

Zonnet[®]

ZSR4124WE

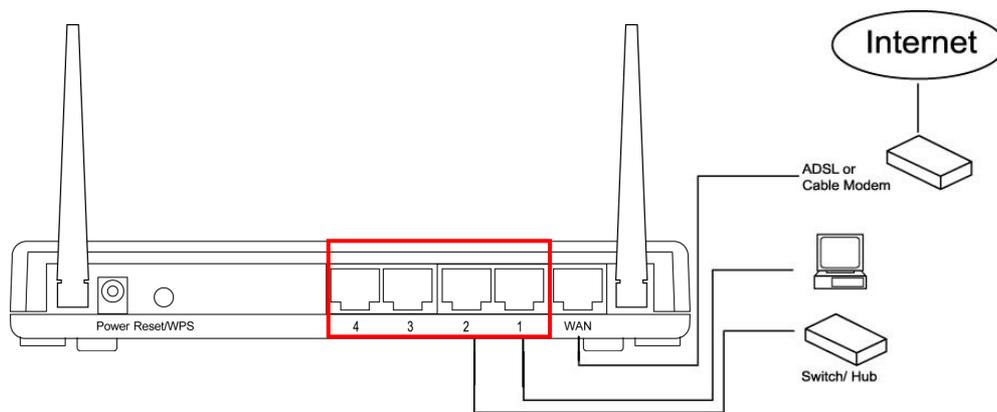

802.11n **Wireless** Broadband Router

Quick Installation Guide

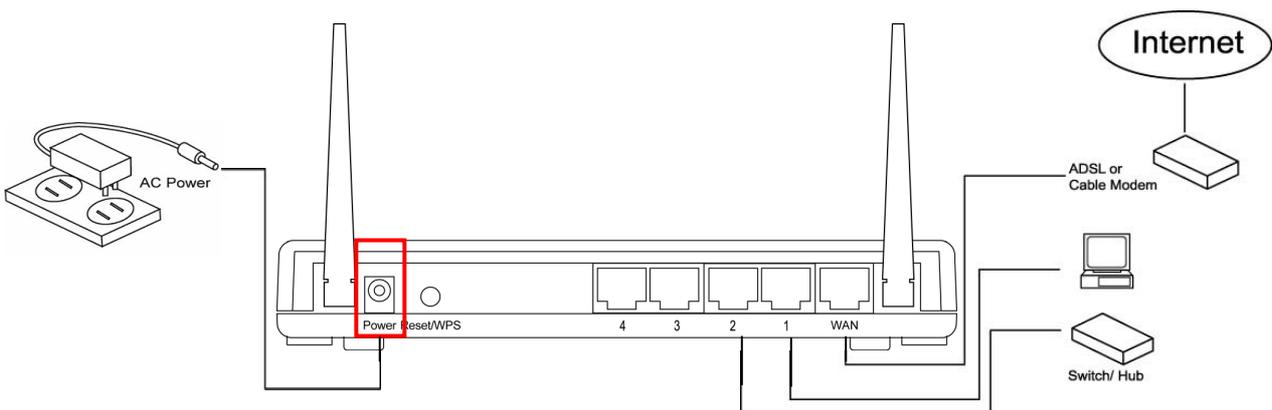

1. Build network connection

Please follow the following instruction to build the network connection between your new WIRELESS router and your computers, network devices:

- Connect your xDSL / cable modem to the WAN port of router by Ethernet cable.
- Connect all your computers, network devices (network-enabled consumer devices other than computers, like game console, or switch / hub) to the LAN port of the router.

- Connect the A/C power adapter to the wall socket, and then connect it to the "Power" socket of the router.

- Please check all LEDs on the front panel. "PWR" LED should be steadily on, WAN and LAN LEDs should be on if the computer / network device connected to the respective port of the router is powered on and correctly connected.

Front Panel

LED Name	Light Status	Description
PWR	On	Router is switched on and correctly powered.
WLAN	On	Wireless WPS function is enabled.
	Off	Wireless network is switched off.
	Flashing	Wireless LAN activity (transferring or receiving data).
WAN 10/100M	On	WAN port (Internet) is running at 100Mbps.
	Off	WAN port (Internet) is running at 10Mbps.
	Flashing	WAN activity (transferring or receiving data).
WAN LNK/ACT	On	WAN port is connected.
	Off	WAN port is not connected.
	Flashing	WAN activity (transferring or receiving data).
LAN 10/100M	On	LAN port is running at 100Mbps.
	Off	LAN port is running at 10Mbps.
LAN LNK/ACT	On	LAN port is connected.
	Off	LAN port is not connected.
	Flashing	LAN activity (transferring or receiving data).

2. PC Setup

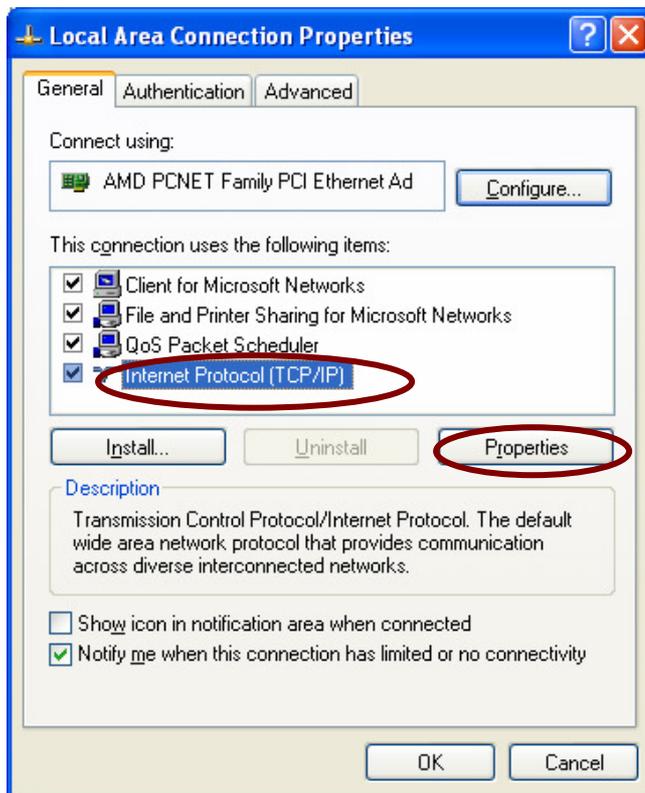

Before you can connect to the router and start configuration procedures, your computer must be able to get an IP address automatically (use dynamic IP address). If it's set to use static IP address, or you're unsure, please follow the following instructions to configure your computer to use dynamic IP address:

2-1. Windows IP address setup:

Windows 2000/XP

- Click "Start" button (it should be located at lower-left corner of your computer), then click control panel. Double-click **Network and Dial-up Connections** icon;

click **Local Area Connection**, and **Local Area Connection Properties** window will appear. Select "Internet Protocol (TCP/IP)" and then click "Properties"

- Select "Obtain an IP address automatically" and "Obtain DNS server address automatically"; then click "OK".

Windows Vista

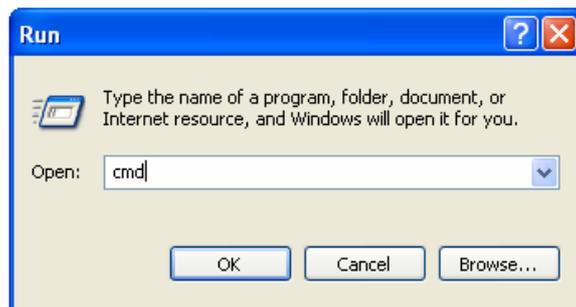

- Click "Start" button (it should be located at lower-left corner of your computer), then click control panel. Click **View Network Status and Tasks**, and then click **Manage Network Connections**. Right-click **Local Area Network**, then select **"Properties": Local Area Connection Properties** window will appear, select "Internet Protocol Version 4 (TCP / IPv4), and then click "Properties"
- Select "Obtain an IP address automatically" and "Obtain DNS server address automatically"; then click "OK".

2-2. Router IP address lookup

After the IP address setup is complete, please click “start” -> “run” at the bottom-lower corner of your desktop:

Input “cmd”, then click “OK”

Input “ipconfig”; then press “Enter” key. Please check the IP address followed by “Default Gateway” (In this example, the IP address of router is 192.168.2.1, **please note that this value may be different.**)

```
C:\WINDOWS\system32\cmd.exe
C:\>ipconfig
Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . : 
    IP Address . . . . . : 192.168.2.3
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.2.1

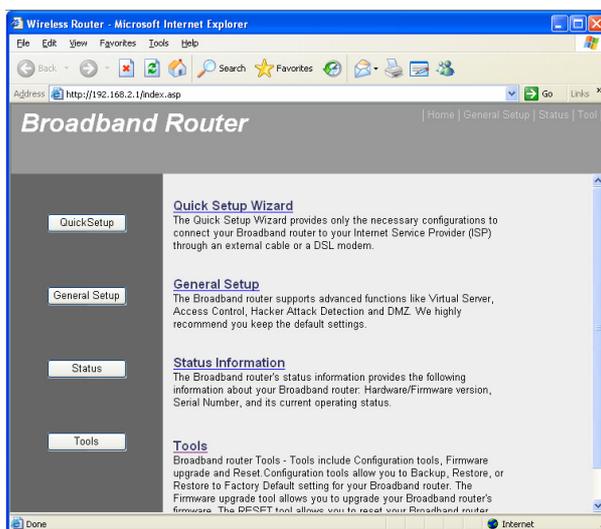

C:\>_
```

NOTE: If the IP address of Gateway is not displayed, or the address followed by “IP Address” begins with “169”, please recheck network connection between your computer and router, and / or go to the beginning of this chapter, to recheck every step of network setup procedure.

After your computer obtained an IP address from router, please start your web browser, and input the IP address of router in address bar. The following message should be shown:

Please input user name and password in the field respectively, default user name is “**admin**”, and default password is “**1234**”, then press “OK” button, and you can see the web management interface of this router:

TIP: This page shows the four major setting categories: QuickSetup, General Setup, Status, and Tools. You can find the shortcut which leads to these setting categories at the upper-right corner of every page, and you can jump to another category directly by clicking the link, and don't have to go back to the first page.

2-3. Using “Quick Setup”

This router provides a “Quick Setup” procedure, which will help you to complete all required settings you need to access the Internet in very short time.

Please go to QuickSetup menu by clicking “QuickSetup” button, and select time zone of area where you live, then click next.

● Broadband Type

Broadband Type

Specify the WAN connection type required by your Internet Service Provider. Specify a Cable modem, Fixed-IP xDSL, PPPoE xDSL or PPTP xDSL connection.

Cable Modem

A connection through a cable modem requires minimal configuration. When you set up an account with your Cable provider, the Cable provider and your Broadband router will automatically establish a connection, so you probably do not need to enter anything more.

Fixed-IP xDSL

Some xDSL Internet Service Providers may assign a Fixed IP Address for your Broadband router. If you have been provided with this information, choose this option and enter the assigned IP Address, Subnet Mask, Gateway IP Address and DNS IP Address for your Broadband router.

PPPoE xDSL

If you connect to the Internet using an xDSL Modem and your ISP has provided you with a Password and a Service Name, then your ISP uses PPPoE to establish a connection. You must choose this option and enter the required information.

PPTP xDSL

If you connect to the Internet using an xDSL Modem and your ISP has provided you with a Password, Local IP Address, Remote IP Address and a Connection ID, then your ISP uses PPTP to establish a connection. You must choose this option and enter the required information.

L2TP xDSL

Layer Two Tunneling Protocol is a common connection method used in xDSL connections.

Telstra Big Pond

If your Internet service is provided by Telstra Big Pond in Australia, you will need to enter your information below. This information is provided by Telstra BigPond.

Please choose the broadband (Internet connection) type you’re using in this page. If you’re not sure, please contact your Internet service provider.

2-4. Setup Internet Connection (WAN Setup)

To start configuration, please follow the following instructions:

- Please click “WAN” menu on the left of web management interface, and the following message will be displayed on your web browser:
- Please select an Internet connection method depend on the type of connection you’re using. You can either click the connection method on the left or right. If you select the connection method on the right, please click “More Configuration” button after a method is selected.

WAN Settings

The Broadband router can be connected to your Service Provider through the following methods

- Dynamic IP Obtains an IP Address automatically from your Service Provider.
- Static IP Uses a Static IP Address. Your Service Provider gives a Static IP Address to access Internet services.
- PPPoE PPP over Ethernet is a common connection method used in xDSL connections.
- PPTP Point-to-Point Tunneling Protocol is a common connection method used in xDSL connections.
- L2TP Layer Two Tunneling Protocol is a common connection method used in xDSL connections.
- Telstra Big Pond Telstra Big Pond is a Internet service is provided in Australia.

[More Configuration](#)

2-4-1. Setup procedure for “Dynamic IP”

Dynamic IP ?

The Host Name is optional, but may be required by some Service Providers. The default MAC Address is set to the WAN physical interface on the Broadband router. If required by your Service Provider, you can use the 'Clone MAC Address' button to copy the MAC Address of the Network Interface Card installed in your PC and replace the WAN MAC Address with this MAC Address.

Host Name :	<input type="text"/>
MAC address :	<input type="text" value="000000000000"/>

Please input host name of your computer, this is optional, and only required if your service provider asks you to do so. Please input MAC address of your computer, if your service provider only permits computer with certain MAC address to access internet. If you're using the computer which used to connect to Internet via cable modem, you can simply press "Clone Mac address" button to fill the MAC address field with the MAC address of your computer, after you finish with all settings, please click "Apply"

2-4-2. Setup procedure for “Static IP”

Static IP ?

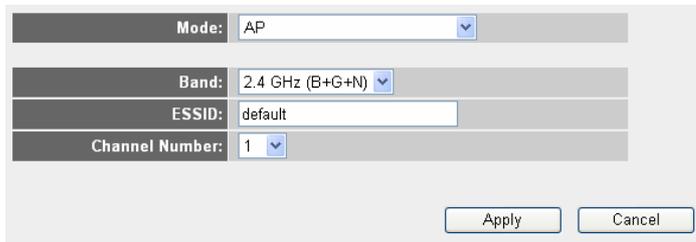

If your Service Provider has assigned a Fixed IP address; enter the assigned IP Address, Subnet Mask and the Gateway IP Address provided.

IP address assigned by your Service Provider :	<input type="text" value="192.168.1.10"/>
Subnet Mask :	<input type="text" value="255.255.255.0"/>
Service Provider Gateway Address :	<input type="text" value="192.168.1.254"/>

Please input IP address/ subnet mask/ Gateway Address assigned by your service provider.

2-5. Basic Wireless Settings

Please click “Wireless” menu on the left of web management interface, then click “Basic Settings”, and the following message will be displayed on your web browser:

Mode:	AP
Band:	2.4 GHz (B+G+N)
ESSID:	default
Channel Number:	1

Apply Cancel

This wireless router can be work in 6 modes:

- AP: Standard wireless AP (access point).
- Station-Infrastructure: Configure the router to Ethernet device such us TV, Game player, HDD&DVD to enable the Ethernet device be a wireless station.
- AP Bridge-Point to Point: Connect this router with another wireless router, to expand the scope of network.
- AP Bridge-Point to Multi-Point: Connect this router with up to four other wireless routers, to expand the scope of network.
- AP Bridge-WDS: Connect this router with up to four WDS-capable wireless routers, to expand the scope of network.
- Universal Repeater: The router can act as Station and AP at the same time. It can use Station function to connect to a Root AP and use AP function to service all wireless stations within its coverage.

3. Checking the Connection to the Internet

To check the connection to the Internet, you can open the Web browser and go to a website. For more information about the router, please refer to User Manual of in supplied document CD-ROM..
