# **Package Contents**

The following items should be present in your package:

- DG-BR1016NC 150Mbps Wireless Broadband Router
- Installation Guide CD (includes User Manual, OIG & Utility)
- · Ouick Installation Guide

Make sure that the package contains above items. If any of the listed items is damaged or missing, please contact your retailer immediately.

### **Product Overview**

DIGISOL DG-BR1016NC is a wall pluggable 150Mbps Wireless Multi-Function Broadband Router. It enables communication between wireless clients and the portable media connected to its USB port and also offers Internet connectivity to all the LAN users. The compact design makes it a perfect router to fit in a small space and plug directly into the power outlet of the residence/office. The router offers two USB ports, one for charging smart phones, tab or iPod and the other for data sharing.

DG-BR1016NC enhances multi-media streaming user experience on Apple/Android based phones and iPad/Tab using the DigiShare App. It uses the latest wireless IEEE802.11n technology to stream data at 150Mbps to its wireless clients. DG-BR1016NC is truly a Multi-Function and cost-effective solution for your home and small business environments.

### **Product Features**

- Wall pluggable & Compact design.
- Media sharing via USB interface.
- 3G connection sharing using a 3G dongle.
- USB interface for charging iPad/iPod/iPhone and Android/Smart phones.
- · Integrated internal antenna & power adapter.
- Wireless speed up to 150Mbps.
- · Robust WLAN security.
- · Wireless hotspot mode.
- DigiShare App for Apple iOS and Android phone/tab.

# **System Requirements**

The following system requirements are recommended.

- Personal Computer (PC/Notebook) with Wi-Fi enabled.
- IE 7 internet explorer or higher.
- An AC Power socket.

# Front View

Below shown is the product front view.

The following table describes the status of LED indicators on the front panel.

LED	Description
Green	DG-BR1016NC connected to Internet successfully
Orange	Flashing when DG-BR1016NC is not connected to Internet
Red	DG-BR1016NC is booting up

### Router Interface's

The following table describes the router interfaces.

Here, you will see the log information.

Click on 'Reboot' to reboot the router. Once router reboot is done click 'Exit' to finish the installation

Congratulations! The Wireless Router installation is now complete.

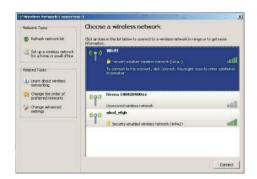

# Connect to the Wi-Fi network Wirelessly

Users must configure their wireless notebook/desktop computer in order to establish a wireless connection to the wireless router. The following instructions help in establishing a wireless connection between a Windows XP computer and the Wireless Router.

 Right click the wireless icon in the system tray and click on "View Available Wireless Networks".

 A window displaying the available wireless networks will open. Select the wireless network you wish to connect and then click on 'Connect'.

• Enter the network security key if the wireless network you wish to connect has wireless encryption enabled. Click 'Connect'. The connection should now get established.

# Web Management Of the router

- To access the web configuration of the Router, assign a static IP address to your notebook/desktop computer in the subnet 192.168.2.X with the subnet mask 255.255.255.0 and gateway as 192.168.2.1. For example, assign the IP address 192.168.2.10.
- Open a web browser and enter "http://192.168.2.1" in the address bar and press 'Enter'. A login screen will appear, assign username as "admin" and password as "1234". Press 'OK' to Log in.

 Following screen will appear on successful Login. You can now configure the Router through this web management page.

# **Frequently Asked Questions**

Following are the solutions to problems that may occur during the installation and operation of the DIGISOL DG-BR1016NC Wireless Router.

- 1. Cannot get connected to wireless router.
  - If encryption is enabled, please re-check WEP or WPA pass-phrase settings on your wireless client.
  - Try to move wireless client closer to the wireless router.
  - Unplug the wireless router from the power socket, and plug it again after 10 seconds.
  - If the LED on wireless router is OFF, then ensure that it's correctly powered ON.

- If still device is not accessible, reset it using the reset button. Press and hold the reset button for 10 seconds to reset the Wireless Router to factory default (The LED will flash and turn RED in color if the device is restoring to factory default).
- 2. Wireless client cannot locate the SSID of the wireless router.
  - Verify whether 'Broadcast ESSID' is set to off in router's web configuration.
  - Is your wireless client far away from your router? Try to get closer to the router.
  - Ensure that you input ESSID on your wireless client manually, if ESSID broadcast is disabled.
