Safety Precautions

Warning!

Before using the device, read the following safety precautions. ZTE bears no liability to the consequences incurred by violation of the safety instructions.

Usage Cautions

- Read all the safety cautions carefully before using the device.
- Only use the accessories included in the package, such as power supply adapter and battery.
- Do not extend the power cord, otherwise the device will not work.
- The power supply voltage must meet the requirements of the device input voltage (The voltage fluctuation range is less than 10%).
- Keep the power plug clean and dry to prevent any risk of electric shock or other dangers.
- Disconnect all the cables during a lightning storm to prevent the device from damage.
- Power off and unplug the power plug when the device is not in use for a long time.
- Do not attempt to open the covers of the device. It is dangerous to do so when the device is powered ON.
- Do not directly stare at the optical interface to prevent any eye injuries.
- Power off and stop using the device under the conditions such as, abnormal sound, smoke, and strange smell. Contact the service provider for maintenance if the device is faulty.

Environment Requirements

- Ensure proper ventilation to the device. Place the device away from direct sunlight.
- Keep the device ventilated and dry. Never spill any liquid on the device.
- Do not place any object on the device to prevent any deformation or damage to the device.
- Do not place the device near any source of heat or water.
- Keep the device away from any household appliances with strong magnetic or electric fields, such as microwave oven and refrigerator.

Cleaning Requirements

- Before cleaning, power off the device, and unplug all the cables connected to the device, such as power cable, optical fiber, and Ethernet cable.
- Do not use any liquid or spray to clean the device. Use a soft dry cloth.

Environment Protection

- Do not dispose the device or battery improperly.
- Observe the local regulations about the equipment disposal or treatment.

Environmental Information

The equipment you purchased has required the extraction and use of natural resources for its production. It may contain substances that are hazardous to people's health and to the environment. To avoid putting such substances into our environment and to reduce pressure on our natural resources, we ask that you reuse or recycle your end-of-life equipment by using an accredited electronics take-back system.

The symbols below indicate that this product should be reused or recycled and not simply discarded. Please locate and use an appropriate reuse and recycling site.

If you need more information on collection, reuse and recycling systems, contact your local or regional waste administration. You may also contact your equipment provider for more information on the environmental performances of these products.

Chapter 1

Product Overview

Table of Contents

Interfaces and Buttons	1-1
Indicator	1-2
Cable Connection.....	1-3

1.1 Interfaces and Buttons

The product is targeted to provide 24-hours continuous triple-play services, including VOIP. Figure 1-1 shows the interfaces and buttons on the back panel of the ZXHN H267N device.

Figure 1-1 The Back Panel

Table 1-1 describes the interfaces and buttons on the back panel and side panel of the ZXHN H267N device.

Table 1-1 Interfaces and Buttons

Interface/Button	Description
ON/OFF	Power switch
Power	12 V DC power connector
Phone1/Phone2	RJ-11 telephone interface, connected to the telephone with RJ-11 telephone cable.
LAN1/LAN2/LAN3	RJ-45 FE Ethernet interface
LAN4/WAN	RJ-45 GE Ethernet interface, WAN interface is optional.
DSL	RJ-11 DSL interface
Reset	Reset button When the power is on, use a needle to press the button for over 2 seconds to restore the default settings.
WLAN	WLAN button Enable/disable the WLAN function.

Interface/Button	Description
WPS	WPS button Enable/disable the Wi-Fi protection. When the Wi-Fi protection is enabled, users can access the network automatically.
USB	USB 2.0 interface

- The USB interface is on a side of the ZXHN H267N.

1.2 Indicator

Figure 1-2 shows the indicators on the front panel of the ZXHN H267N unit.

Figure 1-2 The Front Panel

Table 1-2 describes the indicators on the front panel of the ZXHN H267N unit.

Table 1-2 Descriptions of Indicators

LED Indicator	Status	Description
Power	Solid green	The ZXHN H267N is powered ON.
	OFF	The ZXHN H267N is powered OFF.
DSL	Solid green	DSL synchronization is normal and the link connection is normal.
	Fast Flashing	Now in the handshaking process to establish the link connection.
	Slowly Flashing	Physical link exists, however carrier wave has not been detected.
	OFF	Link has not been established.
Internet	Solid green	The connection is established and a correct IP address is obtained.
	Flashing	Currently in data transmission.
	OFF	Internet connection is not established, or the ZXHN H267N is switched off.

LED Indicator	Status	Description
WLAN	Solid green	The WLAN RF switch is on.
	Flashing green	Currently in data transmission. Flashing frequency indicates WiFi network traffic.
	Solid red	WPS access is successful. This solid-on light will be automatically off after 5 minutes.
	Fast flashing red	The WPS accessing of the WLAN terminal is faulty.
	Slowly flashing red	WLAN terminal is in WPS accessing process.
	OFF	The WLAN RF switch is off.
LAN1 ~ LAN4	Solid green	LAN connection has been established.
	Flashing	Data transmission is in processing. The indicator flashes according to the LAN traffic.
	OFF	LAN connection has not been established.
Phone1 ~ Phone2	Solid green	The ZXHN H267N has registered on the VoIP network.
	Flashing	Indicates when the associated telephone is off-hook.
	OFF	The ZXHN H267N has not been registered on the VOIP network.
USB	Solid green	The USB device is connected.
	Flashing	Currently in data transmission.
	OFF	No USB device.

1.3 Cable Connection

Figure 1-3 shows the devices that are connected to interfaces of the ZXHN H267N device.

Figure 1-3 Cable Connection

This page intentionally left blank.

Chapter 2

Configuration Preparation

This manual uses the Windows operating system as an example for describing how to configure the ZXHN H267N. Before configuring the ZXHN H267N, you need to perform the following operations:

- Ensure that a crossover or straight-through Ethernet cable connects a computer to the device.
- Ensure that the [TCP/IP](#) configuration on the computer is correct.
- Stop any firewall or other security software operating on the computer.
- Disable the proxy setting of Internet Explorer.

Table of Contents

Configure TCP/IP	2-1
Login	2-2

2.1 Configure TCP/IP

To log in to the ZXHN H267N on a computer, you need to set the [IP](#) address of the computer to ensure that the [IP](#) address of the computer and the maintenance [IP](#) address of the ZXHN H267N are in the same network segment.

Context

The default maintenance [IP](#) address of the ZXHN H267N is as follows:

- [IP](#) address: 192.168.1.1
- Subnet mask: 255.255.255.0
- Default gateway: 192.168.1.1

Steps

1. Use an ethernet cable to connect a local computer to the [LAN](#) interface of the ZXHN H267N.
2. On the local computer, double-click **Local Area Connection** and click **Properties**. The **Local Area Connection Properties** dialog box is displayed.
3. Double-click **Internet Protocol (TCP/IP)**. The **Internet Protocol (TCP/IP) Properties** dialog box is displayed. Set the IP address to 192.168.1.200, subnet mask to 255.255.255.0, and default gateway to 192.168.1.1.
4. Click **OK**.

– End of Steps –

Follow-Up Action

After the IP address of the computer is set, you can run the **Ping** command to ping the IP address 192.168.1.1. If the ping operation is successful, it indicates that the TCP/IP configuration is correct and the computer is properly connected to the ZXHN H267N.

2.2 Login

The ZXHN H267N provides a Web-based configuration and management system. You can enter a specified IP address in the address bar of Internet explorer to access the system.

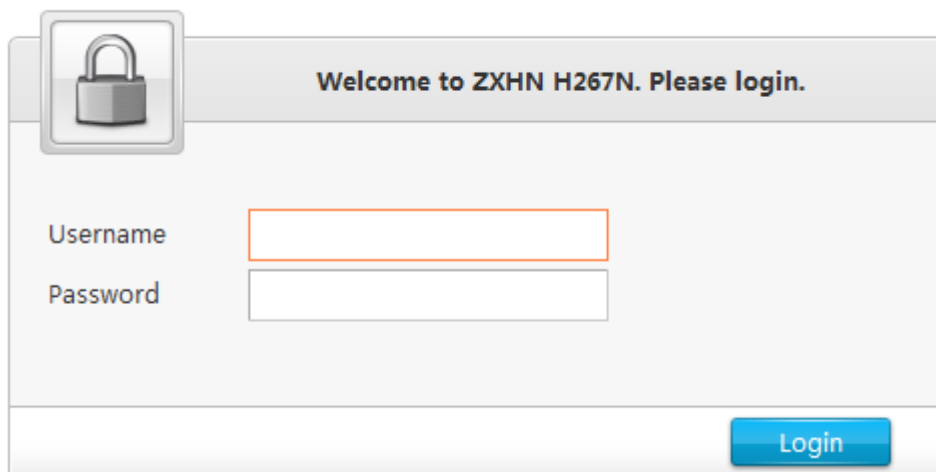

Prerequisite

A computer is directly connected to the ZXHN H267N, and their IP addresses are in the same network segment.

Steps

1. Open Internet explorer, and enter `http://192.168.1.1` (default maintenance IP address of the ZXHN H267N) in the address field. Press the **Enter** key. The login page is displayed, see [Figure 2-1](#).

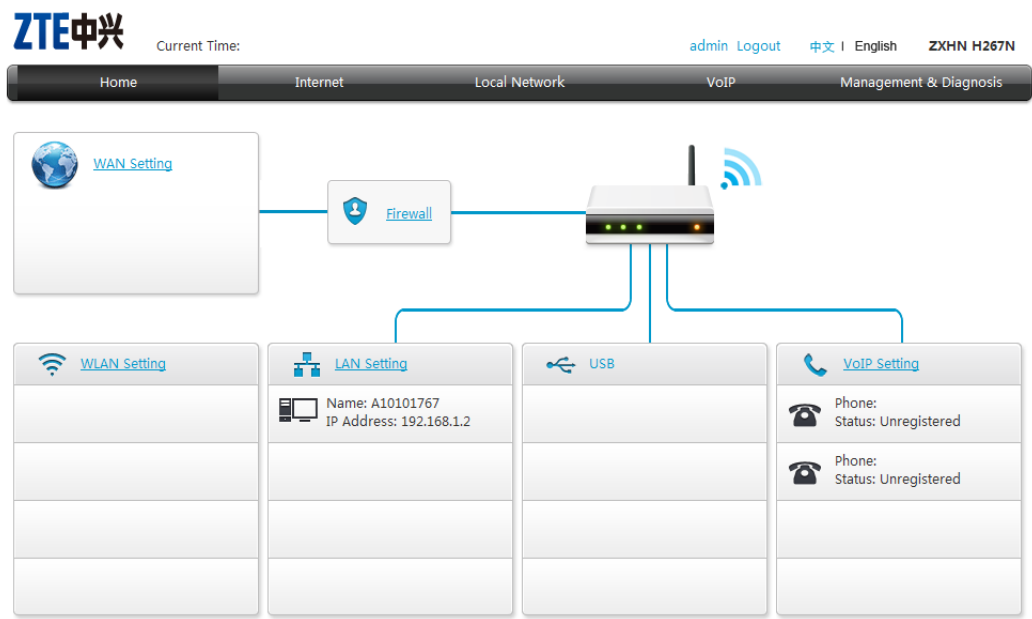

Figure 2-1 Login Page

The screenshot shows a web-based login interface. At the top, there is a grey banner with a padlock icon on the left and the text "Welcome to ZXHN H267N. Please login." in the center. Below the banner, there are two input fields: "Username" and "Password". The "Username" field is highlighted with an orange border. At the bottom right of the form, there is a blue button labeled "Login".

2. Enter your username and password (the default username and password of the administrator are admin) and click **Login**. The configuration page is displayed, see [Figure 2-2](#).

Figure 2-2 Configuration Page

– End of Steps –

This page intentionally left blank.

Chapter 3

Configure the Internet

Table of Contents

Check the Device Status	3-1
Configure the WAN	3-2
Configure the QoS.....	3-16
Configure the Security.....	3-22
Configure the DDNS.....	3-33
Configure the SNTP	3-34
Configure the Port Binding	3-35
Configure the Dynamic Routing.....	3-36
Configure the Multicast.....	3-37

3.1 Check the Device Status

The section describes the status of Internet. The relevant information of Internet status is shown as below.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Status > Ethernet** to go to the **Ethernet** page.

The page is shown in [Figure 3-1](#).

Figure 3-1 Internet Status

The screenshot displays the 'Internet Status' page for the ZXHN H267N. The 'Internet' tab is selected, and the 'Ethernet' sub-tab is active. The page shows the following information:

Page Information
The relevant information of Internet status (ethernet uplink) is shown as below.

Ethernet Interface Information

WAN	WAN
MAC Address	00:19:c6:50:9d:0c
Status	NoLink
Packets Received/Bytes Received	11301/716592
Packets Sent/Bytes Sent	1189/90502

Ethernet Connection Status

Connection Name	rer
Type	PPPoE
IP Version	IPv4
NAT Switch	On

A 'Refresh' button is located at the bottom right of the Ethernet Interface Information table.

- (Option) on the main page of the ZXHN H267N, select **Internet > Status > DSL** , the relevant information is shown.
- (Option) on the main page of the ZXHN H267N, select **Internet > Status > 4in6 Tunnel** , the relevant information is shown.
- (Option) on the main page of the ZXHN H267N, select **Internet > Status > 6in4 Tunnel** , the relevant information is shown.
- Click **Refresh** to refresh the information.

– End of Steps –

3.2 Configure the WAN

3.2.1 Configure the WAN Connection

This procedure describes how to configure a broadband connection (**WAN** connection) on the network side, so that user services (including the data, voice, and video services) can be connected to the external network.

The ZXHN H267N supports Route-based and Bridge-based WAN connections.

- Route-based connection
- Bridge-based connection

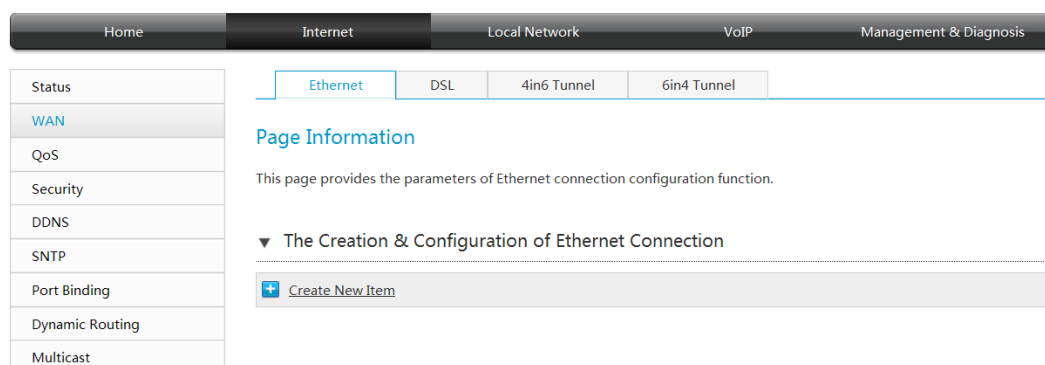

Prerequisite

Before configuring **Ethernet**, make sure that the radio button **ON (Management & Diagnosis > ETH Uplink Management)** is set and **Apply** button is pressed.

Steps

1. On the main page of the ZXHN H267N, select **Internet > WAN > Ethernet** to go to the **Ethernet** page, as shown in [Figure 3-2](#).

Figure 3-2 Ethernet Configuring page

2. Click **The Creation & Configuration of Ethernet Connection**.
3. Click **+ Create New Item** to go to the page of creating new **Ethernet** connection.

Route-based connection

4. Set the parameter **Type** to be **Route**. The **Route-based connection** page is displayed, see [Figure 3-3](#).

Figure 3-3 Route Page

▼ The Creation & Configuration of Ethernet Connection

▼ rer [Detail](#) ✕

Connection Name	<input type="text" value="rer"/>
Type	<input type="text" value="Route"/>

VLAN Switch	<input checked="" type="radio"/> On <input type="radio"/> Off
VLAN ID	<input type="text" value="300"/>

[Table 3-1](#) lists the New Item parameters.

Table 3-1 Parameter Descriptions for the Route Mode

Parameter	Description
Connection Name	To create a WAN connection, select Create WAN Connection . To query or modify an existing WAN connection, select the corresponding WAN connection.
Type	The connection type includes route and bridge connection. In this case, route is selected.
Service List	Options: INTERNET, TR069, INTERNET_TR069_, VoIP, INTERNET_VoIP, VoIP_TR069, INTERNET_VoIP_TR069, and OTHER. This parameter must be consistent with service configuration. For example, if INTERNET is selected, it indicates that the WAN connection supports the Internet access service only. If TR069 is selected, it indicates that the WAN connection supports remote management. If VoIP is selected, it indicates that the WAN connection supports the voice service.
MTU	Maximum Transfer Unit (MTU) of the WAN connection. Range: 128–1492, default: 1492.
Link Type	There are two link types: <ul style="list-style-type: none"> ● PPP ● IP
PPP TransType	The default value is PPPoE.
PPP	
Username	Username of the PPPoE account. The username must be the same as that set on the peer server for authentication.
Password	Password of the PPPoE account. The Password must be the same as that set on the peer server for authentication.
IP Version	IP version that the device supports. Normally, it is set to IPv4/IPv6 . <ul style="list-style-type: none"> ● IPv4: The device supports IPv4 addresses only. ● IPv6: The device supports IPv6 addresses only. ● IPv4/IPv6: The device supports both IPv4 and IPv6 addresses.
IPv6	
IPv6 Info Get Mode	Specifies how to acquire IPv6 information for the WAN connection. It is valid only if the WAN connection supports IPv6. <ul style="list-style-type: none"> ● Manual Mode: You need to set the global address, gateway, and DNS acquisition modes. ● Auto Mode: The global address, gateway, and DNS acquisition modes are automatically configured. ● IPv6CP Extension Mode: The IPv6CP extension mode is used.

Parameter	Description
GUA From	Specifies how to acquire the global IPv6 address. It is valid only if the IPv6 Info Get Mode parameter is set to Manual Mode . Options: <ul style="list-style-type: none"> ● SLAAC: The device generates a global address in accordance with the RA packets from the upper-layer server. ● Static: You need to set a static IPv6 address. ● DHCPv6: The device acquires a global address through DHCPv6.
IPv6	Specifies the static IPv6 address and prefix length for the WAN connection. It is valid only if the GUA From parameter is set to Static .
DNSv6 From	Specifies how to acquire the IPv6 DNS address. It is valid only if the IPv6 Info Get Mode parameter is set to Manual Mode . Options: <ul style="list-style-type: none"> ● SLAAC: The device generates a DNS address in accordance with the RA packets from the upper-layer server. ● Static: You need to set static DNS addresses. A maximum of three DNS server addresses can be configured. If DNS Server 1 fails to process the domain name resolution request, the request is sent to DNS Server 2. If DNS Server 2 fails, the request is sent to DNS Server 3. ● DHCPv6: The device acquires a DNS address through DHCPv6. If no option is selected, it indicates that no DNS is configured.
DNS1/DNS2/D-NS3	IP address of the DNS server for static connections. You can set up to three IP addresses for the server. These IP addresses are provided by the ISP.
Prefix Delegation From	Valid only if the IPv6 Info Get Mode parameter is set to Auto Mode or Manual Mode . If the prefix delegation function is enabled, the system requests a prefix from the upper-layer server for allocating global addresses to devices on the LAN side.
GUA From Prefix	Valid only if the prefix delegation feature is enabled. If it is selected, the system generates global addresses in accordance with the retrieved prefix.
VLAN Switch	Valid only if the VLAN switch feature is enabled.
VLAN ID	If the VLAN function is enabled, VLAN ID is needed to be configured. Range: 1–4094. To ensure normal service operation, the VLAN ID must be the same as that set in upper-layer OLT configuration.

Bridge-based connection

5. Set the parameter **Type** to be **Bridge connection**. The **Bridge-based connection** page is displayed, see Figure 3-4.

Figure 3-4 Bridge Page

▼ The Creation & Configuration of Ethernet Connection

Table 3-2 lists the New Item parameters.

Table 3-2 Parameter Descriptions for the Bridge Mode

Parameter	Description
Connection Name	To create a WAN connection, select Create WAN Connection . To query or modify an existing WAN connection, select the corresponding WAN connection.
Type	The connection type includes Route and Bridge Connection. In this case, Bridge is selected.
Service List	INTERNET is selected. It indicates that the WAN connection supports the Internet access service only.
VLAN Switch	Valid only if the VLAN switch feature is enabled.
VLAN ID	If the VLAN function is enabled, VLAN ID is needed to be configured. Range: 1–4094. To ensure normal service operation, the VLAN ID must be the same as that set in upper-layer OLT configuration.

6. Click **Apply**.

Note:

- Modify a WAN connection.
Select an existing WAN connection from the **Connection Name** list and modify the parameters. After the parameters are set as required, click **Apply**.
- Delete a WAN connection.
Select an existing WAN connection from the **Connection Name** list and click .
- WAN connection modification and deletion may cause service failure. Perform the modification and deletion operations with care.

– End of Steps –

3.2.2 Configure the DSL

This procedure describes how to configure the DSL on the network side, so that user services can be connected to the external network.

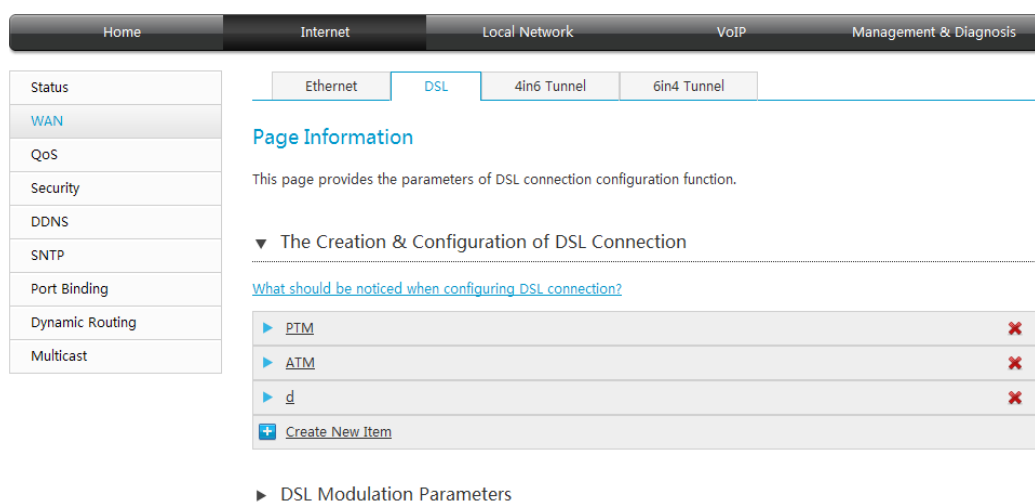

The ZXHN H267N supports Route-based and Bridge-based WAN connections.

- Route-based connection
- Bridge-based connection

Steps

1. On the main page of the ZXHN H267N, select **Internet > WAN > DSL** to go to the **DSL** page, as shown in [Figure 3-5](#).

Figure 3-5 DSL Configuring page

Creation and Configuration of DSL Connection

2. Click **The Creation & Configuration of DSL Connection**.
3. Click [+ Create New Item](#) to go to the page of creating new **DSL** connection.

Route-based connection

4. Set the parameter **Type** to be **Route**. The **Route-based connection** page is displayed, see [Figure 3-7](#).

Figure 3-6 Route Page

Table 3-3 lists the New Item parameters.

Table 3-3 Parameter Descriptions for the DSL

Parameter	Description
Connection Name	Name of the connection.
xDSL Transfer Mode	There are two xDSL transfer modes: <ul style="list-style-type: none"> ● ATM ● PTM In the case of IPv4_PPpoe, select PTM.
VPI/VCI	If xDSL Transfer ModeEnter is selected to be ATM, the VPI/VCI values provided by the ISP needs to be configured. VPI Range: 0 - 255. VCI Range: 0 - 65535.
Service Type	If xDSL Transfer ModeEnter is selected to be ATM, Service Type needs to be configured. ATM QoS used to limit the transmission of uplink traffic. The options are: CBR , RT-VBR , nRT-VBR , and UBR .

Parameter	Description
Service List	Options: INTERNET, TR069, INTERNET_TR069_, VoIP, INTERNET_VoIP, VoIP_TR069, INTERNET_VoIP_TR069, and OTHER. This parameter must be consistent with service configuration. For example, if INTERNET is selected, it indicates that the WAN connection supports the Internet access service only. If TR069 is selected, it indicates that the WAN connection supports remote management. If VoIP is selected, it indicates that the WAN connection supports the voice service.
PCR	If Service Type is selected to be CBR,RT-VBR or nRT-VBR , PCR needs to be configured.
SCR	Sustainable Cell Rate. If Service Type is selected to be RT-VBR or nRT-VBR , SCR needs to be configured.
MBS	Maximum Burst Size. If Service Type is selected to be RT-VBR or nRT-VBR , MBS needs to be configured.
Type	The connection type includes Route and Bridge Connection. In this case, Route is selected.
Encapsulation Type	The encapsulation type includes LLC and VCMUX.
MTU	Define the maximum transfer unit. In this case, default value is 1492.
Link Type	There are two link types: <ul style="list-style-type: none"> ● PPP ● IP
PPP Transfer Type	In this case, default value is PPPoE. If xDSL Transfer ModeEnter is selected to be ATM, PPP Transfer Type includes PPPoE and PPPoA .
PPP	
Username/Password	PPPoE/PPPoA user name and password. They are provided by the ISP .
IP Version	The IP version includes: <ul style="list-style-type: none"> ● IPv4 ● IPv6 ● IPv4/v6 In this case, IPv4 is selected.
IPv4	

Parameter	Description
IP Type	Select the IP type when Link Type is IP . If IP Type is configured to be static , the parameters (IP Address/Subnet Mask/Gateway/DNS1–DNS3) need to be configured.
IP Address	IP Address of ZXHN H267N.
Subnet Mask	Subnet mask of ZXHN H267N.
Gateway	It is usually the IP address of the ZXHN H267N by default.
DNS1–DNS3	IP address of the DNS server for static connections. You can set up to three IP addresses for the server. These IP addresses are provided by the ISP.
IPv6	
IPv6 Info Get Mode	The options are: <ul style="list-style-type: none"> ● Manual Mode ● Auto Mode
GUA From	Mode of obtaining global address, including SLAAC , Static and DHCPv6 .
GateWay From	Mode for obtaining gateway. The options are: SLAAC and Static.
DNSv6 From	Mode for obtaining DNS . The options are: <ul style="list-style-type: none"> ● SLAAC ● Static ● DHCPv6
Prefix Delegation From	Valid only if the IPv6 Info Get Mode parameter is set to Auto Mode or Manual Mode. If the prefix delegation function is enabled, the system requests a prefix from the upper-layer server for allocating global addresses to devices on the LAN side.
GUA From Prefix	Valid only if the prefix delegation feature is enabled. If it is selected, the system generates global addresses in accordance with the retrieved prefix.
VLAN Switch	Enable or disable the VLAN function.
VLAN ID	If the VLAN function is enabled, VLAN ID is needed to be configured. Range: 1–4094. To ensure normal service operation, the VLAN ID must be the same as that set in upper-layer OLT configuration.

Bridge-based connection

5. Set the parameter **Type** to be **Bridge connection**. The **Bridge-based connection** page is displayed, see [Figure 3-7](#).

Figure 3-7 Bridge Page

▼ The Creation & Configuration of DSL Connection

[What should be noticed when configuring DSL connection?](#)

The screenshot shows a configuration window titled 'New Item' with a 'Detail' link. The configuration parameters are as follows:

- Connection Name: [Empty text box]
- xDSL Transfer Mode: PTM (dropdown menu)
- Type: Bridge Connection (dropdown menu)
- Service List: INTERNET (dropdown menu)
- VLAN Switch: On (radio button selected), Off (radio button unselected)
- VLAN ID: [Empty text box]

Buttons: 'Apply' and 'Cancel' are located at the bottom right. '+ Create New Item' is at the bottom left.

Table 3-4 lists the New Item parameters.

Table 3-4 Parameter Descriptions for the Bridge-based connection

Parameter	Description
Connection Name	Name the connection.
xDSL Transfer Mode	There are two xDSL transfer modes: <ul style="list-style-type: none"> ● ATM ● PTM In the case of IPv4_PPPOE, select PTM.
ATM Parameters	
VPI/VCI	If xDSL Transfer ModeEnter is selected to be ATM, the VPI/VCI values provided by the ISP needs to be configured. VPI Range: 0 - 255. VCI Range: 0 - 65535.
Service Type	If xDSL Transfer ModeEnter is selected to be ATM, Service Type needs to be configured. ATM QoS used to limit the transmission of uplink traffic. The options are: CBR , RT-VBR , nRT-VBR , and UBR .
PCR	If Service Type is selected to be CBR,RT-VBR or nRT-VBR , PCR needs to be configured.

Parameter	Description
SCR	Sustainable Cell Rate. If Service Type is selected to be RT-VBR or nRT-VBR , SCR needs to be configured.
MBS	Maximum Burst Size. If Service Type is selected to be RT-VBR or nRT-VBR , MBS needs to be configured.
Type	The connection type includes Route and Bridge Connection. In this case, Bridige is selected.
Service List	Default:INTERNET.
VLAN Switch	Enable or disable theVLAN function.
VLAN ID	If theVLAN function is enabled, VLAN ID is needed to be configured. Range: 1–4094. To ensure normal service operation, the VLAN ID must be the same as that set in upper-layer OLT configuration.

- Click **Apply**.

DSL Modulation Parameters

- Click **DSL Modulation Parameters** to go to the page of **DSL Modulation Parameters**, as shown in [Figure 3-8](#).

- Configure [DSL Modulation Parameters](#).
Select the [DSL](#) modulation types and click **Apply** button to apply the changes.

**Note:**

- Click **All On** to select all [DSL](#) modulation types.
- Click **All Off** to cancel all [DSL](#) modulation types.
- When you select the Bitswap check box, the system can adjust the modulation bit of an interfered channel to the bit of other channels.

– End of Steps –

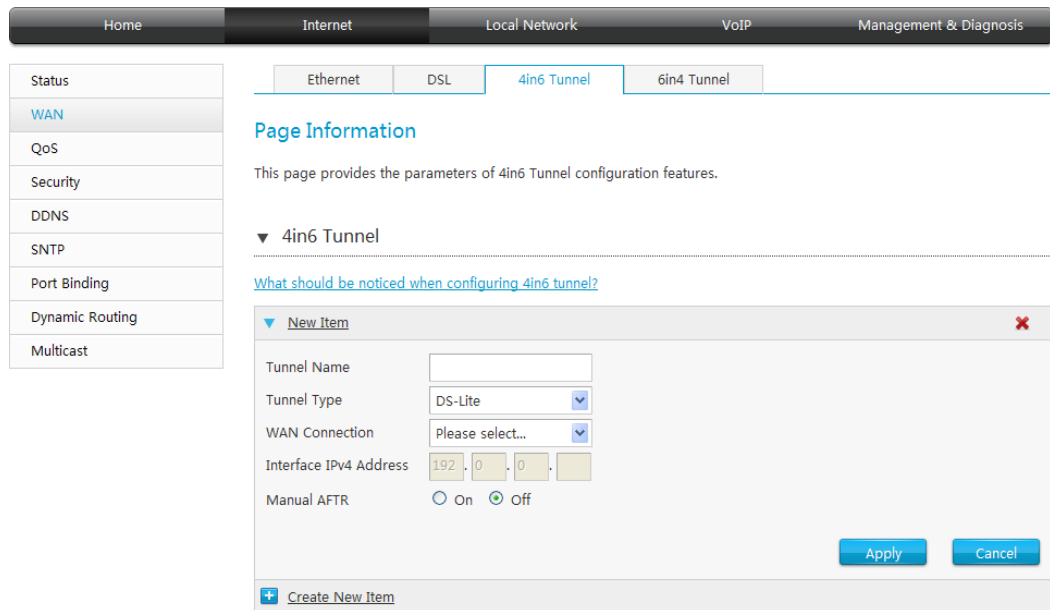

3.2.3 Configure the 4in6 Tunnel Connection

This page provides the parameters of 4in6 Tunnel configuration features.

Steps

- On the main page of the ZXHN H267N, select **Internet > WAN > 4in6 Tunnel** to go to the **4in6 Tunnel** page, as shown in [Figure 3-9](#).

Figure 3-9 4in6 Tunnel Connection page

2. Click [Create New Item](#) to create new 4in6 Tunnel.

Table 3-5 lists the New 4in6 Tunnel parameters.

Table 3-5 Parameter Descriptions for the 4in6 Tunnel

Parameter	Description
Tunnel Name	Name of the new 4in6 Tunnel.
Tunnel Type	4in6 tunnel type.
WAN Connection	Select the WAN connection.
Interface IPv4 Address	Set this parameter if Tunnel Type is set to DS-Lite . Interface address on the DS-Lite tunnel. The range defined by RFC is from 192.0.0.2 to 192.0.0.6 .
Manual AFTR	Select On/Off Manual AFTR function.
AFTR	Setting this parameter when Manual AFTR in On .

3. Click **Apply**.
– End of Steps –

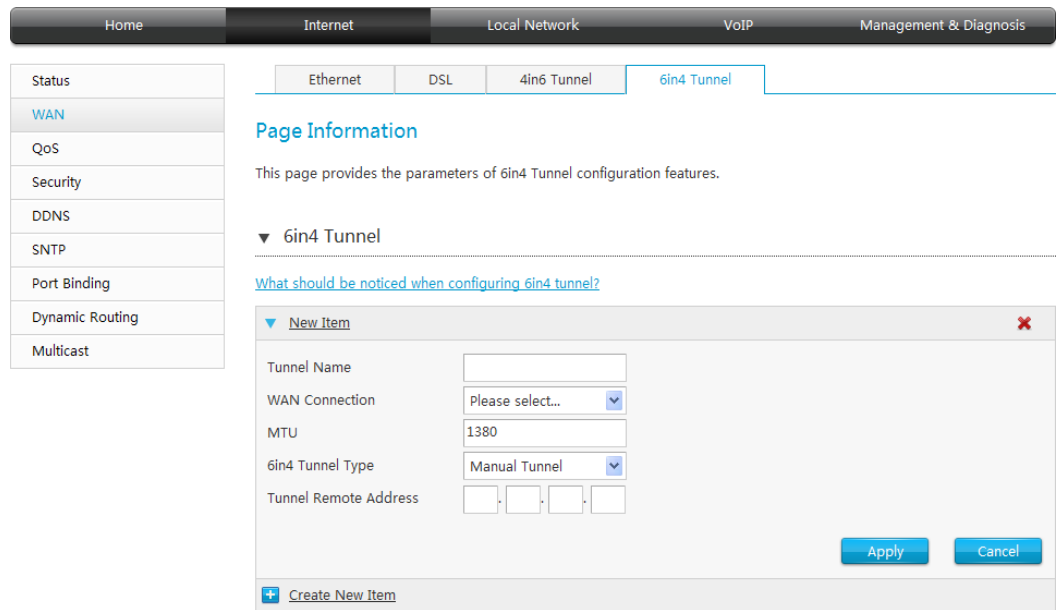

3.2.4 Configure the 6in4 Tunnel Connection

This page provides the parameters of 6in4 Tunnel configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > WAN > 6in4 Tunnel** to go to the **6in4 Tunnel** page, as shown in [Figure 3-10](#).

Figure 3-10 6in4 Tunnel Connection page

2. Click  [Create New Item](#) to create new 6in4 Tunnel.

Table 3-6 lists the New 6in4 Tunnel parameters.

Table 3-6 Parameter Descriptions for the 6in4 Tunnel

Parameter	Description
Tunnel Name	Name of the new 6in4 Tunnel.
WAN Connection	Select the WAN connection.
MTU	Define the maximum transfer unit.
6in4 Tunnel Type	There are two 6in4 Tunnel types: <ul style="list-style-type: none"> ● Manual Tunnel ● 6rd
6in4 Tunnel Configuration	There are two 6in4 Tunnel configuration types: <ul style="list-style-type: none"> ● Static ● Auto
6rd Prefix	Setting this parameter when 6in4 Tunnel Configuration is Static .
IPv4 Mask Length	Setting this parameter when 6in4 Tunnel Configuration is Static .
6rd Border Relay Address	Setting this parameter when 6in4 Tunnel Configuration is Static .
Tunnel Remote Address	Setting this parameter when 6in4 Tunnel Type is Manual Tunnel .

- Click **Apply**.

– End of Steps –

3.3 Configure the QoS

3.3.1 Configure the QoS Global Parameters

The section describes how to configure [QoS](#) global parameters.

Steps

- On the main page of the ZXHN H267N, select **Internet > QoS > QoS Global Configuration** to go to the **QoS Global Configuration** page.

The page is shown in [Figure 3-11](#).

Figure 3-11 QoS Global Configuration page

The screenshot shows the 'QoS Global Configuration' page. On the left is a sidebar menu with options: Status, WAN, QoS (selected), Security, DDNS, SNTP, Port Binding, Dynamic Routing, and Multicast. The main content area has a breadcrumb trail: Internet > QoS Global Configuration > Classification > Congestion Management > Traffic Policing. Below the breadcrumb is 'Page Information' stating: 'This page provides the relevant parameters of global switch and each sub-function switch.' Underneath is the 'QoS Global Configuration' section with the following settings:

Enable QoS	<input checked="" type="radio"/> On	<input type="radio"/> Off
Enable Traffic Policing	<input checked="" type="radio"/> On	<input type="radio"/> Off
Enable Queue Management	<input checked="" type="radio"/> On	<input type="radio"/> Off
Enable DSCP Re-marking	<input type="radio"/> On	<input checked="" type="radio"/> Off
Enable 802.1p Re-marking	<input type="radio"/> On	<input checked="" type="radio"/> Off

At the bottom of the configuration area are links for 'All On' and 'All Off', and 'Apply' and 'Cancel' buttons.

- Specify the parameters, and then click **Apply**.

Note:

- Click **All On** to select all [QoS](#) Global configuration.
- Click **All Off** to cancel all [QoS](#) Global configuration.

– End of Steps –

3.3.2 Configure the QoS Classification

This page provides the parameters of [QoS](#) Classification configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > QoS > Classification** to go to the **Classification** page.
2. Click **+ Create New Item** to create new **QoS** Classification, the page as shown in **Figure 3-12**.

Figure 3-12 New QoS Classification Page

Table 3-7 lists the QoS Classification Configuration parameters.

Table 3-7 Parameter Descriptions for the QoS Classification

Parameter	Description
On/Off	Enable/disable the function of Classification.

Parameter	Description
Ingress	Specify the data traffic direction. The Ingress option and Egress option cannot be the same. <ul style="list-style-type: none"> ● If the Ingress is LAN, the Egress should be a WAN or 3G connection. The data traffic direction is upstream. ● If the Ingress is a WAN or 3G connection, the Egress should be the LAN. The data traffic direction is downstream.
Egress	Specify the data traffic direction. The Ingress option and Egress option cannot be the same. <ul style="list-style-type: none"> ● If the Egress is LAN, the Ingress should be a WAN connection. The data traffic direction is downstream. ● If the Egress is a WAN connection, the Ingress should be the LAN. The data traffic direction is upstream.
Source MAC Address	Source host MAC address.
802.1p	Specify the 802.1p value to modify the service priority.
L2Protocol	The L2Protocol includes: <ul style="list-style-type: none"> ● IPv4 ● IPv6 ● ARP ● PPPoE
IP Version	The IP version includes: <ul style="list-style-type: none"> ● IPv4 ● IPv6
Source IPv6 Address	Source host IPv6 address.
Destination IPv6 Address	Destination host IPv6 address.
Source IP Address	Source host IP address.
Destination IP Address	Destination host IP address.
Traffic Class Check	Range: 1~1024.
TOS	Range: 0~255.
IP Precedence	Range: 0~7.
L3Protocol	The L3Protocol includes: <ul style="list-style-type: none"> ● TCP ● UDP ● ICMP
DSCP	DSCP value.
802.1p Re-marking	802.1p identifier value.
DSCP Re-marking	DSCP identifier.
Traffic Police Rule Index	Select traffic police rule index.

Parameter	Description
Traffic Class	Range: 1~1024.
Flow Lable	Range: 0~1048575.
Destination Port	Destination port number of the matching packets.

- Click **Apply** button to apply the changes.

– End of Steps –

3.3.3 Configure the QoS Congestion Management

This page provides the parameters of **QoS** Congestion Management configuration features.

Steps

- On the main page of the ZXHN H267N, select **Internet > QoS > Congestion Management** to go to the **Congestion Management** page, as shown in [Figure 3-13](#).

Figure 3-13 Congestion Management Page

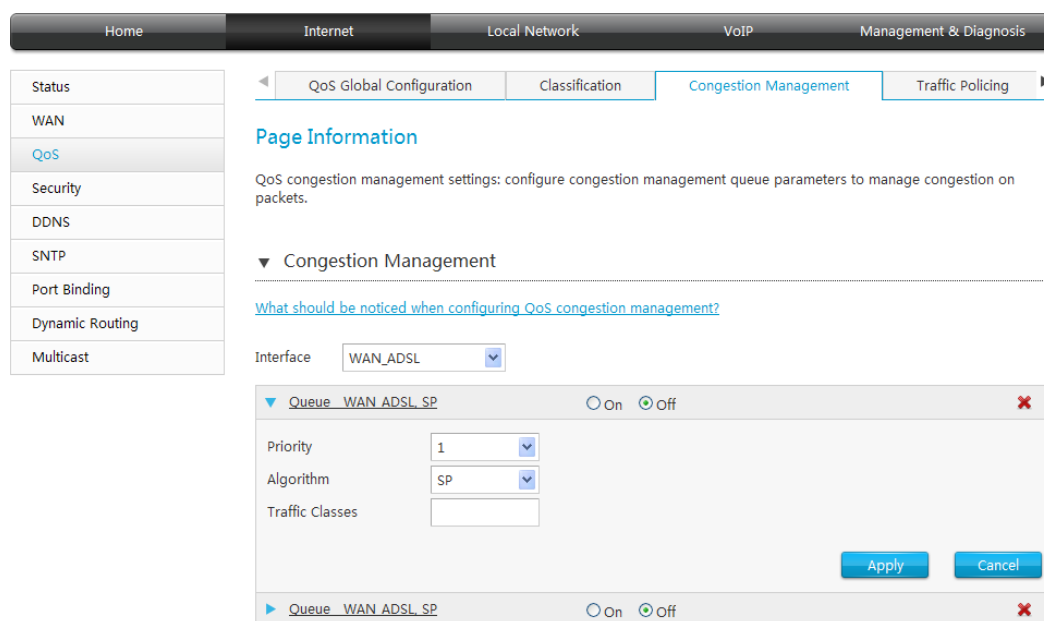

Table 3-8 lists the **QoS** congestion management parameters.

Table 3-8 Parameter Descriptions for the QoS Congestion Management

Parameter	Description
Interface	The Interface including WAN_ADSL, LAN1, LAN2, LAN3 and LAN4.
Queue Switch	On: enable the function of queue. Off: disable the function of queue.

Parameter	Description
Priority	Queue priority. Range: 1 ~ 8.
Algorithm	Queue algorithm. <ul style="list-style-type: none"> ● SP ● DWRR
Weight	The weight for the DWRR algorithm.
Traffic Classes	Categorization mechanism.

2. Click **Apply** button to apply the changes.

– End of Steps –

3.3.4 Configure the QoS Traffic Policing

This page provides the parameters of QoS Traffic Policing configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > QoS > Traffic Policing** to go to the **Traffic Policing** page, as shown in [Figure 3-14](#).

Figure 3-14 Traffic Policing page

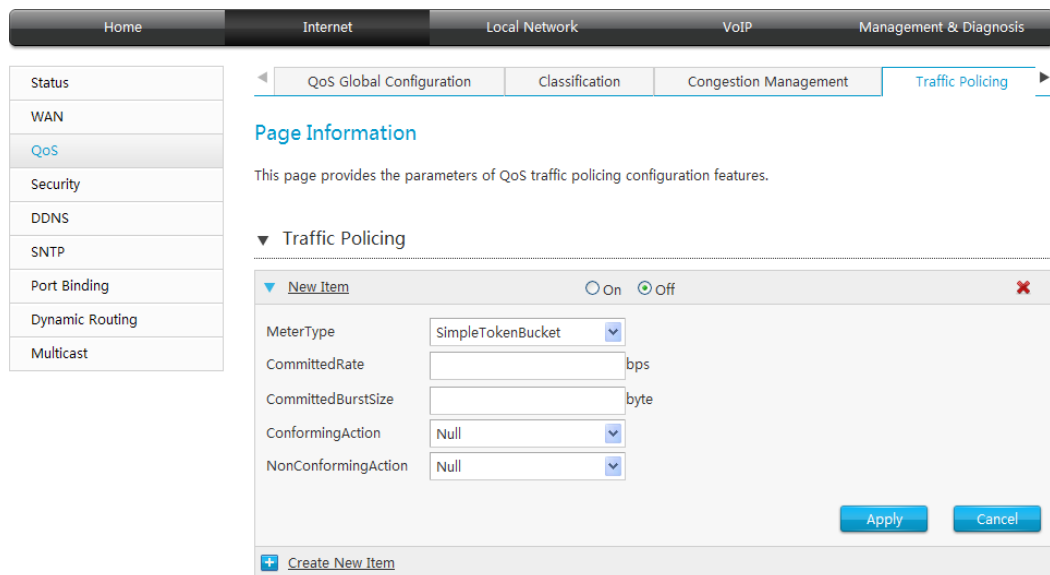

Table 3-9 lists the QoS Traffic Policing parameters.

Table 3-9 Parameter Descriptions for the QoS Traffic Policing

Parameter	Description
MeterType	The meter type includes: <ul style="list-style-type: none"> ● Simple Token Bucket ● Simple Rate Three Color ● Two Rate Three Color
CommittedRate	Guaranteed rate.
CommittedBurstSize	Buffer size for QoS.
ConformingAction	The conforming action includes: <ul style="list-style-type: none"> ● Null ● Drop ● DSCPMark ● 802.1pMark ● DSCPMark&802.1pMark
NonConformingAction	The non conforming action includes: <ul style="list-style-type: none"> ● Null ● Drop ● DSCPMark ● 802.1pMark ● DSCPMark&802.1pMark
ExcessBurstSize	Excess burst size.
PartialConformingAction	The partial conforming action includes: <ul style="list-style-type: none"> ● Null ● Drop ● DSCPMark ● 802.1pMark ● DSCPMark&802.1pMark
DSCP	QoS classification criterion. A DSCP is specified for the TOS byte in the IP header of each packet to indicate the priority. Range: 0–63.
802.1p	If VLAN is enabled, you can modify service priority through this parameter. Range: 0–7. A higher number indicates a higher priority.
PeakRate	Peak rate.
PeakBurstSize	Peak burst size.

2. Click **Apply** button to apply the changes.

– End of Steps –

3.4 Configure the Security

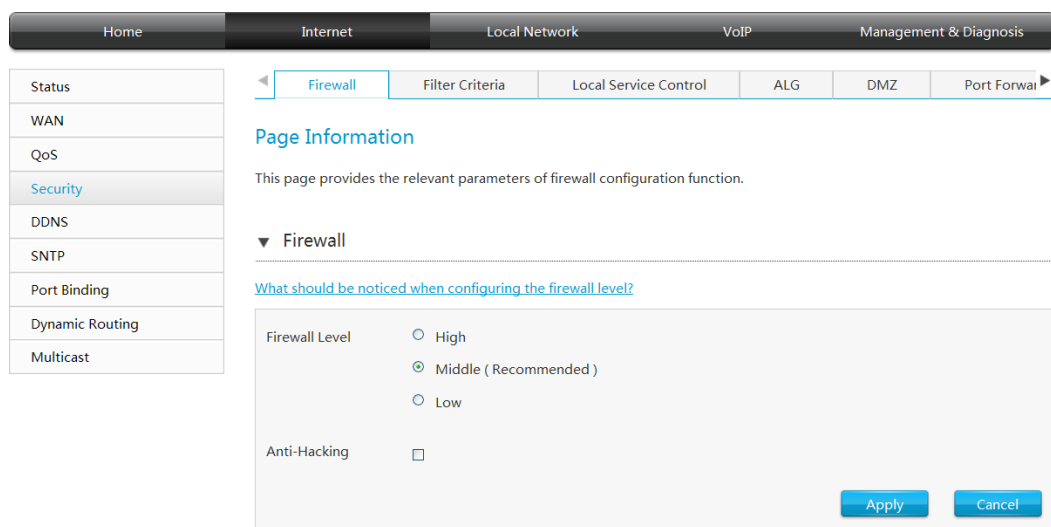

3.4.1 Configure the Firewall Level

The section describes how to configure firewall level.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > Firewall** to go to the **Firewall** page, the page as shown in [Figure 3-15](#).

Figure 3-15 Firewall Page

2. Set the parameters. For a description of the parameters, refer to .

Table 3-10 Firewall Parameter Descriptions

Parameter	Description
Anti-Hacking	To enable anti-hacking protection and prevent device shutdown due to Internet attacks, select this check box. This feature can prevent ping flood, ping to death, and SYN flood attacks.
Firewall Level	<ul style="list-style-type: none"> ● High: allows legal access from the WAN but forbids Internet devices from sending ping packets to the WAN interface of the ZXHN H267N. ● Middle: allows legal access from the WAN and blocks dangerous data from the Internet. ● Low: allows legal access from the WAN and allows Internet devices to send ping packets to the WAN interface of the ZXHN H267N.

3. Click **Apply** button to apply the changes.

– End of Steps –

3.4.2 Configure the Filter Criteria

The section describes how to configure filter criteria.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > Filter Criteria** to go to the **Filter Criteria** page.

Filter Switch & Mode Configuration

2. Click **Filter Switch & Mode Configuration**.

Figure 3-16 Filter Switch & Mode Configuration Page

3. Configure Filter Switch & Mode configuration parameters.

Table 3-11 lists the Filter Switch & Mode configuration parameters.

Table 3-11 Parameter Descriptions for the Switch & Mode Filter

Parameter	Description
MAC Filter	Enable the MAC filter function. There are two modes: <ul style="list-style-type: none"> ● Black List ● White List
URL Filter	Enable the URL filter function. There are two modes: <ul style="list-style-type: none"> ● Black List ● White List

Table 3-13 Parameter Descriptions for the IP Filter

Parameter	Description
Name	Name of the IP filter item. The name must be specified.
Mode	Specify to discard or permit the data packages.
Protocol	Select the protocol that needs to filter packets. By default, it is TCP .
Source Port Range/Destination Port Range	Source/Destination source Port.
Source IP Range/Destination IP Range	Source/Destination destination IP address.
Ingress	Specify the data traffic direction. The Ingress option and Egress option cannot be the same. <ul style="list-style-type: none"> ● If the Ingress is LAN, the Egress should be a WAN connection. The data traffic direction is upstream. ● If the Ingress is a WAN connection, the Egress should be the LAN. The data traffic direction is downstream.

Parameter	Description
Egress	Specify the data traffic direction. The Ingress option and Egress option cannot be the same. <ul style="list-style-type: none"> ● If the Ingress is LAN, the Egress should be a WAN or 3G connection. The data traffic direction is upstream. ● If the Ingress is a WAN or 3G connection, the Egress should be the LAN. The data traffic direction is downstream.

12. Click **Apply** button to apply the changes.

– End of Steps –

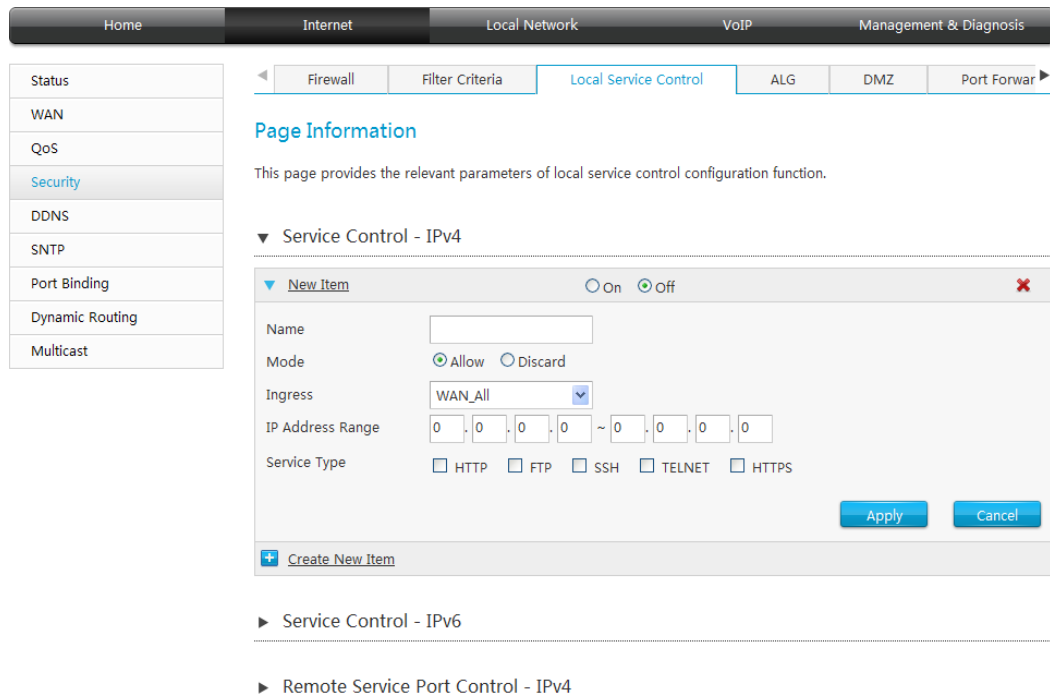

3.4.3 Configure the Local Service Control

The section describes how to configure local service control.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > Local Service Control** to go to the **Local Service Control** page, as shown in [Figure 3-20](#).

Figure 3-20 Local Service Control Page

Local Service Control-IPv4

2. Configuring Local Service Control-IPv4 parameters.

[Table 3-14](#) lists the Local Service Control-IPv4 parameters.

Table 3-14 Parameter Descriptions for the Service Control-IPv4

Parameter	Description
Name	Name of the Service Control item. The name must be specified.
Mode	The mode includes the following: <ul style="list-style-type: none"> ● Allow ● Discard
Ingress	Specify the data stream inbound direction, and this parameter must be specified. <ul style="list-style-type: none"> ● If the Ingress is LAN, the data flow is upstream. ● If the Ingress is a WAN or 3G connection, the data flow is downstream.
IP Address Range	The IP address segment that needs to be filtered. When the IP segment is null, it refers to all the IP addresses.
Service Type	Specify the service that is permitted or denied to access.

Service Control-IPv6

3. Click **Service Control-IPv6** to open **Service Control-IPv6** page, as shown in [Figure 3-21](#).

Parameter	Description
HTTP	The remote service port control of HTTP .
FTP	The remote service port control of FTP .
SSH	The remote service port control of SSH .
TELNET	The remote service port control of TELNET .
HTTPS	The remote service port control of HTTPS .

6. Click **Apply** button to apply the changes.

– End of Steps –

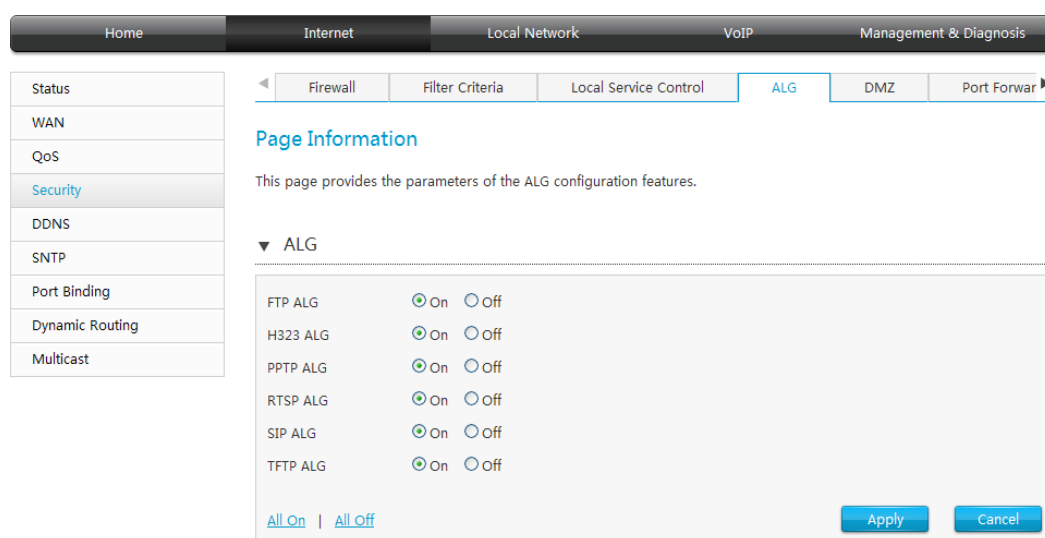

3.4.4 Configure the ALG

The section describes how to configure **ALG**. **ALG** provides the relevant parameters of security configuration function.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > ALG** to go to the **ALG** page, the page as shown in [Figure 3-23](#).

Figure 3-23 ALG Configuration Page

2. Select the **ALG** services.
3. Click **Apply** button to apply the changes.

Note:

- Click **All On** to select all **ALG** services.
- Click **All Off** to cancel all **ALG** services.

– End of Steps –

3.4.5 Configure the DMZ

The section describes how to configure **DMZ**. **DMZ** provides the parameters of **DMZ** configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > DMZ** to go to the **DMZ** page, the page as shown in [Figure 3-24](#).

Figure 3-24 DMZ Configuration Page

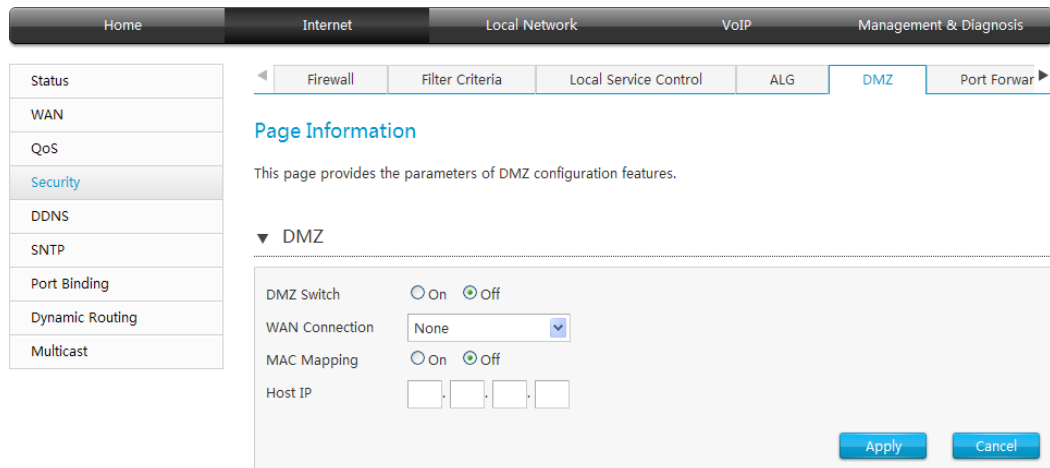

Table 3-17 lists the DMZ parameters.

Table 3-17 Parameter Descriptions for the DMZ

Parameter	Description
DMZ Switch	Enable the DMZ host function.
WAN Connection	WAN connection type.
MAC Mapping	Enable the MAC mapping function.
Host IP	The IP address of the computer or wireless devices at the LAN side.
MAC Address	The MAC address of the computer or wireless devices at the LAN side.

2. Click **Apply** button to apply the changes.

– End of Steps –

3.4.6 Configure the Port Forwarding

This procedure introduces how to configure Port Forwarding so that a computer from the external network can access the LAN-side server through the WAN connection. Port Forwarding provides the parameters of Port Forwarding configuration features.

If you have local servers for different services and you want to make them publicly accessible, you need to specify the port forwarding policy. With NAT applied, it translates the internal IP addresses of these servers to a single IP address that is unique on the Internet.

To the Internet users, all virtual servers on your LAN have the same IP Address. This IP Address is allocated by your ISP. This address should be static, rather than dynamic, to make it easier for Internet users to connect to your servers. However, you can use dynamic DNS feature to allow users to connect to your virtual servers by using a URL, instead of an IP address.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > Port Forwarding** to go to the **Port Forwarding** page, the page as shown in [Figure 3-25](#).

Figure 3-25 Port Forwarding Configuration Page

2. Configure the Port Forwarding parameters.

[Table 3-18](#) lists the Port Forwarding settings parameters.

Table 3-18 Parameter Descriptions for the Port Forwarding

Parameter	Description
Name	Virtual host name, which cannot be null.
Protocol	Protocol name, including TCP , UDP , as well as TCP AND UDP . The default protocol is TCP .
WAN Connection	WAN connection that is used to access the virtual host.
WAN Host IP Range	IP address segment of the WAN-side hosts.
MAC Mapping	Enable the MAC mapping function and map the MAC addresses of the LAN-side hosts to a single MAC address.
LAN Host IP	IP address of the LAN-side host.
LAN Host MAC Address	The MAC address of LAN-side host.
WAN Port Range	Port segment of the WAN-side hosts.
LAN Host Port Range	Port number range of the LAN-side host. Range: 1~65535.

3. Click **Apply** button to apply the changes.
 – End of Steps –

3.4.7 Configure the Port Trigger

The section describes how to configure Port Trigger. **Port Trigger** provides the parameters of Port Trigger configuration features.

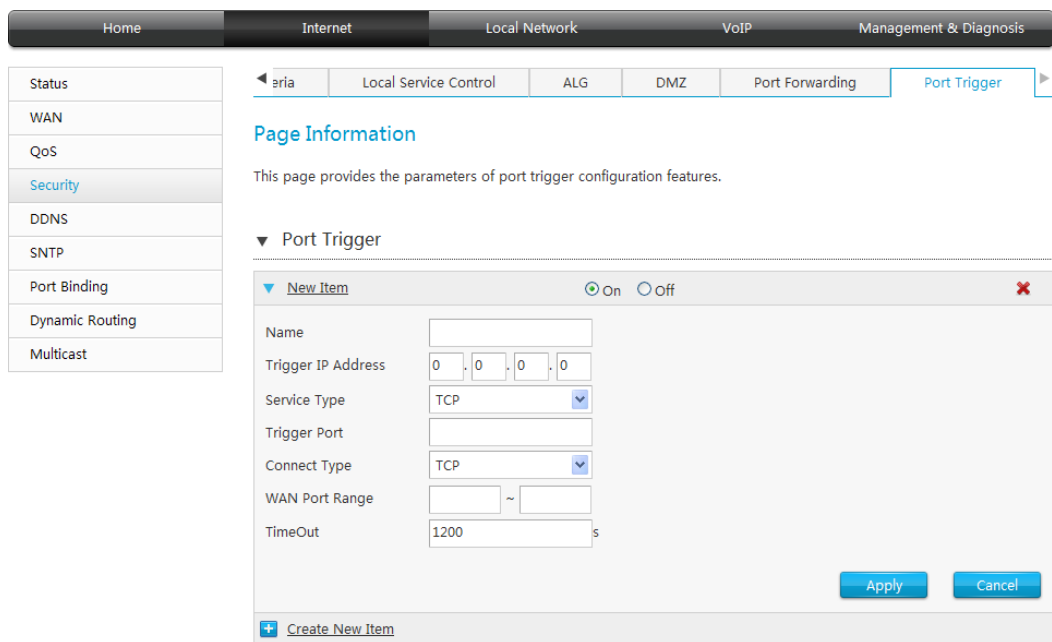

When one port is configured to be the triggering port, if one application uses that triggering port to setup a connection to the outside, the ZXHN H267N device will forward the outside connection to the internal forwarding port.

The port triggering is used to protect the ports. The system will not open these ports unless these ports are triggered.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Security > Port Trigger** to go to the **Port Trigger** page, the page as shown in [Figure 3-26](#).

Figure 3-26 Port Trigger Configuration Page

2. Configure the Port Trigger parameters.

[Table 3-19](#) lists the Port Trigger parameters.

Table 3-19 Parameter Descriptions for the Port Trigger

Parameter	Description
Name	The name of Port Trigger.
Trigger IP Address	IP address of the computer in the LAN side.

Parameter	Description
Service Type	The service type of the application, including TCP , UDP , and TCP AND UDP . The default service type is TCP .
Trigger Port	The port that the application uses.
Connect Type	The connection type that is used to connect the outside, including TCP , UDP , and TCP AND UDP . The default service type is TCP .
WAN Port Range	Specify the port range of the device protocol that the triggering port maps, that is, the layer-4 port number of the packets. Once the device accesses the triggering port, the service between the start port and end port will be enabled. The WAN Start Port and WAN End Port must be specified and meet the following conditions. <ul style="list-style-type: none"> • The end port number is larger than the start port number. • The difference between the end port number and the start port number is less than nine.
Timeout	The time when no traffic occurs.

3. Click **Apply** button to apply the changes.

– End of Steps –

3.5 Configure the DDNS

The section describes how to configure [DDNS](#). **DDNS** provides the parameters of [DDNS](#) configuration function.

Steps

1. On the main page of the ZXHN H267N, select **Internet > DDNS** to go to the **DDNS** page, the page as shown in [Figure 3-27](#).

Figure 3-27 DDNS Configuration Page

- Configure the **DDNS** parameters.

Table 3-20 lists the **DDNS** parameters.

Table 3-20 Parameter Descriptions for the DDNS

Parameter	Description
DDNS switch	Enable or disable the DDNS function.
Provider	Supported provider. Options: dyndns and DtDNS. If the DtDNS is selected, the WAN Connection should be configured.
Provider URL	The URL of provider. If the dyndns HTTP is used, the URL is <code>http://www.dyndns.com</code> . If the DtDNS HTTP is used, the URL is <code>http://www.dyndns.com</code> .
Username	DDNS server user name.
Password	DDNS server password.
Host name	Host name corresponding to the user.
WAN Connection	WAN connection on which the DDNS feature is enabled.

- Click **Apply** button to apply the changes.

– End of Steps –

3.6 Configure the SNTP

The section describes how to configure **SNTP**. **SNTP** provides the parameters of **SNTP** configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > SNTP** to go to the **SNTP** page, the page as shown in [Figure 3-28](#).

Figure 3-28 SNTP Configuration Page

The screenshot shows the SNTP configuration page. The navigation tabs at the top are Home, Internet, Local Network, VoIP, and Management & Diagnosis. The sidebar menu on the left includes Status, WAN, QoS, Security, DDNS, SNTP (highlighted), Port Binding, Dynamic Routing, and Multicast. The main content area has a 'Page Information' section stating 'This page provides the parameters of SNTP configuration features.' Below this is a 'SNTP' configuration section with the following fields:

- Current Date and Time: 1970-01-01T01:20:42
- Time Zone: (GMT+08:00) Beijing, Chongqing, Hong Kong, Urumqi
- Primary NTP Server Address: 192.168.1.5
- Secondary NTP Server Address: 10.41.132.9
- Poll Interval: 3600 s
- DSCP: (empty field)

'Apply' and 'Cancel' buttons are located at the bottom right of the configuration section.

2. Configure the **SNTP** parameters.

[Table 3-21](#) lists the **SNTP** parameters.

Table 3-21 Parameter Descriptions for the SNTP

Parameter	Description
Time Zone	Time zone.
Primary NTP Server Address	IP address or domain name of the active NTP server.
Secondary NTP Server Address	IP address or domain name of the standby NTP server.
Poll Interval	Interval of time synchronization. Unit: second.
DSCP	Range: 0–63.
Enable Daylight Saving Time	Enable the Daylight Saving Time.

3. Click **Apply** button to apply the changes.

– End of Steps –

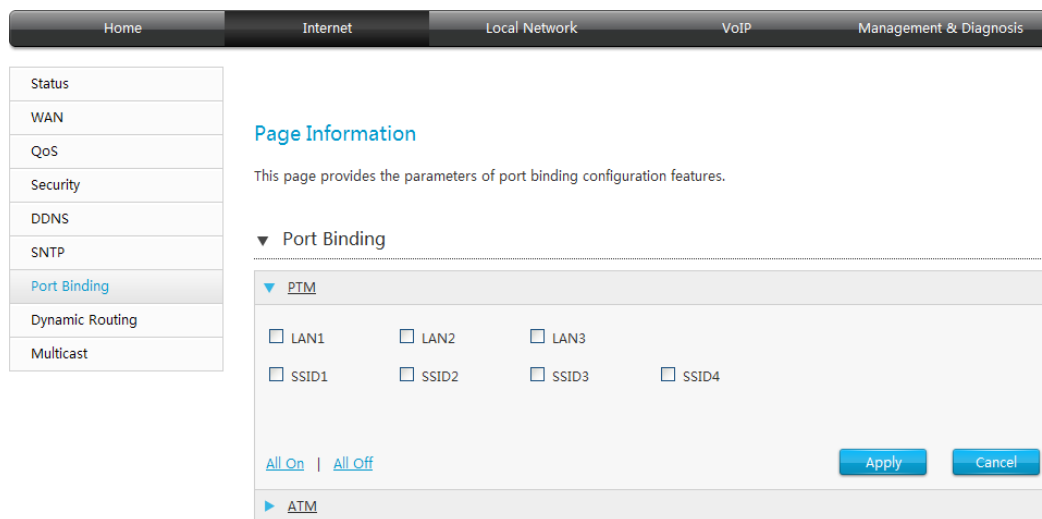

3.7 Configure the Port Binding

The section describes how to configure Port Binding. **Port Binding** provides the parameters of Port Binding configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Port Binding** to go to the **Port Binding** page, the page as shown in [Figure 3-29](#).

Figure 3-29 Port Binding Configuration Page

2. Select the **WAN connection**, and select the LAN port or SSID that you want to bind.

Note:

- Click **All On** to select all Port Binding types.
- Click **All Off** to cancel all Port Binding types.

3. Click **Apply** button to apply the changes.

– End of Steps –

3.8 Configure the Dynamic Routing

The section describes how to configure Dynamic Routing. **Dynamic Routing** provides the parameters of [RIP](#) configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Dynamic Routing** to go to the **Dynamic Routing** page.

The page is shown in [Figure 3-30](#).

Figure 3-30 Dynamic Routing Configuration Page

The screenshot shows a web interface for configuring dynamic routing. The top navigation bar includes 'Home', 'Internet', 'Local Network', 'VoIP', and 'Management & Diagnosis'. The left sidebar lists various configuration options, with 'Dynamic Routing' highlighted. The main content area is titled 'Page Information' and contains a section for 'RIP' configuration. The 'RIP' section has a dropdown for 'RIP Version' set to 'RIP v2' and a dropdown for 'Authentication Type' set to 'None'. There are 'Apply' and 'Cancel' buttons at the bottom right of the configuration area.

**Note:**

The **RIP** configuration options vary with the **RIP Version** value.

RIP

- Configure the **RIP** parameters.

Table 3-22 lists the **RIP** parameters.

Table 3-22 Parameter Descriptions for the RIP

Parameter	Description
Enable RIP	To enable RIP .
RIP Version	Range: RIP v1 , RIP v2 , RIP v1 Compatible .
Authentication Type	The type includes None, Simple text, and MD5. By default, it is None .
Authentication Key	Range: 1–16 characters

- Click **Apply** button to apply the changes.

– End of Steps –

3.9 Configure the Multicast

3.9.1 Configure the IGMP

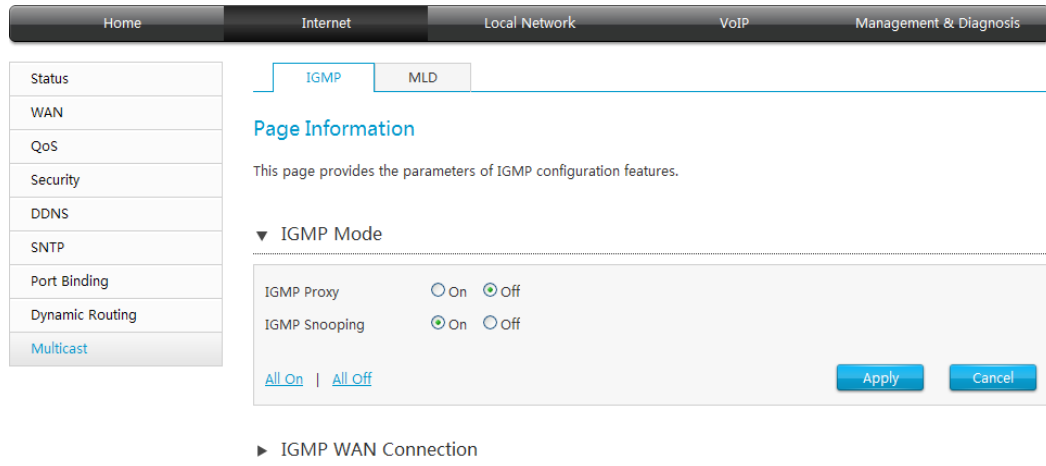

The section describes how to configure **IGMP**. **IGMP** provides the parameters of **IGMP** configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Internet > Multicast > IGMP** to go to the **IGMP** page.

The page is shown in [Figure 3-31](#).

Figure 3-31 IGMP Configuration Page

2. Enable the **IGMP** functions.

Note:

- Click **All On** to select all **IGMP** functions.
- Click **All Off** to cancel all **IGMP** functions.

3. Click **Apply** button to apply the changes.

IGMP WAN Connection

4. Click **IGMP WAN Connection** to open **IGMP WAN Connection** page, as shown in [Figure 3-32](#).

Figure 3-32 IGMP WAN Connection Page

5. Configuring **WAN Connection**.

- Click **Apply** button to apply the changes.

– End of Steps –

3.9.2 Configure the MLD

The section describes how to configure **MLD**. **MLD** provides the parameters of **MLD** configuration features.

Steps

- On the main page of the ZXHN H267N, select **Internet > Multicast > MLD** to go to the **MLD** page.

The page is shown in [Figure 3-33](#).

Figure 3-33 MLD Configuration Page

MLD Mode

- Enable the **MLD** Mode.

Note:

- Click **All On** to select all **MLD** functions.
- Click **All Off** to cancel all **MLD** functions.

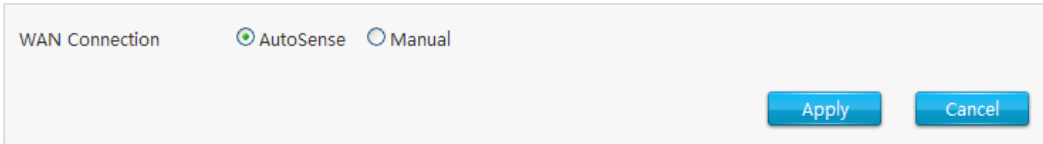

- Click **Apply** button to apply the changes.

WAN Connection

- Click **MLD WAN Connection** to open **MLD WAN Connection** page, as shown in [Figure 3-34](#).

Figure 3-34 MLD WAN Connection Page

Chapter 4

Configure the Local Network

Table of Contents

Check the Local Network Status.....	4-1
Configure the WLAN	4-2
Configure the LAN.....	4-8
Configure the Route	4-15
Configure the FTP.....	4-20
Configure the UPnP	4-21
Configure the DMS.....	4-22
Configure the DNS	4-23

4.1 Check the Local Network Status

The section describes the status of Local Network. The relevant information of Local Network status is shown as below.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > Status** to go to the **Local Network Status** page.

The page is shown in [Figure 4-1](#).

Figure 4-1 Local Network Status Page

The screenshot shows the 'Local Network Status' page. At the top, there are navigation tabs: Home, Internet, Local Network (selected), VoIP, and Management & Diagnosis. On the left, there is a sidebar menu with options: Status (selected), WLAN, LAN, Route, FTP, UPnP, DMS, and DNS. The main content area is titled 'Page Information' and states 'This page shows the status of LAN.' Below this, there is a section for 'LAN Status' with a dropdown arrow. It contains two tables for LAN1 and LAN2.

LAN1			
MAC Address	00:19:c6:50:9d:0c	Status	Up
IPv4 Address	192.168.1.1	Bytes Received/Bytes Sent	615621 / 2775469
IPv6 Address	fe80::1		

LAN2			
MAC Address	00:19:c6:50:9d:0c	Status	NoLink
IPv4 Address	192.168.1.1	Bytes Received/Bytes Sent	0 / 0
IPv6 Address	fe80::1		

- The relevant information of Local Network status includes **LAN Status**, **WLAN Status**, **WLAN Client Status**, **LAN Client Status** and **USB Storage Status**.

– End of Steps –

4.2 Configure the WLAN

4.2.1 Configure the Basic Parameters of the WLAN

The section describes how to configure **WLAN** Basic Settings. **WLAN Basic Settings** provides the parameters of **WLAN** Basic Settings configuration features.

Steps

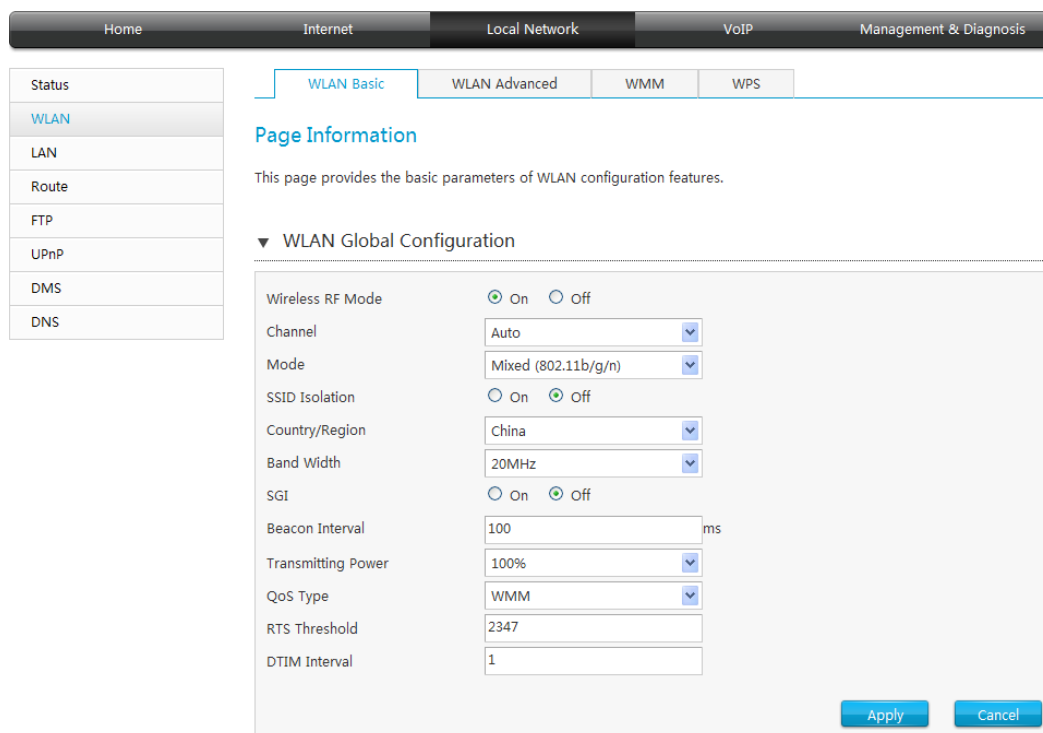

- On the main page of the ZXHN H267N, select **Local Network > WLAN > WLAN Basic** to go to the **WLAN Basic** page.

WLAN Global Configuration

- Click **WLAN Global**.

The page is shown in [Figure 4-2](#).

Figure 4-2 WLAN Global Configuration Page

- Configure the **WLAN** Global Configuration parameters.

[Table 4-1](#) lists the **WLAN** global Configuration parameters.

Table 4-1 Parameter Descriptions for the WLAN Global Configuration

Parameter	Description
Wireless RF Mode	Select On to enable the wireless RF function.
Channel	The default is Auto .
Mode	Select the wireless RF transmission mode.
SSID Isolation	Select On , so that the wireless clients with the different SSIDs can not access each other.
Country/Region	Select the country or region.
Beacon Interval	Time interval for the wireless device to broadcast the SSID information. Keep the default value.
Transmitting Power	Select the transmitting power as required.
QoS Type	There are two QoS types: <ul style="list-style-type: none"> ● Disable ● WMM
RTS Threshold	Specify the request to send threshold for a packet. When a packet exceeds this value, the device sends the RTS value to the destination point for negotiation. The default is 2347.
DTIM Interval	Range: 1 – 5. Default: 1.
Fragment Threshold	Default: 2346.

4. Click **Apply** button to apply the changes.

WLAN SSID Settings

5. Click **WLAN Global Parameter**.

The page is shown in [Figure 4-3](#).

Enable SSID Isolation

Maximum Clients

▶ WLAN SSID-2 On Off

▶ WLAN SSID-3 On Off

▶ WLAN SSID-4 On Off

- Configure the **WLAN SSID** setting parameters.

Table 4-2 lists the **WLAN SSID** setting parameters.

Table 4-2 Parameter Descriptions for the WLAN SSID setting

Parameter	Description
SSID Name	The name of SSID.
SSID Hide	Hide the SSID information to prevent illegal users.
Encryption Type	Select Encryption Type.
WPA Passphrase	Range: 8 ~ 63 characters
Enable SSID Isolation	Enable SSID isolation. The wireless clients with the same SSID can not access each other.
Maximum Clients	Range: 1 - 32

Note:

The **WLAN Basic Settings** configuration options vary with the **Encryption type** value.

- Click **Apply** button to apply the changes.

– End of Steps –

4.2.2 Configure the Advanced Parameters of the WLAN

The section describes how to configure **WLAN** Advanced. **WLAN Advanced** provides the parameters of **WLAN** Advanced configuration features.

Steps

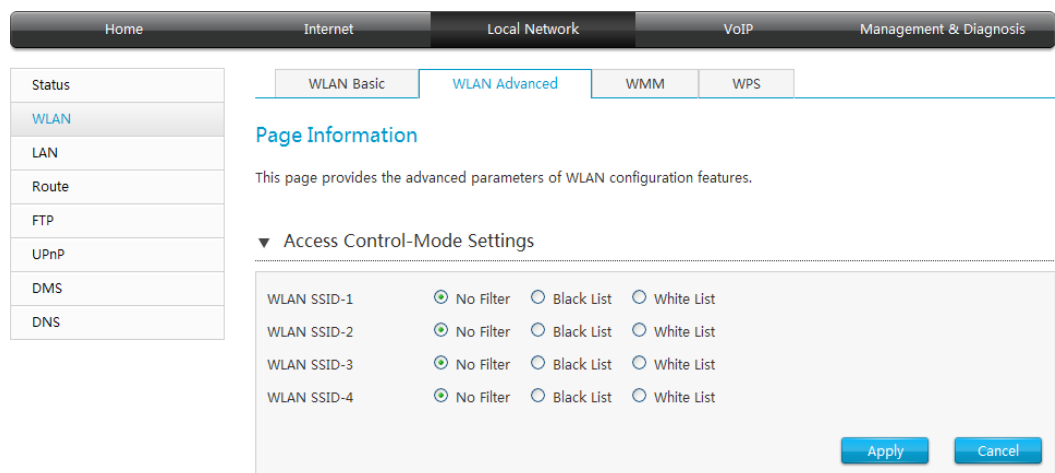

1. On the main page of the ZXHN H267N, select **Local Network > WLAN > WLAN Advanced** to go to the **WLAN Advanced** page.

Access Control-Mode Settings

2. Click **Access Control-Mode Settings**.

The page is shown in [Figure 4-4](#).

Figure 4-4 Access Control-Mode Settings Page

3. Configure the **WLAN** Global Configuration parameters.

[Table 4-3](#) lists the Access Control-Rule setting parameters.

Table 4-3 Access Control-Mode parameters

Parameter	Description
No Filter	No filter is to be applied (the default).
Back List	Deny LAN users to access specific address.
White List	Allow LAN users to access specific address.

4. Click **Apply** button to apply the changes.

Access Control-Rule Settings

5. Click **Access Control-Rule Settings**.

The page is shown in [Figure 4-5](#).

Figure 4-5 Access Control-Rule Settings

6. Configure the Access Control-Rule Configuration parameters.

Table 4-3 lists the Access Control-Rule parameters.

Table 4-4 Access Control-Rule parameters

Parameter	Description
Name	The name of Access Control Item.
Choose SSID	Choose the SSID to configure the ACL.
MAC Address	The MAC address of the wireless device.

7. Click **Apply** button to apply the changes.

– End of Steps –

4.2.3 Configure the WMM

The section describes how to configure **WMM**. The WMM support the BE_AC/BK_AC/VI_AC/VO_AC control types.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > WLAN > WMM** to go to the **WMM** page, as shown in Figure 4-6.

Figure 4-6 WMM Configuration Page

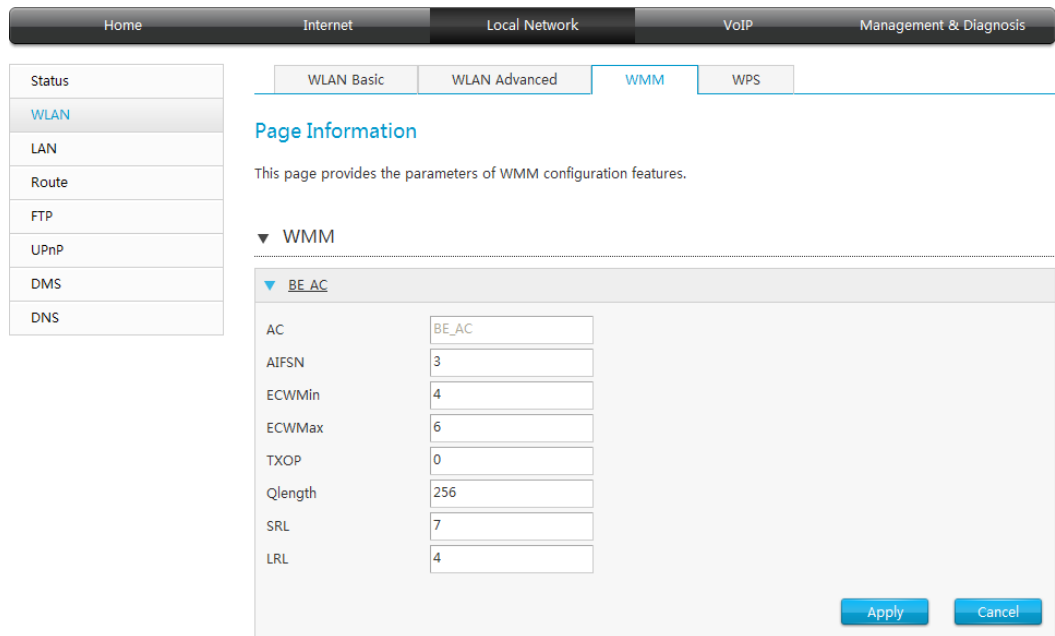

Table 4-5 lists the WMM parameters.

Table 4-5 Parameter Descriptions for the WMM

Parameter	Description
AC	Access Category.
AIFSN	Arbitration Inter Frame Space Number.
ECWMin/ECWMax	Exponent of Contention Window.
TXOP	Transmission Opportunity.
Qlength	The queue size valule.
SRL	A short retry counter.
LRL	A long retry counter.

2. Click **Apply** button to apply the changes.

– End of Steps –

4.2.4 Configure the WPS

This page provides the parameters of WPS configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > WLAN > WPS** to go to the **WPS** page, as shown in Figure 4-7.

Figure 4-7 WPS Configuration Page

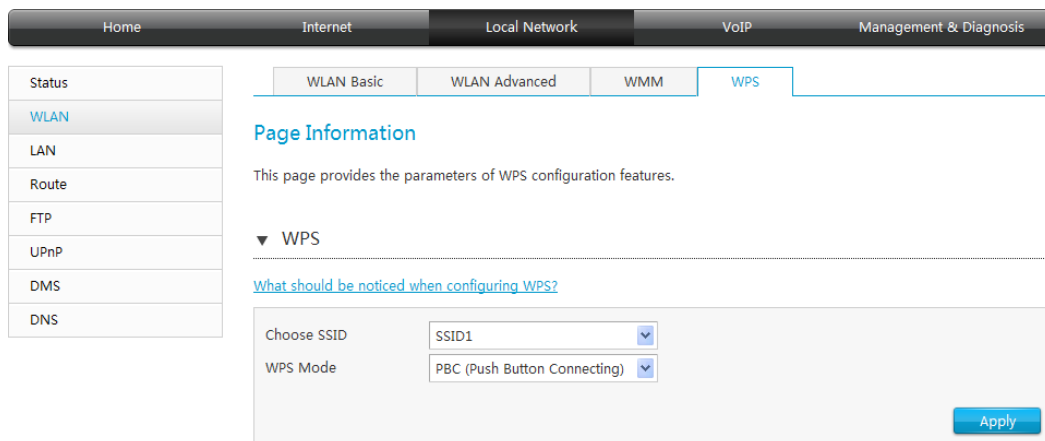

Table 4-6 lists the WPS parameters.

Table 4-6 Parameter Descriptions for the WPS

Parameter	Description
SSID	Default SSID1.
WPS Mode	WPS Mode that the device supports. Normally, it is set to PCB. <ul style="list-style-type: none"> ● PCB(Push Button Connecting) ● Disabled

2. Click **Apply** button to apply the changes.

– End of Steps –

4.3 Configure the LAN

4.3.1 Configure the LAN(IPv4)

The section describes how to configure LAN(IPv4).

The relevant information of Internet status includes **Allocated Address**, **DHCP Server**, **DHCP Binding** and **Port Control-DHCP**.

Steps

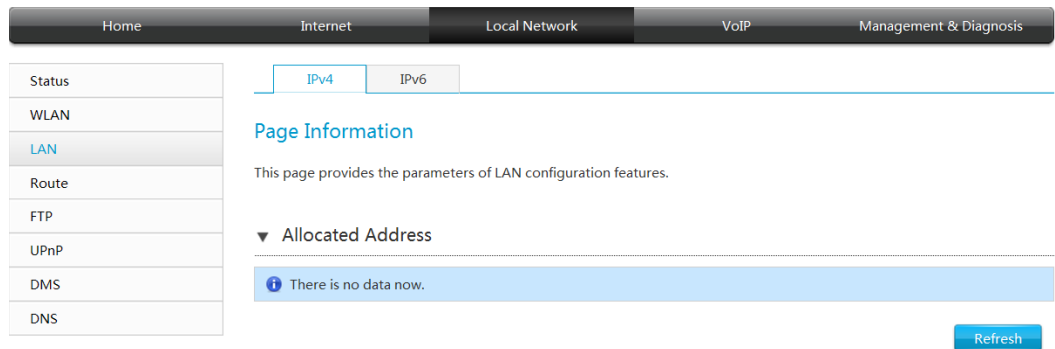

1. On the main page of the ZXHN H267N, select **Local Network > LAN > IPv4** to go to the **IPv4** page.

Allocated address

2. Click **Allocated Address**.

Allocated address page is displayed, see [Figure 4-8](#).

Figure 4-8 Allocated Address(IPv4) Page

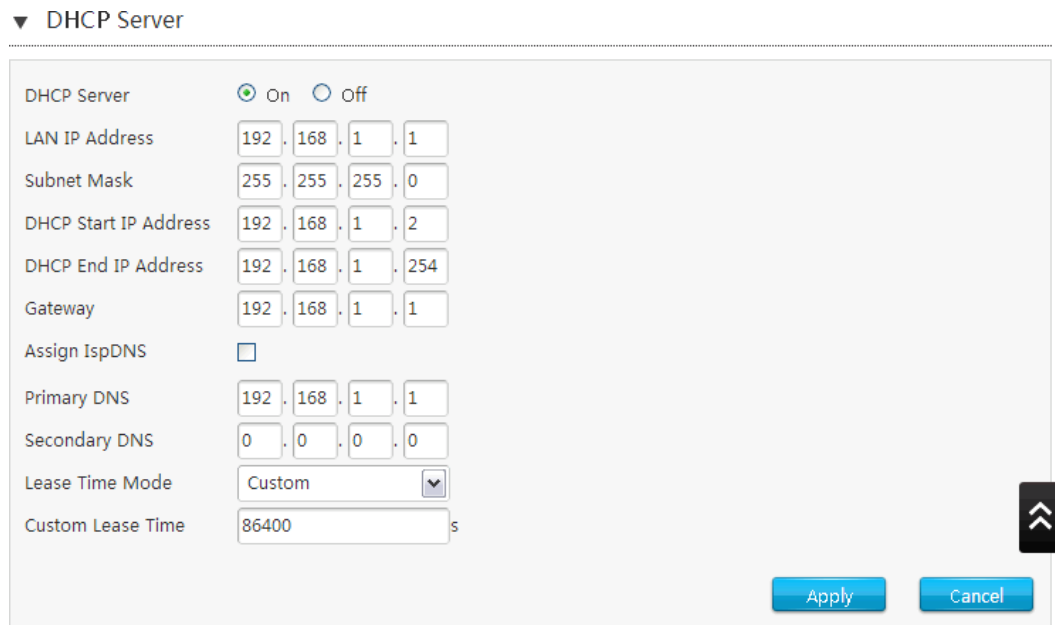

3. Click **Refresh** to refresh the informations.

DHCP server

4. Click **DHCP Server**.

DHCP server page is displayed, see [Figure 4-9](#).

Figure 4-9 DHCP Server(IPv4) Page

5. Configure the DHCP server parameters.

[Table 4-7](#) lists the **DHCP** server parameters.

Table 4-7 Parameter Descriptions for the DHCP Server

Parameter	Description
DHCP Server	Select On to let the device work as a DHCP server and assign IP addresses to the client PCs or wireless devices.
LAN IP Address	The IP address of LAN .
Subnet Mask	Subnet mask of the device.

Parameter	Description
DHCP Start IP Address	The start IP address of the DHCP address pool.
DHCP End IP Address	The end IP address of the DHCP address pool.
Gateway	It is usually the IP address of the ZXHN H267N device by default.
Assign IspDNS	Select On to let the Assign IspDNS work.
Primary DNS	IP addresses of the DNS server1, provided by the ISP.
Secondary DNS	IP addresses of the DNS server2, provided by the ISP.
Lease Time Mode	The mode of Lease Time.
Custom Lease Time	The time during which the client PCs use the IP addresses assigned by the DHCP server. After the lease time expires, the private IP address will be available for assigning to other network devices.

6. Click **Apply** button to apply the changes.

Port Control-DHCP

7. Click **Port Control-DHCP**.

The page is shown in [Figure 4-10](#).

Figure 4-10 Port Control-DHCP(IPv4) Page

8. Select the LAN interface or SSID on which you want to disable the DHCP function.

**Note:**

- Click **All On** to select all **IPv4 DHCP** Service-Port Control types.
- Click **All Off** to cancel all **IPv4 DHCP** Service-Port Control types.

DHCP binding

9. Click **DHCP Binding**.

The page is shown in [Figure 4-11](#).

Figure 4-11 DHCP Binding Page

▼ DHCP Binding

10. Configure the DHCP Binding parameters.

[Table 4-8](#) lists the **DHCP** Binding parameters.

Table 4-8 Parameter Descriptions for the DHCP Binding

Parameter	Description
Name	The name of the DHCP Binding.
MAC Address	The MAC address of the DHCP Binding.
IP Address	IP address of the DHCP Binding.

11. Click **Apply** button to apply the changes.

– End of Steps –

4.3.2 Configure the LAN(IPv6)

The section describes how to configure **LAN** Management-IPv6.

The relevant information of Internet status includes **Allocated Address**, **DHCP Server**, **Prefix Management**, **Port Control-DHCPv6&RA** and **RA Service**.

Prerequisite

Before configuring the prefix delegation, make sure that the prefix delegation is enabled for the specified IPv6 WAN connection.

Steps

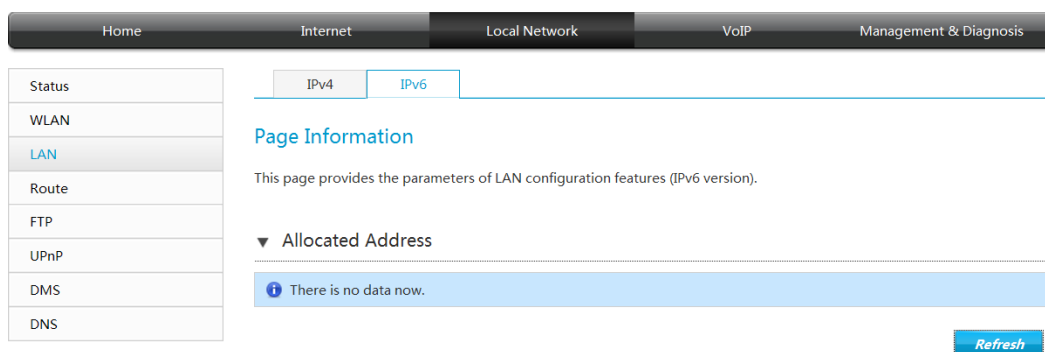

1. On the main page of the ZXHN H267N, select **Local Network > LAN > IPv6** to go to the **IPv6** page.

Allocated address

2. Click **Allocated Address**.

Allocated address page is displayed, see [Figure 4-12](#).

[All On](#) | [All Off](#)

9. Select the **LAN** interface or **SSID** on which you want to disable or enable the **DHCP** and **RA** function.

Note:

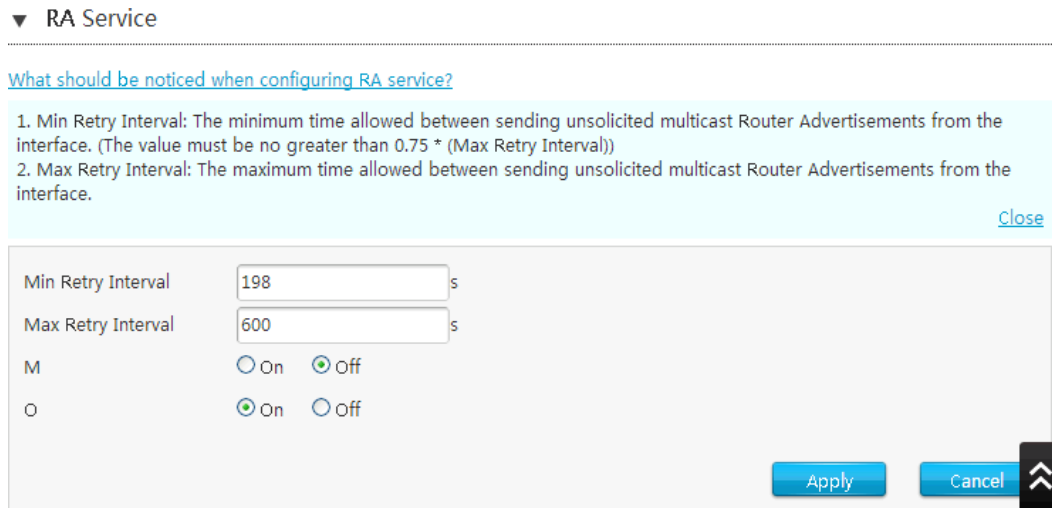

- Click **All On** to select all **IPv6 DHCP** Service-Port Control types.
- Click **All Off** to cancel all **IPv6 DHCP** Service-Port Control types.

RA service.

10. Click **RA Service**.

The page is shown in [Figure 4-16](#).

Figure 4-16 RA Service Page

11. Configure the **RA** Service parameters.

[Table 4-10](#) lists the **RA** Service parameters.

Table 4-10 Parameter Descriptions for the RA Service

Parameter	Description
Min Retry Interva	Minimum retry interva.
Max Retry Interva	Maximum retry interva.
M	Managed flag. Select this check box to enable the connected devices to obtain the IPv6 address through DHCP IPv6 .
O	Other configure flag. Select this check box to enable the connected devices to obtain DNS address through DHCP IPv6 .

12. Click **Apply** button to apply the changes.

– End of Steps –

4.4 Configure the Route

4.4.1 Configure the Route(IPv4)

The section describes how to configure route(IPv4). **Route(IPv4)** provides the parameters of route(IPv4) configuration features.

The relevant information of Internet status includes **Routing Table**, **Static Routing** and **Policy Routing**.

Prerequisite

Before configuring **Route(IPv4)**, make sure that the **IPv4 WAN** connection is created.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > Route > IPv4** to go to the **Route(IPv4)** page.

Routing table

2. Click **Routing Table**.

The page is shown in [Figure 4-17](#).

Figure 4-17 Routing Table(IPv4) Page

The screenshot displays the 'Routing Table(IPv4) Page' in a web interface. At the top, there is a navigation bar with tabs: Home, Internet, Local Network (selected), VoIP, and Management & Diagnosis. Below this, there is a sidebar menu with options: Status, WLAN, LAN, Route (selected), FTP, UPnP, DMS, and DNS. The main content area has two tabs: IPv4 (selected) and IPv6. Under the IPv4 tab, there is a 'Page Information' section stating 'This page provides the routing management features of the device.' Below that is a 'Routing Table' section with a table:

Network Address	Subnet Mask	Gateway	Interface
192.168.1.0	255.255.255.0	0.0.0.0	LAN

Below the table is a 'Refresh' button. At the bottom of the page, there are two expandable sections: 'Static Routing' and 'Policy Routing', both currently collapsed.

3. Click **Refresh** to refresh the informations.

Static routing

4. Click **Static Routing**.

The page is shown in [Figure 4-18](#).

Figure 4-18 Static Routing(IPv4) Page

▼ Static Routing

[What should be noticed when configuring static routing?](#)

User manually configures the routing information.

1. If network address and subnet mask are both 0.0.0.0, this configuration will be a default routing, which is effective for any destination address.
2. If WAN interfaces and gateway are both configured, please ensure that the gateway can be reached through the WAN interface.

Source MAC	Source MAC address.

**Note:**

The **Policy Routing** configuration options vary with the **Protocol** value.

- Click **Apply** button to apply the changes.

– End of Steps –

4.4.2 Configure the Route(IPv6)

The section describes how to configure Route-IPv6.

The relevant information of Internet status includes **Routing Table**, **Static Routing**, and **Policy Routing**.

Prerequisite

Before configuring **Route(IPv6)**, make sure that the **IPv6 WAN** connection is created.

Steps

- On the main page of the ZXHN H267N, select **Local Network > Route > IPv6** to go to the **Route(IPv6)** page.

Routing table.

- Click **Routing Table**.

The page is shown in [Figure 4-20](#).

Figure 4-20 Routing Table(IPv6) Page

The screenshot displays the 'Routing Table(IPv6) Page' in the ZXHN H267N maintenance management interface. The page is divided into several sections:

- Navigation Menu:** Home, Internet, Local Network (selected), VoIP, Management & Diagnosis.
- Left Sidebar:** Status, WLAN, LAN, Route (selected), FTP, UPnP, DMS, DNS.
- Main Content Area:**
 - Page Information:** This page provides the routing management features (IPv6 version) of the device.
 - Routing Table:** A table with the following data:

Prefix	Gateway	Interface
fe80::/64	::	LAN
 - Buttons:** A 'Refresh' button is located at the bottom right of the table.
 - Links:** 'Static Routing' and 'Policy Routing' are listed below the table.

- Click **Refresh** to refresh the informations.

– End of Steps –

4.5 Configure the FTP

The section describes how to configure **FTP**.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > FTP** to go to the **FTP** page.

The page is shown in [Figure 4-23](#).

Figure 4-23 FTP Page

The screenshot shows the 'Local Network' tab selected in the top navigation bar. On the left, a sidebar menu lists various network settings, with 'FTP' highlighted. The main content area is titled 'Page Information' and includes a description: 'This page provides the parameters of FTP configuration features.' Below this, a section titled 'FTP' contains the following configuration options:

- Enable FTP Server:** Radio buttons for 'On' and 'Off', with 'Off' selected.
- FTP Security:** Radio buttons for 'On' and 'Off', with 'On' selected.
- FTP Username:** A text input field containing 'admin'.
- FTP Password:** A password input field with masked characters (dots).

'Apply' and 'Cancel' buttons are located at the bottom right of the configuration area.

2. Set the parameters. For a description of the parameters, refer to [Table 4-15](#).

Table 4-15 Parameter Descriptions for the FTP

Parameter	Description
Enable FTP Server	Specifies whether to enable the FTP server.
FTP Security	Specifies whether to enable the FTP Security.
FTP Username/ FTP Password	Username/Password of the FTP Server

3. Click **Apply** button to apply the changes.

– End of Steps –

4.6 Configure the UPnP

This page provides the parameters of **UPnP** configuration features.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > UPnP** to go to the **UPnP** page.

The page is shown in [Figure 4-24](#).

Figure 4-24 UPnP Page

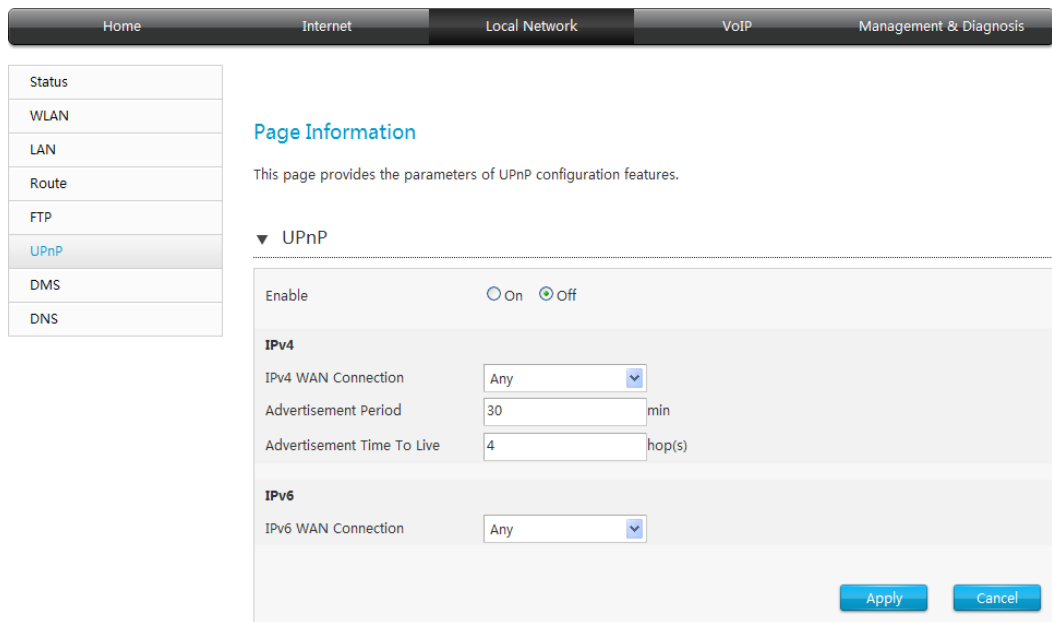

Table 4-16 lists the UPnP parameters.

Table 4-16 Parameter Descriptions for the UPnP

Parameter	Description
IPv4 WAN Connection	IPv4 WAN connection for UPnP.
Advertisement Period	Time period that the UPnP device sends an announcement packet. If the UPnP device does not send any announcement packets during this period, it indicates that the device is invalid. By default, the period is 30 minutes.
Advertisement Time To Live	The time to live for the advertisement. The advertisement will be abandoned after it has been transferred for the specified times by the routers. The default value is 4.
IPv6 WAN Connection	IPv6 WAN connection for UPnP.

2. Click **Apply** button to apply the changes.

– End of Steps –

4.7 Configure the DMS

The section describes how to configure [DMS](#).

Prerequisite

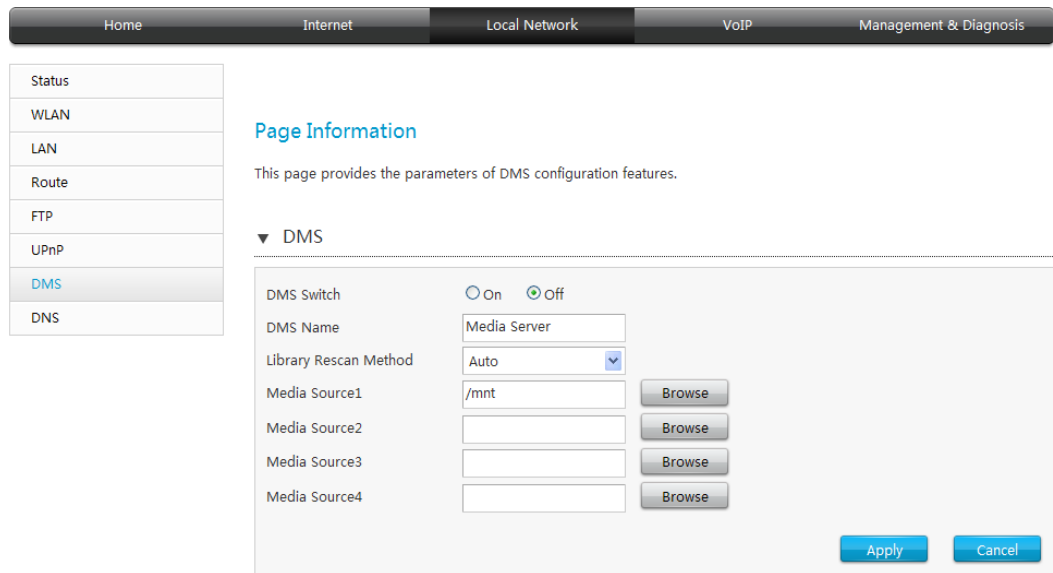

The [USB](#) device is connected to the ZXHN H267N device.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > DMS** to go to the **DMS** page.

The page is shown in [Figure 4-25](#).

Figure 4-25 DMS Configuration Page

2. Set the parameters. For a description of the parameters, refer to [Table 4-17](#).

Table 4-17 Parameter Descriptions for the DMS

Parameter	Description
DMS Switch	Specifies whether to enable the DMS.
DMS Name	To create a DMS, enter the name of the DMS.
Library Rescan Method	Library rescan method that the device supports. Normally, it is set to Auto. <ul style="list-style-type: none"> ● Disabled ● Auto ● Customized
Media Source1–Media Source4	By default, the media source is /mnt, that is the root directory of the USB device. You can change the root directory to other directory of the USB storage device.

3. Click **Apply** button to apply the changes.

– End of Steps –

4.8 Configure the DNS

The section describes how to configure [DNS](#).

The relevant information of Internet status includes **Domain name**, **Host Name** and **DNS**.

Steps

1. On the main page of the ZXHN H267N, select **Local Network > DNS** to go to the **DNS** page.

The page is shown in [Figure 4-26](#).

Figure 4-26 DNS Configuration Page

The screenshot shows the DNS Configuration Page. At the top, there is a navigation bar with tabs: Home, Internet, Local Network (selected), VoIP, and Management & Diagnosis. On the left, a sidebar menu lists various settings: Status, WLAN, LAN, Route, FTP, UPnP, DMS, and DNS (highlighted). The main content area is titled 'Page Information' and contains the text: 'This page provides the parameters of DNS configuration features.' Below this, there is a section for 'Domain Name' with a text input field and 'Apply' and 'Cancel' buttons. There are also expandable sections for 'Host Name' and 'DNS'.

Domain name

2. Type the **Domain name**.
3. Click **Apply** button to apply the changes.

Host Name

4. Click **Host name**.

The page is shown in [Figure 4-27](#).

Figure 4-27 Host Name Page

The screenshot shows the Host Name configuration page. It features a section for 'Host Name' with a 'New Item' button. Below this, there is a form with two text input fields: 'Host Name' and 'IP Address'. There are 'Apply' and 'Cancel' buttons at the bottom right. A '+ Create New Item' button is visible at the bottom left.

5. Type the host name in the **Host Name** text box and the **IP Address** in the **IP Address** text box.
6. Click **Apply** button to apply the changes.

DNS Configuration

7. Click **DNS**.

The page is shown in [Figure 4-28](#).

2. Click **Refresh** to refresh the information.

– End of Steps –

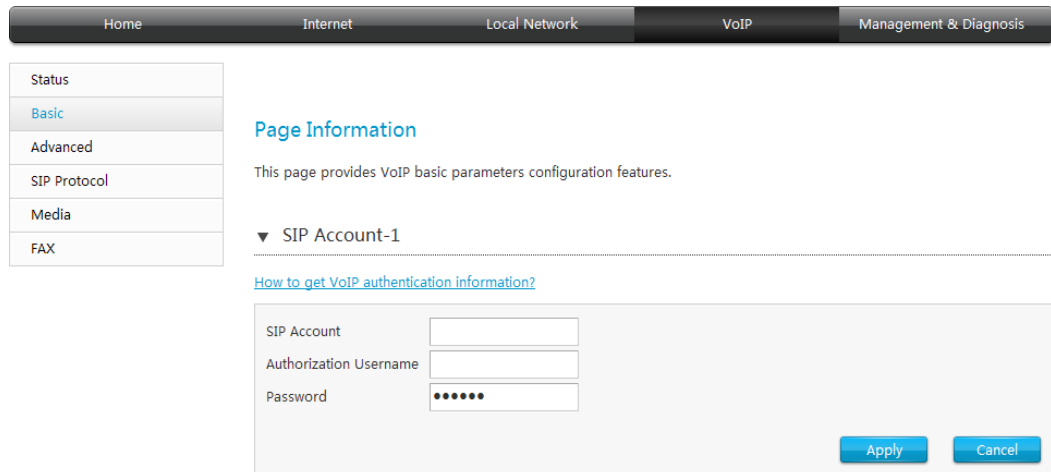

5.2 Configure the SIP Accounts

This procedure describes how to configure basic parameters of the VoIP service, including sip account, authorization username, password.

Steps

1. Select **Application > VoIP > SIP Accounts**. The **SIP Accounts** page is displayed, see [Figure 5-2](#).

Figure 5-2 SIP Accounts Page

2. Set the parameters. For a description of the parameters, refer to .

Table 5-1 Parameter Descriptions for the SIP Accounts

Parameter	Description
SIP Account	Registered name of a SIP subscriber. Normally, it is the phone number of the subscriber.
Password	Password for VoIP service authentication by the SS system, which must be the same as that configured in the SS system.
Authorization Username	Username for authentication by the SS system, which must be the same as that configured in the SS system.

3. Click **Apply**.
– End of Steps –

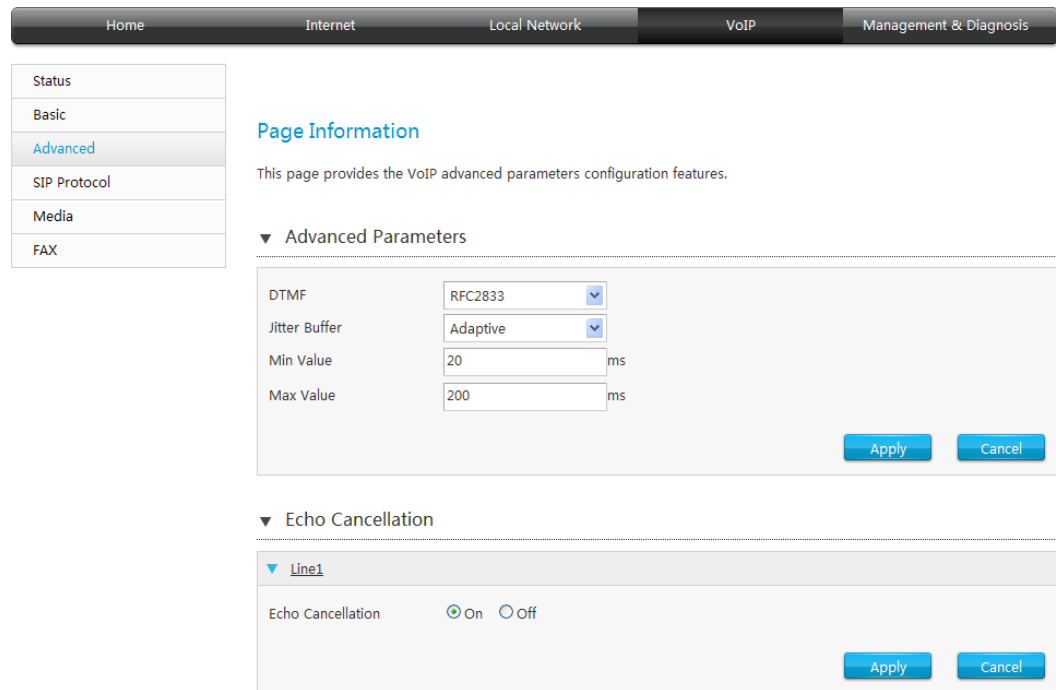

5.3 Configure the Advanced Parameters of VoIP

This procedure describes how to configure advanced parameters of the **VoIP** service, including echo cancellation, jitter buffer, and **DTMF**.

Steps

1. Select **VoIP > Advanced**. The **Advanced** page is displayed, see [Figure 5-3](#).

Figure 5-3 Advanced Parameters Page

2. Set the advanced parameters. For a description of the parameters, refer to [Table 5-2](#).

Table 5-2 Advanced Parameter Descriptions for the VoIP Service

Parameter	Description
DTMF	DTMF mode. Options: <ul style="list-style-type: none"> ● RFC2833: DTMF digits are carried by RTP streams. ● DTMF in Voice: DTMF digits are not processed. ● SIP Info:SIP protocol information.
Jitter Buffer	The variation in packet delay is called jitter. Jitter buffer refers to intentional delay of packets. Options: <ul style="list-style-type: none"> ● Fixed: A fixed buffer time must be specified. ● Adaptive: A jitter range must be specified.
Min Value	Minimum value of the jitter range, default: 20 ms.
Max Value	Maximum value of the jitter range, default: 200 ms.
Echo Cancellation	Whether to disable the echo cancellation feature.

3. Click **Apply**.

– End of Steps –

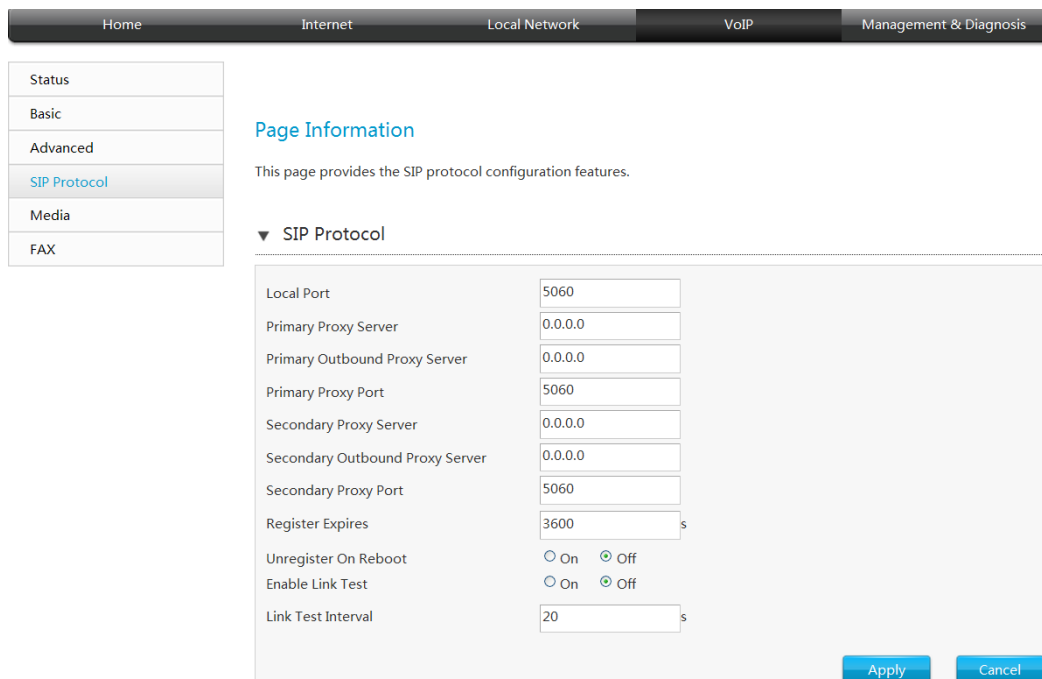

5.4 Configure the SIP Protocol

This procedure describes how to configure the SIP Protocol.

Steps

1. Select **VoIP > SIP Protocol**. The **SIP Protocol** page is displayed, see [Figure 5-4](#).

Figure 5-4 SIP Protocol Page

2. Set the parameters. For a description of the parameters, refer to [Table 5-3](#).

Table 5-3 Parameter Descriptions for the SIP Protocol

Parameter	Description
Local Port	Local port that the SIP protocol uses, default: 5060.
Primary Proxy Server	IP address of the active SIP proxy server that the ISP provides, which must be the same as that configured on the SIP server.
Primary Outbound Proxy Server	IP address of the active outbound proxy server that the ISP provides, which must be the same as that configured on the SIP server.
Primary Proxy Port	Port number that the ISP provides for communication between the active server and VoIP terminals, which must be the same as that configured on the SIP server, default: 5060.
Secondary Proxy Server	IP address of the standby SIP proxy server that the ISP provides, which must be the same as that configured on the SIP server.
Secondary Outbound Proxy Server	IP address of the standby outbound proxy server that the ISP provides, which must be the same as that configured on the SIP server.
Secondary Proxy Port	Port number that the ISP provides for communication between the standby server and VoIP terminals, which must be the same as that configured on the SIP server, default: 5060.

Parameter	Description
Register Expires	Registered lifecycle, unit: seconds, default: 3600.
Unregister On Reboot	Whether to deregister VoIP terminals after the server is restarted.
Enable Link Test	Whether to enable link tests.
Link Test Interval	Interval of link tests, default: 20 seconds.

3. Click **Apply**.

– End of Steps –

5.5 Configure the Media

This procedure describes how to configure the media codec type.

Steps

1. Select **Application > VoIP > Media**. The **Media** page is displayed, see [Figure 5-5](#).

Figure 5-5 Media Page

The screenshot shows the 'Media' configuration page for 'Phone1'. The page information states: 'This page provides the media parameters configuration features.' Under the 'Phone1' section, there is a list of codecs with their respective VAD and Codec Priority settings:

Codec	VAD	Codec Priority
<input checked="" type="checkbox"/> G722	<input type="checkbox"/> VAD	1
<input checked="" type="checkbox"/> G711U	<input type="checkbox"/> VAD	2
<input checked="" type="checkbox"/> G711A	<input type="checkbox"/> VAD	3
<input checked="" type="checkbox"/> G729	<input type="checkbox"/> VAD	4
<input checked="" type="checkbox"/> G726	<input type="checkbox"/> VAD	5
<input checked="" type="checkbox"/> G723	<input type="checkbox"/> VAD	6

Buttons for 'Apply' and 'Cancel' are located at the bottom right of the configuration area.

2. Select a codec.

3. Click **Apply**.

– End of Steps –

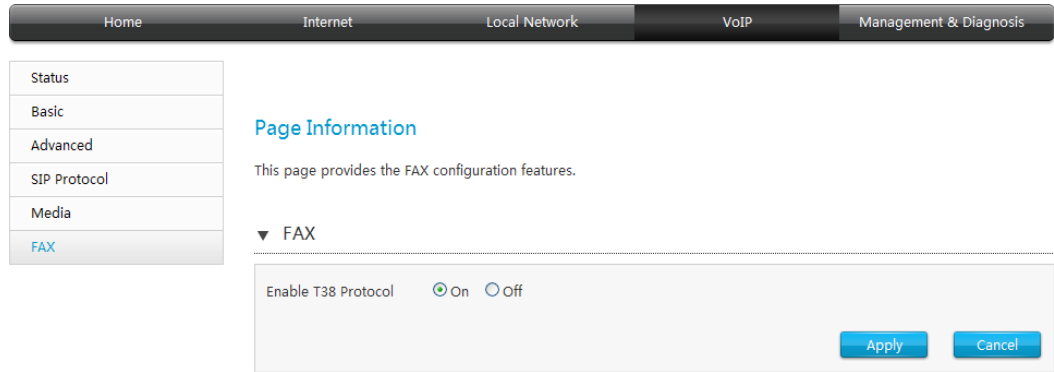

5.6 Configure the Fax

The ZXHN H267N supports the T30 and T38-based fax feature. By default, the T38 protocol is used.

Steps

1. Select **VoIP > Fax**. The **Fax** page is displayed, see [Figure 5-6](#).

Figure 5-6 Fax Page

2. Set the parameters. For a description of the parameters, refer to [Table 5-4](#).

Table 5-4 Parameter Descriptions for the Fax

Parameter	Description
Enable T38 Protocol	Whether to enable the T38 protocol. If this check box is not selected, the T30 protocol is used.

3. Click **Apply**.

– End of Steps –

Chapter 6

Configure the Management and Diagnosis

Table of Contents

Check the Device Status	6-1
Configure the Account Management	6-2
Configure the Login Timeout	6-3
Configure the System Management	6-4
Configure the Mirror	6-7
Configure the TR-069	6-8
Manage the Log	6-10
Diagnosis	6-11
Check the ARP Table	6-14
Check the MAC Table	6-15
Configure the ETH Uplink Management	6-16
Configure the IPv6 Switch	6-16

6.1 Check the Device Status

The relevant information of device status is shown as below.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Status** to go to the **Status** page.

The page is shown in [Figure 6-1](#).

Figure 6-1 Device Status Page

2. Click **Refresh** to refresh the information.

– End of Steps –

6.2 Configure the Account Management

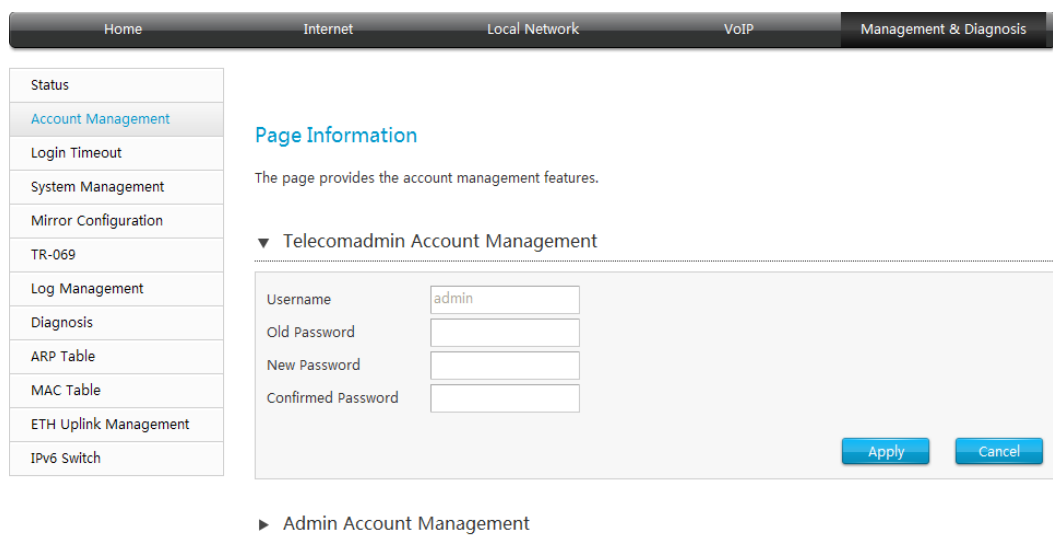

This procedure introduces how to manage the user accounts and rights.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Account Management** to go to the **Account Management** page.

The page is shown in [Figure 6-2](#).

Figure 6-2 Account Management Page

Telecomadmin Account Management

2. Configure the Telecomadmin Account Management parameters.

Table 6-1 lists the Telecomadmin Account Management parameters.

Table 6-1 Parameter Descriptions for the Telecomadmin Account Management

Parameter	Description
Username	The user name for the administrator privilege. The default user name of the administrator privilege is <code>admin</code> , which cannot be modified.
Old Password	The default passwords for the Administrator is <code>admin</code> .
New Password	Specify the new password.
Confirmed Password	Confirm the new password.

Admin Account Management

- Click **Admin Account Management** to open **Admin Account Management** page, as shown in Figure 6-3.

Figure 6-3 Admin Account Management Page

▼ Admin Account Management

The screenshot shows a web form titled "Admin Account Management". It contains three input fields: "Username" with the value "username", "New Password", and "Confirmed Password". At the bottom right, there are two buttons: "Apply" and "Cancel".

- Configure the Admin Account Management parameters.

Table 6-2 lists the Admin Account Management parameters.

Table 6-2 Parameter Descriptions for the Admin Account Management

Parameter	Description
Username	The user name for the user privilege. The default user name of the user privilege is <code>username</code> , which can be modified.
New Password	Specify the new password.
Confirmed Password	Confirm the new password.

- Click **Apply** button to apply the changes.

– End of Steps –

6.3 Configure the Login Timeout

This procedure introduces how to configure the login timeout.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Login Timeout** to go to the **Login Timeout** page.

The page is shown in [Figure 6-4](#).

Figure 6-4 Login Timeout Configuration Page

The screenshot shows the web interface for the Login Timeout configuration. At the top, there is a navigation bar with tabs: Home, Internet, Local Network, VoIP, and Management & Diagnosis. On the left, a sidebar menu lists various management options, with 'Login Timeout' highlighted. The main content area is titled 'Page Information' and contains a description: 'This page provides login timeout settings.' Below this, there is a section for 'Login Timeout' with a dropdown arrow. A form field labeled 'Timeout' contains the value '5' and is followed by 'min'. At the bottom right of the form, there are two buttons: 'Apply' and 'Cancel'.

2. Specify the time in the **Timeout** text box.
3. Click **Apply** button to apply the changes.

– End of Steps –

6.4 Configure the System Management

6.4.1 Configure the Device Management

This procedure introduces how to reboot the device or restore the factory default settings.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > System Management > Device Management** to go to the **Device Management** page.

The page is shown in [Figure 6-5](#).

Figure 6-5 Device Management Page

The screenshot shows the 'Management & Diagnosis' page with the 'Device Management' tab selected. The left sidebar lists various management options, with 'System Management' highlighted. The main content area includes a 'Page Information' section stating that the page provides device management features. Below this is a 'Reboot Management' section with a 'Reboot' button and a note that the operation will interrupt current business. A 'Reset Management' section is also visible below.

2. On this page, you can perform the following operations:
 - Click **Reboot** to reboot the ZXHN H267N device.
 - Click **Restore the default** to restore the factory default settings.

– End of Steps –

6.4.2 Upgrade Firmware

This procedure introduces how to upgrade Firmware.

Prerequisite

Before upgrading software, make sure that the upgrade file is ready.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > System Management > Firmware Upgrade** to go to the **Firmware Upgrade** page.

The page is shown in [Figure 6-6](#).

Figure 6-6 Firmware Upgrading Page

The screenshot shows the 'Firmware Upgrade' page. The left sidebar is the same as in Figure 6-5, with 'System Management' highlighted. The main content area has the 'Firmware Upgrade' tab selected. It includes a 'Page Information' section stating that the page provides upgrade features for the firmware file. Below this is a 'Firmware Upgrade' section with an information icon and the text 'The device will reboot after upgrading.' There is a text input field for selecting a new firmware image, a 'Browse' button, and an 'Upgrade' button.

2. Click **Browse** to select the upgrade version file.
3. Click **Upgrade**.

**Note:**

The system prompts the upgrade progress. During the upgrade process, do not cut off the power supply. Otherwise, the device may be damaged.

Generally, the software is upgraded by the ZTE CORPORATION engineers. If the user wants to upgrade the Firmware, contact the local office of ZTE CORPORATION to obtain the latest Firmware version.

– End of Steps –

6.4.3 Manage the User Configuration

This procedure introduces how to import or export the user configuration file.

User configuration refers to the customized configuration based on the factory defaults. The user can configure the device settings based on his own requirements, and the configuration can be backed up.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > System Management > User Config Management** to go to the **User Config Management** page.

The page is shown in [Figure 6-7](#).

Figure 6-7 User Configuration Management Page

The screenshot shows the web interface for the ZXHN H267N. At the top, there is a navigation bar with tabs: Home, Internet, Local Network, VoIP, and Management & Diagnosis. Below this, there is a sub-navigation bar with tabs: Device Management, Firmware Upgrade, and User Config Management. The 'User Config Management' tab is active. On the left side, there is a vertical menu with items: Status, Account Management, Login Timeout, System Management (highlighted), Mirror Configuration, TR-069, Log Management, Diagnosis, ARP Table, MAC Table, ETH Uplink Management, and IPv6 Switch. The main content area has a 'Page Information' section with the text: 'The page provides the backup and restore features of user configuration file.' Below this, there are two sections: 'User Configuration Backup' with a 'Backup Configuration' button, and 'User Configuration Restore'.

2. On this page, you can perform the following operations:
 - Click **Backup Configuration** to export the user configuration file.

- Click **Browse** to select the user configuration file, and then click **Restore Configuration** to restore the device to the user configuration.

**Note:**

After the user configuration file is imported, the system will restart.

– End of Steps –

6.5 Configure the Mirror

This procedure introduces how to perform the mirror configuration.

If the mirror configuration is performed, the packets at the **WAN** side will be copied to the specified **LAN** interface, and it can be used for the network analysis and troubleshooting.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Mirror Configuration** to go to the **Mirror Configuration** page.

The page is shown in [Figure 6-8](#).

Figure 6-8 Mirror Configuration Page

2. Configure the mirror parameters.

[Table 6-3](#) lists the Mirror Configuration parameters.

Table 6-3 Parameter Descriptions for the Mirror Configuration

Parameter	Description
Name	The name of the Mirror Configuration.

Parameter	Description
Source	Network-side WAN interface.
Destination	User-side LAN interface.

3. Click **Apply** button to apply the changes.

– End of Steps –

6.6 Configure the TR-069

The section describes how to configure the TR-069. **TR-069** provides the parameters of the TR-069 configuration features.

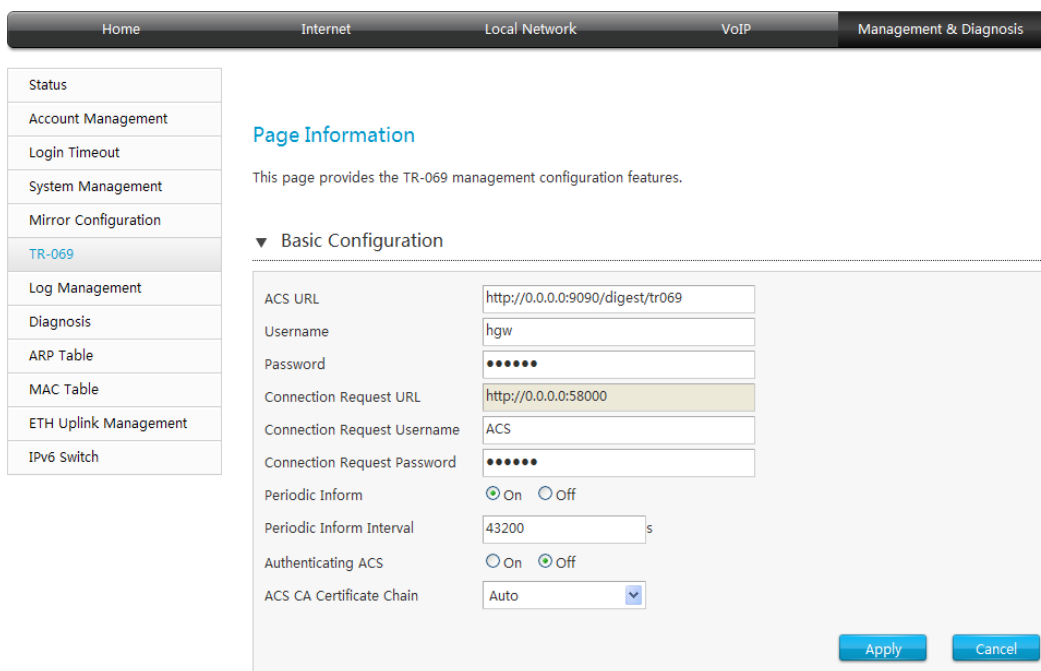

The relevant **TR-069** includes **Basic Configuration** and **Certificate Management**.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > TR-069** to go to the **TR-069** page.

The page is shown in [Figure 6-9](#).

Figure 6-9 TR-069 Configuration Page

Basic Configuration

2. Configure the basic TR-069 parameters.

[Table 6-4](#) lists the TR-069 basic parameters.

Table 6-4 Parameter Descriptions for the TR-069

Parameter	Description
ACS URL	The URL of the automatic configuration server that manages the device.
Username/Password	User name and password for the ZXHN H267N device to log in to the automatic configuration server.
Connection Request URL	Connection request URL, which is automatically generated by the system.
Connection Request Username/Connection Request Password	User name and password for the TR-069 connection authentication that the automatic configuration server provides when it logs in to the ZXHN H267N device.
Periodic Inform	Enable the periodic inform function.
Periodic Inform Interval	Periodic inform interval of the device (unit: second).
Authenticating ACS	Enable the TR-069 authenticating ACS.
ACS CA Certificate Chain	<ul style="list-style-type: none"> ● Auto: Automatically select the first chain certificate authentication or the second chain certificate authentication ● Chain1: The first chain certificate authentication ● Chain2: The second chain certificate authentication

3. Click **Apply** button to apply the changes.

Certificate Management

4. Click **Certificate Management** to open **Certificate Management** page, as shown in Figure 6-10.

Figure 6-10 Certificate Management

▼ Certificate Management

 The uploaded certificate will take effect only after the device reboot.

ACS Interactive Certificate

ACS CA Certificate Chain

Please select an ACS CA Certificate

Please select a Client Certificate

- 5. Click **Browse** to select the certificate file.

Note:

The **CA** certificate is provided by the **ISP** to the terminal user. It is imported from the local.

- 6. Click **Import Certificate**.
- End of Steps –

6.7 Manage the Log

This procedure introduces how to manage the log.

Steps

- 1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Log Management** to go to the **Log Management** page.

The page is shown in [Figure 6-11](#).

Figure 6-11 Log Management Page

2. Configure the log management parameters.

Table 6-5 lists the Log Management parameters.

Table 6-5 Parameter Descriptions for the Log Management

Parameter	Description
Save Log	Select this option to save logs.
Remote Log	Select this option, and the device regularly sends the log to the log server.

3. Click **Apply** button to apply the changes.
4. (Optional) Click **Cancel** button to exit without saving.
5. (Optional) Click **Clear** to clear the logs.
6. (Optional) Click **Download Log File** to download the log file from the log server.

– End of Steps –

6.8 Diagnosis

The section describes how to diagnosis. **Diagnosis** provides the parameters of the Diagnosis configuration features.

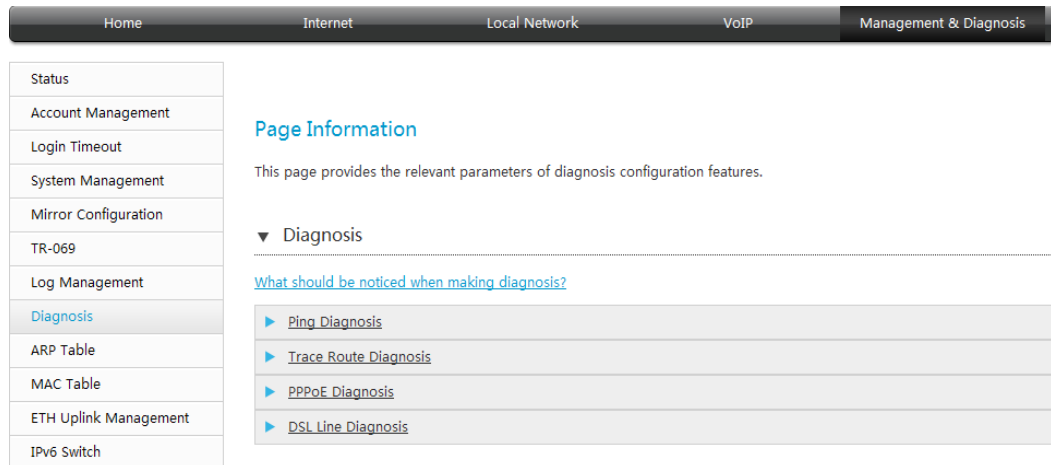

The relevant information includes **Ping Diagnosis**, **Trace Route Diagnosis**, **PPPoE Diagnosis** and **DSL Line Diagnosis**.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > Diagnosis** to go to the **Diagnosis** page.

The page is shown in [Figure 6-12](#).

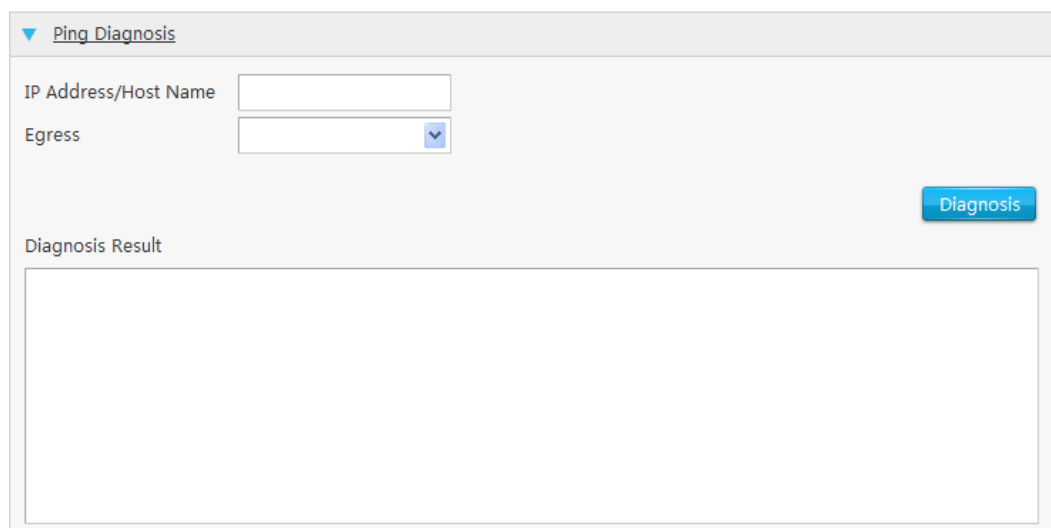

Figure 6-12 Diagnosis Configuration Page

Ping Diagnosis

2. Click **Ping Diagnosis** to open **Ping Diagnosis** page, as shown in [Figure 6-13](#).

Figure 6-13 Ping Diagnosis Page

3. Type the host **IP** address or host name in the **IP Address/Host Name** text box, select the **WAN/LAN** connection from the **Egress** drop-down list.
4. Click **Diagnosis** to diagnose the connection, and the system will display the following diagnosis results.

Trace Route Diagnosis

5. Click **Trace Route Diagnosis**.

The page is shown in [Figure 6-14](#).

Figure 6-14 Trace Route Diagnosis Page

6. Type the **IP** address or host name in the **IP Address/Host Name** text box, select one **WAN connection**, specify the **Maximum Hops**, **Wait time**, and **Protocol**.
7. After the configuration, click **Diagnosis**.

PPPoE Diagnosis

8. Click **PPPoE Diagnosis**.

The page is shown in [Figure 6-15](#).

Figure 6-15 PPPoE Diagnosis Page

Check PPPoE server connectivity	Fail
Check PPPoE server session	Fail
Check authentication with PPPoE server	Fail
Validate WAN assigned IP address	Fail
Validate WAN assigned DNS IP address	Fail
Validate WAN default gateway address	Fail

9. Select one **PPPoE connection**.

10. Click **Diagnosis** to check the [PPPoE](#) link.

DSL Line Diagnosis

11. Click **DSL Line Diagnosis**.

The page is shown in [Figure 6-16](#).

Figure 6-16 DSL Line Diagnosis Page

DSL Line Diagnosis

i This test can be used to check whether your Modem is properly connected to the Network. This test may take a few seconds to complete.

Test Type

VPI/VCI

Diagnosis

Diagnosis Result

12. Select the **Test Type** and **VPI/VCI**.
13. Click **Diagnosis** to diagnose the connection.

– End of Steps –

6.9 Check the ARP Table

The relevant information of [ARP](#) table is shown as below.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > ARP Table** to go to the **ARP Table** page, as shown in [Figure 6-17](#).

Figure 6-17 ARP Table Page

Home Internet Local Network VoIP Management & Diagnosis

Status
Account Management

Page Information

The relevant information of ARP table is shown as below.

▼ ARP Table

IP Address	MAC Address	Status	Interface
192.168.1.2	00:1e:90:3f:5c:39	Available	LAN

Refresh

2. Click **Refresh** button to refresh information.

– End of Steps –

6.10 Check the MAC Table

The relevant information of **MAC** table is shown as below.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > MAC Table** to go to the **MAC Table** page, as shown in Figure 6-18.

Figure 6-18 MAC Table Page

Home Internet Local Network VoIP Management & Diagnosis

The relevant information of MAC table is shown as below.

▼ MAC Table

Port	MAC Address	Active Time(s)
LAN1	00:1e:90:3f:5c:39	299.91

Refresh

2. Click **Refresh** button to refresh information.

– End of Steps –

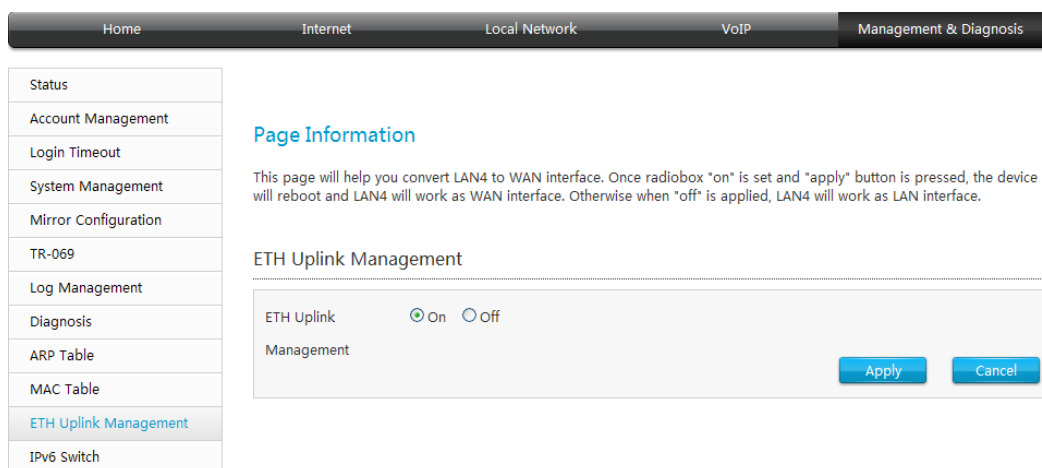

6.11 Configure the ETH Uplink Management

This page will help you convert LAN to WAN interface.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > ETH Uplink Management** to go to the **ETH Uplink Management** page, as shown in [Figure 6-19](#).

Figure 6-19 ETH Uplink Management Page

2. Once radio button **On** is set and **Apply** button is pressed, the device will reboot and will work as WAN interface. Otherwise, when **Off** is applied, the device will work as LAN interface.
3. Click **Apply** button to apply the changes.

– End of Steps –

6.12 Configure the IPv6 Switch

This page provides [IPv6](#) switch function.

Steps

1. On the main page of the ZXHN H267N, select **Management & Diagnosis > IPv6 Switch** to go to the **IPv6 Switch** page, as shown in [Figure 6-20](#).

Figure 6-20 IPv6 Switch Page

The screenshot shows a web management interface with a top navigation bar containing 'Home', 'Internet', 'Local Network', 'VoIP', and 'Management & Diagnosis'. On the left is a sidebar menu with items: Status, Account Management, Login Timeout, System Management, Mirror Configuration, TR-069, Log Management, Diagnosis, ARP Table, MAC Table, ETH Uplink Management, and IPv6 Switch (highlighted). The main content area has a 'Page Information' section stating 'This page provides IPv6 switch function.' Below it is a section titled 'IPv6 Switch' with a dropdown arrow. An information icon (i) is followed by two numbered instructions: '1. IPv6 switch change will take effect only after the device reboot.' and '2. Before switching off IPv6 function, please ensure that all related configuration parameters are set appropriately, such as IP address, WAN connection, etc.' Below the instructions, the 'IPv6 Switch' is set to 'On' with a radio button selected. The 'Current IPv6 Function Status' is also shown as 'On'. At the bottom right of the configuration area are 'Apply' and 'Cancel' buttons.

2. Select enable **IPv6 Switch** function.
3. Click **Apply** button to apply the changes.

– End of Steps –

This page intentionally left blank.
