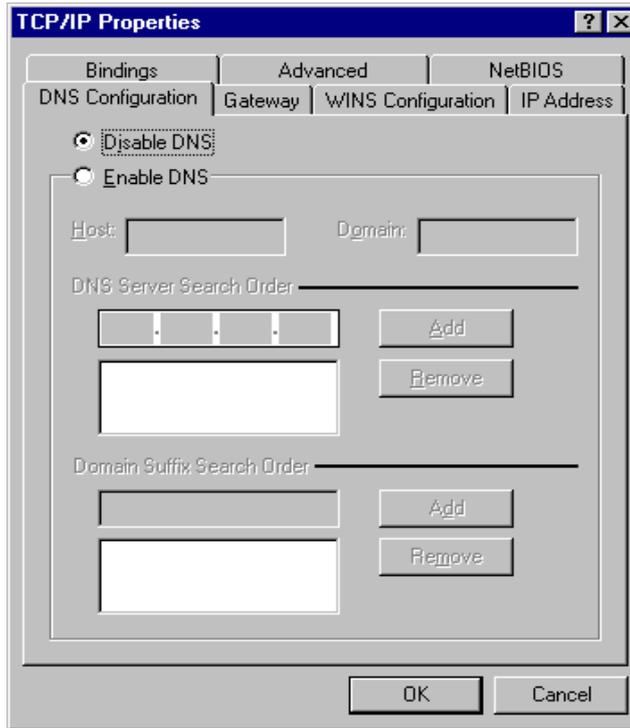

- a. Select **Obtain an IP address automatically** in the IP Address tab.

- b. Don't input any value in the Gateway tab.

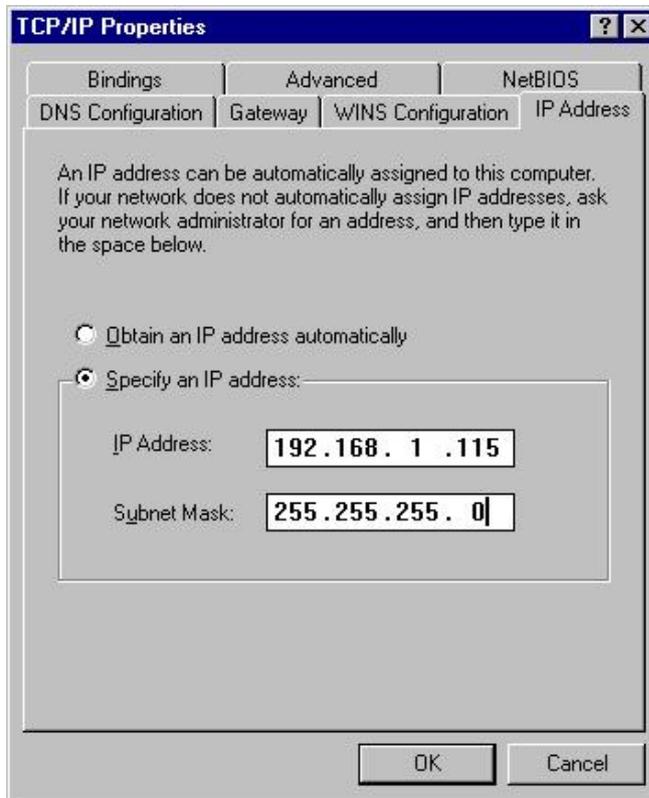

- c. Choose **Disable DNS** in the DNS Configuration tab.

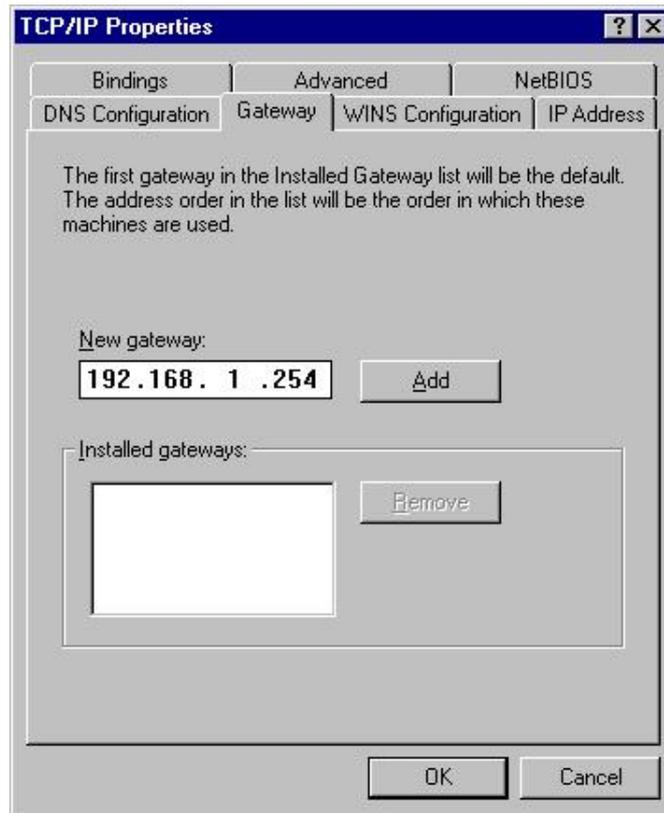

B. Configure IP manually

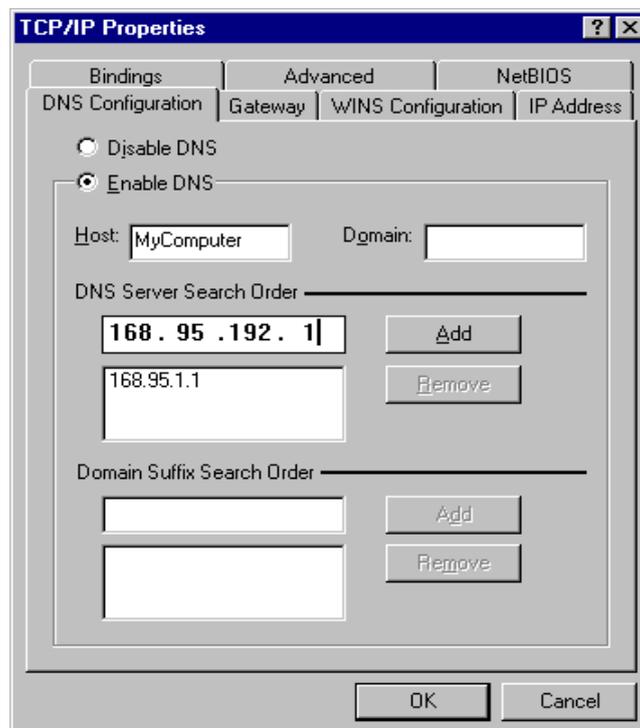

- a. Select **Specify an IP address** in the IP Address tab. The default IP address of this product is 192.168.1.254. So please use 192.168.1.xxx (xxx is between 1 and 253) for IP Address field and 255.255.255.0 for Subnet Mask field.

- b. In the Gateway tab, add the IP address of this product (default IP is 192.168.1.254) in the New gateway field and click **Add** button.

- c. In the DNS Configuration tab, add the DNS values which are provided by the ISP into DNS Server Search Order field and click **Add** button.

# Appendix B 802.1x Setting

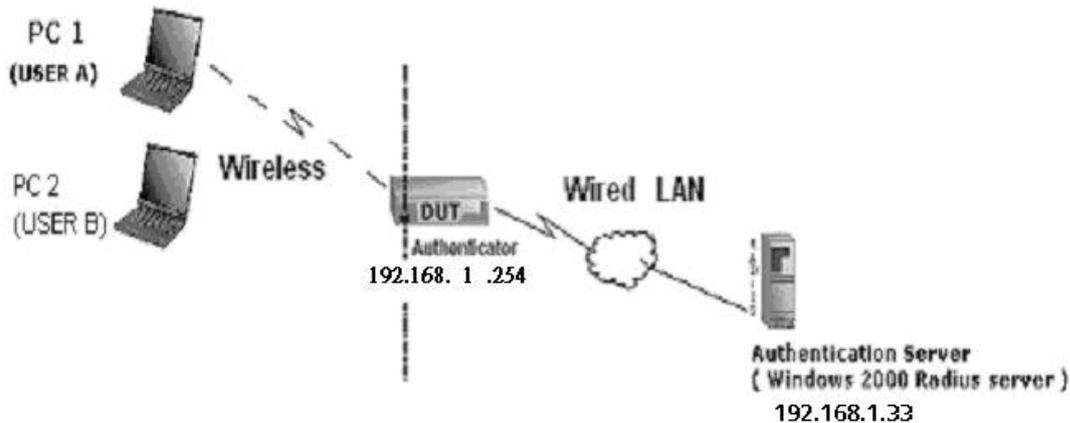

Figure 1: Testing Environment (Use Windows 2000 Radius Server)

## 1 Equipment Details

### PC1:

Microsoft Windows XP Professional without Service Pack 1.

AMIT 531C Wireless Cardbus:3.0.3.0

Driver version:

### PC2:

Microsoft Windows XP Professional with Service Pack 1a or latter.

AMIT 561C Wireless Cardbus:1.0.1.0

Driver version: 1.7.29.0 (Driver date: 10.20.2001)

Authentication Server: Windows 2000 RADIUS server with Service Pack 3 and HotFix Q313664.

**Note.** Windows 2000 RADIUS server only supports PEAP after upgrade to service pack 3 and HotFix Q313664 (You can get more information from

<http://support.microsoft.com/default.aspx?scid=kb;en-us;313664>)

## 2 DUT

### Configuration:

- 1.Enable DHCP server.
- 2.LAN IP address: 192.168.1.254/24.
- 3.Set RADIUS server IP.
- 4.Set RADIUS server shared key.
- 5.Configure WEP key and 802.1X setting.

The following test will use the inbuilt 802.1X authentication method such as ,EAP\_TLS, PEAP\_CHAPv2(Windows XP with SP1 only), and PEAP\_TLS(Windows XP with SP1 only) using the Smart Card or other Certificate of the Windows XP Professional.

## 3. DUT and Windows 2000 Radius Server Setup

### 3-1-1. Setup Windows 2000 RADIUS Server

We have to change authentication method to MD5\_Challenge or using smart card or other certificate on RADIUS server according to the test condition.

### 3-1-2. Setup DUT

1. Enable the 802.1X (check the "Enable checkbox").
2. Enter the RADIUS server IP.
3. Enter the shared key. (The key shared by the RADIUS server and DUT).
4. We will change 802.1X encryption key length to fit the variable test condition.

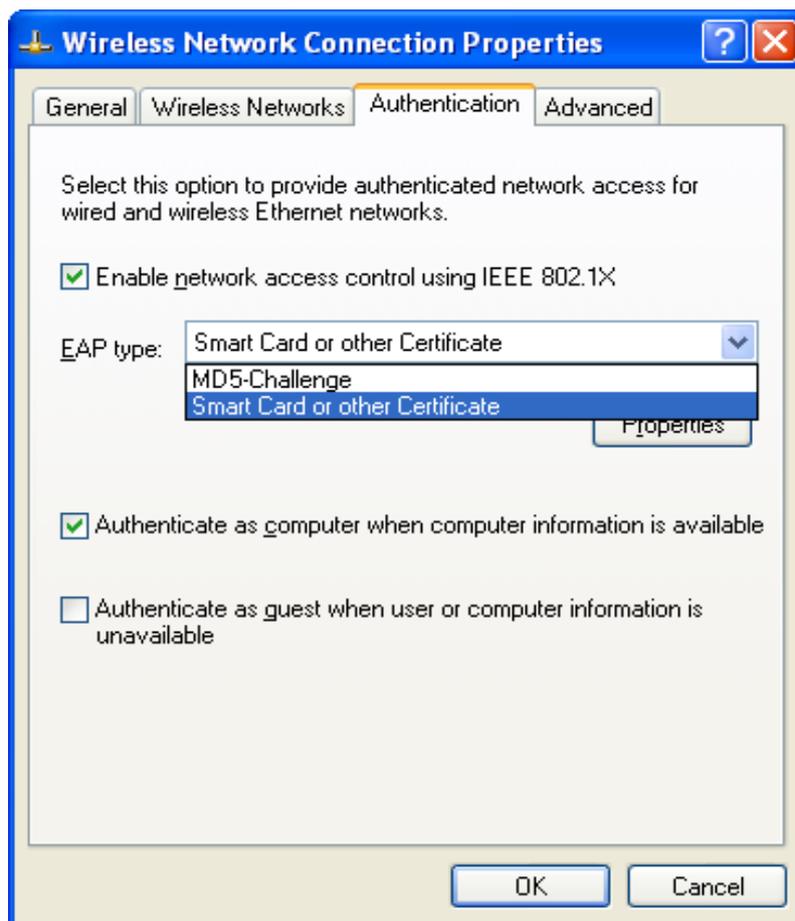

### 3-1-3. Setup Network adapter on PC

1. Choose the IEEE802.1X as the authentication method. (Fig 2)

#### Note.

Figure 2 is a setting picture of Windows XP without service pack 1. If users upgrade to service pack 1, then they can't see MD5-Challenge from EAP type list any more, but they will get a new Protected EAP (PEAP) option.

2. Choose MD5-Challenge or Smart Card or other Certificate as the EAP type.
3. If choosing use smart card or the certificate as the EAP type, we select to use a certificate on this computer. (Fig 3)
4. We will change EAP type to fit the variable test condition.

**Figure 2: Enable IEEE 802.1X access control**

#### 4. Windows 2000 RADIUS server Authentication testing:

4.1 DUT authenticate PC1 using certificate. (PC2 follows the same test procedures.)

1. Download and install the certificate on PC1. (Fig 4)
2. PC1 choose the SSID of DUT as the Access Point.
3. Set authentication type of wireless client and RADIUS server both to EAP\_TLS.
4. Disable the wireless connection and enable again.
5. The DUT will send the user's certificate to the RADIUS server, and then send the message of authentication result to PC1. (Fig 5)
6. Windows XP will prompt that the authentication process is success or fail and end the authentication procedure. ( Fig 6)
7. Terminate the test steps when PC1 get dynamic IP and PING remote host successfully.

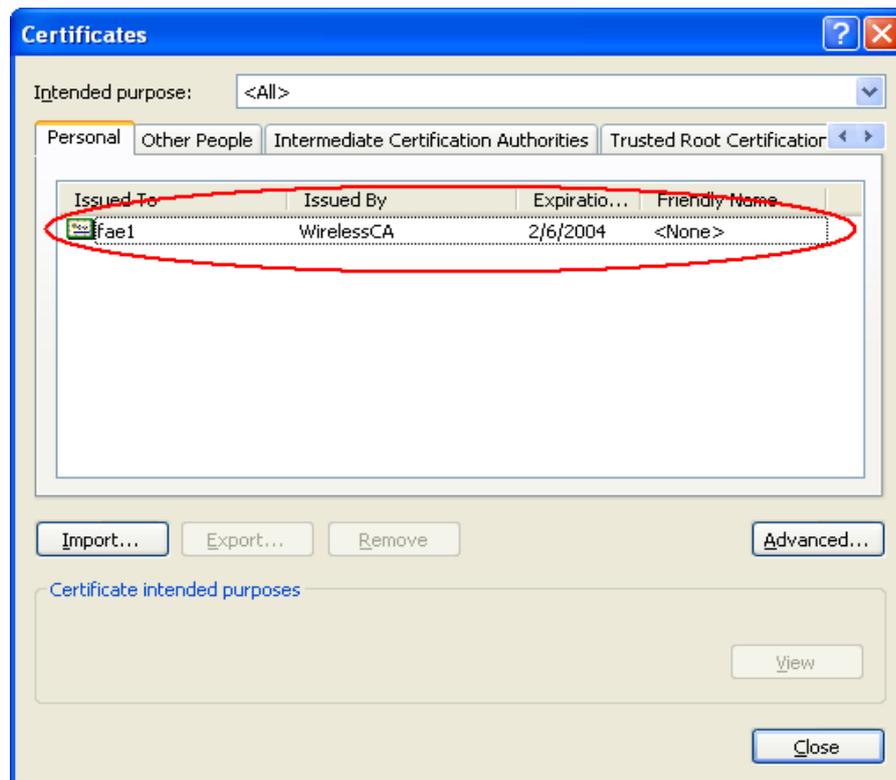

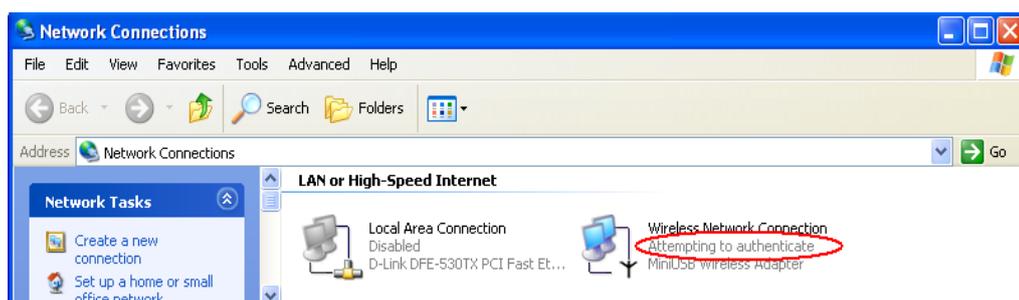

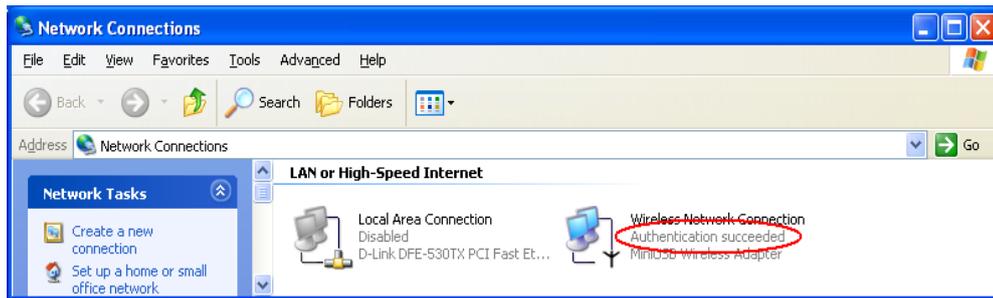

Figure 4: Certificate information on PC1

**Figure 5: Authenticating**

**Figure 6: Authentication success**

**4.2DUT authenticate PC2 using PEAP-TLS.**

1. PC2 choose the SSID of DUT as the Access Point.
2. Set authentication type of wireless client and RADIUS server both to PEAP\_TLS.
3. Disable the wireless connection and enable again.
4. The DUT will send the user's certificate to the RADIUS server, and then send the message of authentication result to PC2.
5. Windows XP will prompt that the authentication process is success or fail and end the authentication procedure.
6. Terminate the test steps when PC2 get dynamic IP and PING remote host successfully.

**Support Type: The AP supports the types of 802.1x Authentication: PEAP-CHAPv2 and PEAP-TLS.**

**Note:**

1. PC1 is on Windows XP platform without Service Pack 1.
2. PC2 is on Windows XP platform with Service Pack 1a.
3. PEAP is supported on Windows XP with Service Pack 1 only.
4. Windows XP with Service Pack 1 allows 802.1x authentication only when data encryption function is enable.

# Appendix C WDS Setting

## How to setup and work:

First, check the Wlan-mac address of AP1,AP2 and AP3.Please goto command mode and use "Arp -a".

If you can not find the information of Mac, please make the cable to plug in lan-port of ap and ping the lan ip address then arp -a. There are some information in the screen. For example:

```
C:\>ping 192.168.122.217

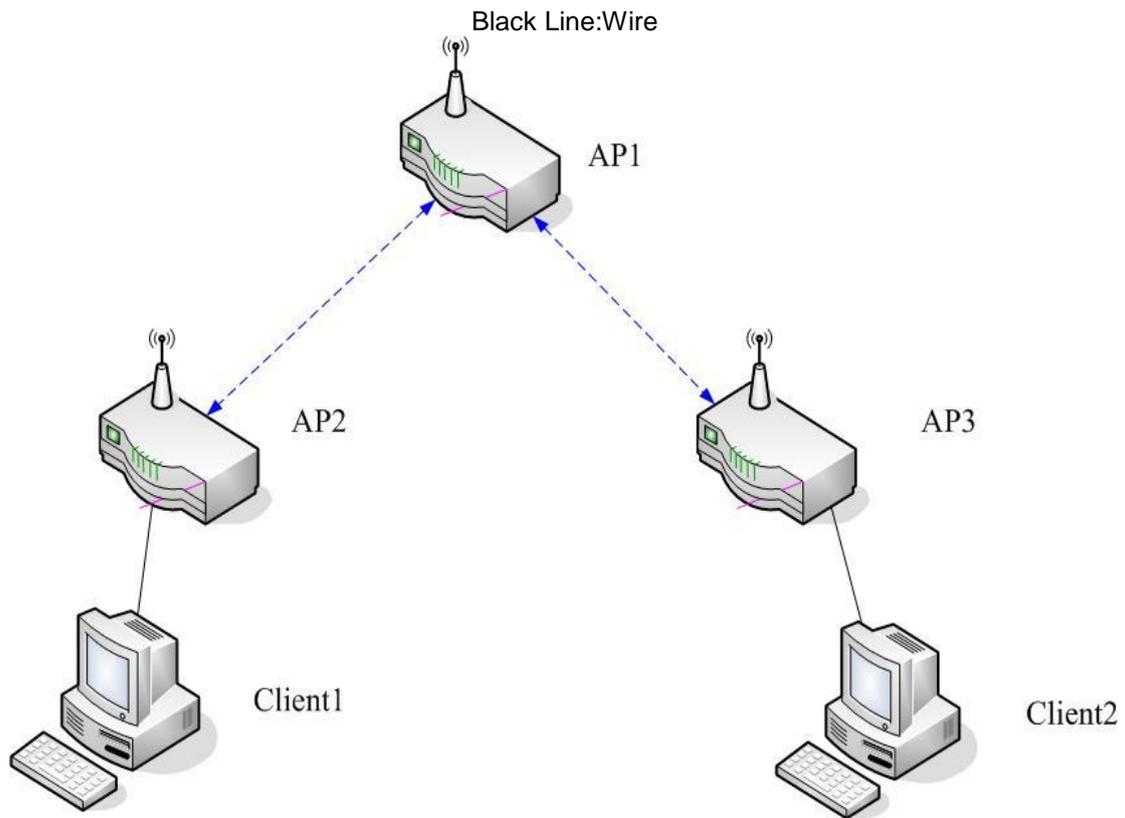

Pinging 192.168.122.217 with 32 bytes of data:

Reply from 192.168.122.217: bytes=32 time<10ms TTL=64

Ping statistics for 192.168.122.217:
    Packets: Sent = 1, Received = 1, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average = 0ms
Control-C
^C
C:\>arp -a

Interface: 192.168.122.14 on Interface 0x10000003
    Internet Address      Physical Address      Type
    192.168.122.3        00-50-fc-3f-cc-ed    dynamic
    192.168.122.217     00-50-18-00-0f-d9    dynamic
```

AP 1:	AP2:	AP3:
IP:192.168.1.254	IP:192.168.1.253	IP:192.168.1.252
Mac:00-50-18-00-0f-fe	Mac:00-50-18-00-0f-fd	Mac:00-50-18-00-0f-fc
SSID:Default	SSID:Default	SSID:Default
Channel:11	Channel:11	Channel:11
Dhcp Server:Enable		

If the Settings are ok, the client1 and client2 can get ip from dhcp server of AP1. Then Client1 and Client2 can get information each other.

# Appendix D FAQ and Troubleshooting

How do I connect AP by using wireless?

## 1.How to start to use wireless?

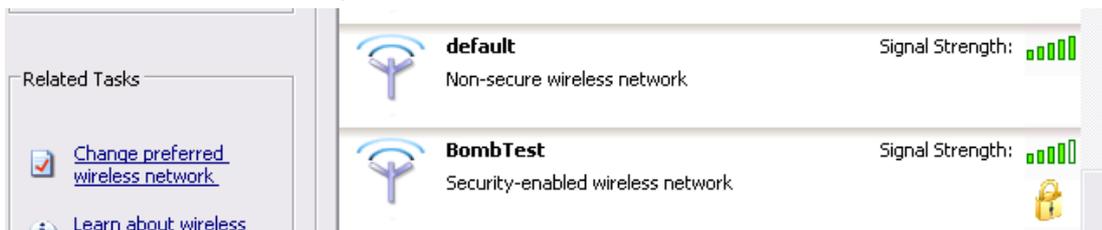

**A:** First, make sure that you already installed wireless client device in your computer. Then check the Configuration of wireless router. The default is as below:

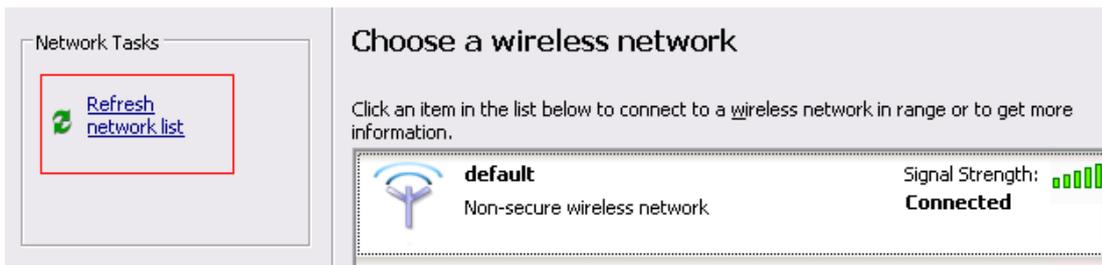

About wireless client, you will see wireless icon:

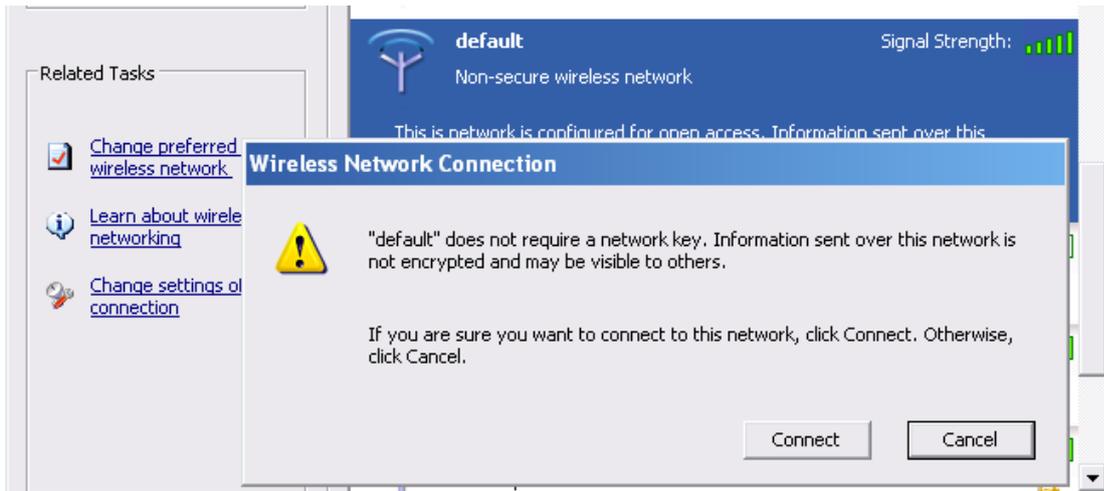

Then click and will see the ap list that wireless client can be accessed:

If the client can not access your wireless router, please refresh network list again. However, I still can not find the device which ssid is "default", please refer to Q3.

Choose the one that you will want to connect and Connect:

If successfully, the computer will show

and get ip from router:

**2. When I use AES encryption of WPA-PSK to connect even if I input the correct pre-share key?**

**A:** First, you must check if the driver of wireless client supports AES encryption. Please refer to the below:

If SSID is default and click “Properties” to check if the driver of wireless client supports AES encryption.
